

Poison Centre Notifications (CLP Art. 45)
Huntsman's Simple & Efficient Solution using SAP EHS Product Safety

Alain Van den Broeck, Huntsman
Jayne Clifton, Huntsman
John Falk, opesus

Session ID # 83543

Agenda

1 **Huntsman & opesus Introduction**

2 CLP Article 45 Regulation

3 opesus EHS Product Notification

4 Lessons Learned / Best Practices

Huntsman

Multi-national Company with sites around the globe

- Global manufacturer of chemicals you use every day. Markets served include: transportation, home life, construction, energy and fuels, clothing and footwear
- 50 years, located in more than 100 countries
- 4 Divisions:
 - Polyurethanes
 - Performance Products
 - Advanced Materials
 - Textile Effects

Huntsman businesses

POLYURETHANES

MDI
Polyols
PO/MTBE
TPU
PU Systems

PERFORMANCE PRODUCTS

Amines
Surfactants
Maleic Anhydride
Upstream Intermediates

ADVANCED MATERIALS

Composites
Adhesives
Resins

TEXTILE EFFECTS

Dyes
Chemicals
Inks
Apparel
Home & Institutional
Technical Textiles

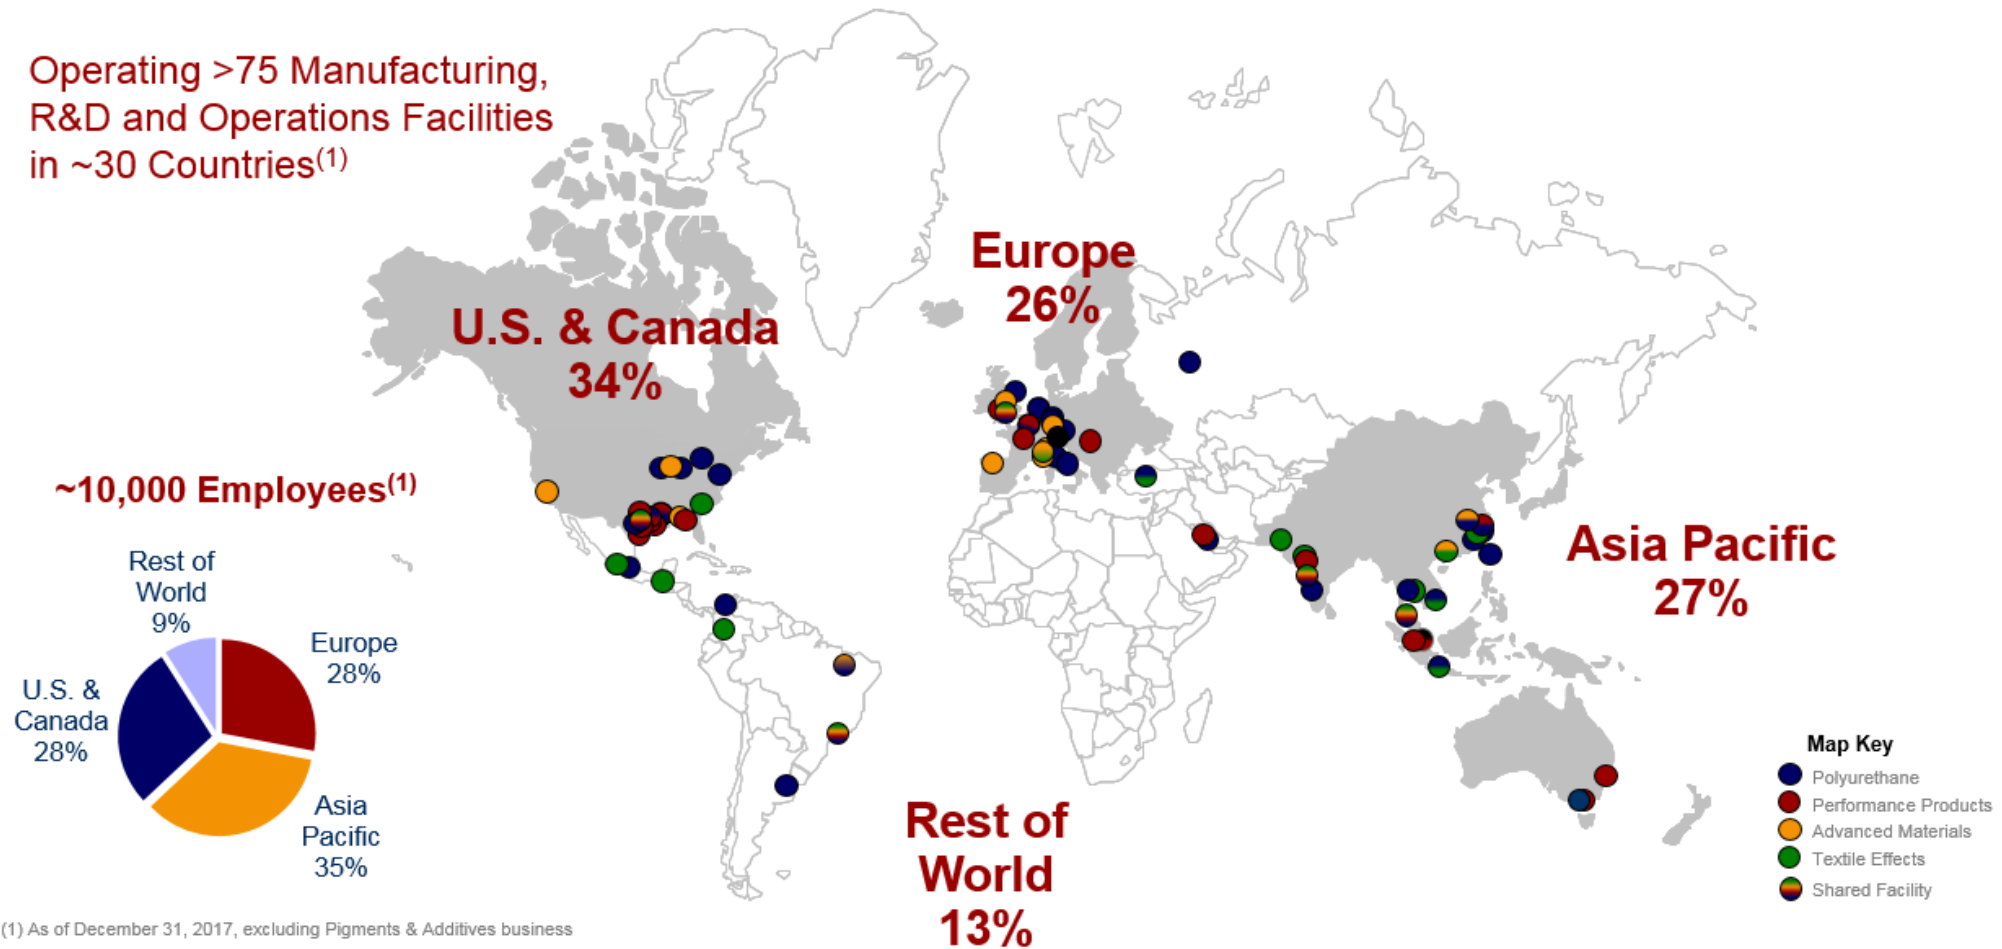

Huntsman

Multi-national Company with sites around the globe

Enriching lives through innovation

Operating >75 Manufacturing, R&D and Operations Facilities in ~30 Countries⁽¹⁾

(1) As of December 31, 2017, excluding Pigments & Additives business

Huntsman – SAP EHS implementation

Why SAP EHS? The implementation story...

- Project GAIA (Huntsman's project name) was a strategic project to replace Product EHS IT systems with SAP EHS for
 - Hazard communication and label printing
 - Regulatory compliance (Substance Volume Tracking)
 - Dangerous goods transport compliance
- The project leveraged standard work processes and standard SAP functionality to maximize efficiency of PEHS services
 - Provided a foundation for future EHS initiatives
 - Stay close to standard – minimal bespokes

Data implementation

- 30,000+ Real substances
- 9,000 Pure substances

opesus makes SAP Sustainability Solutions work!

Consulting

Strategy
Design
Implementation
Knowledge Transfer

Custom Development

Our unique strength:
deep SAP software
development expertise

Solutions

Solutions to complement
and enhance SAP
sustainability solutions

Agenda

- 1 Huntsman & opesus Introduction
- 2 CLP Article 45 Regulation**
- 3 opesus EHS Product Notification
- 4 Lessons Learned / Best Practices

ASUG

Current Situation and Key Issues

Poison Centre Data + EU = Many Formats!

- Different formats and ways to report in almost every member state
- Formats include XML, Excel, CDs, PDFs, and Word forms...
- Companies have to report similar information multiple times
- Different information is required: e.g. exact composition, only hazardous components, additional product data in some countries required
- As a result different information available for medical personal in case of an emergency

EU Poison Centre Notification – PCN Format

CLP Regulation (EC) No. 1272/2008 – Article 45

- Member states shall appoint bodies that receive information relevant for emergency health response
- Affects “*importers and downstream users*” that place **hazardous mixtures** on the market
- Establish a “*common format for the electronic submission*”

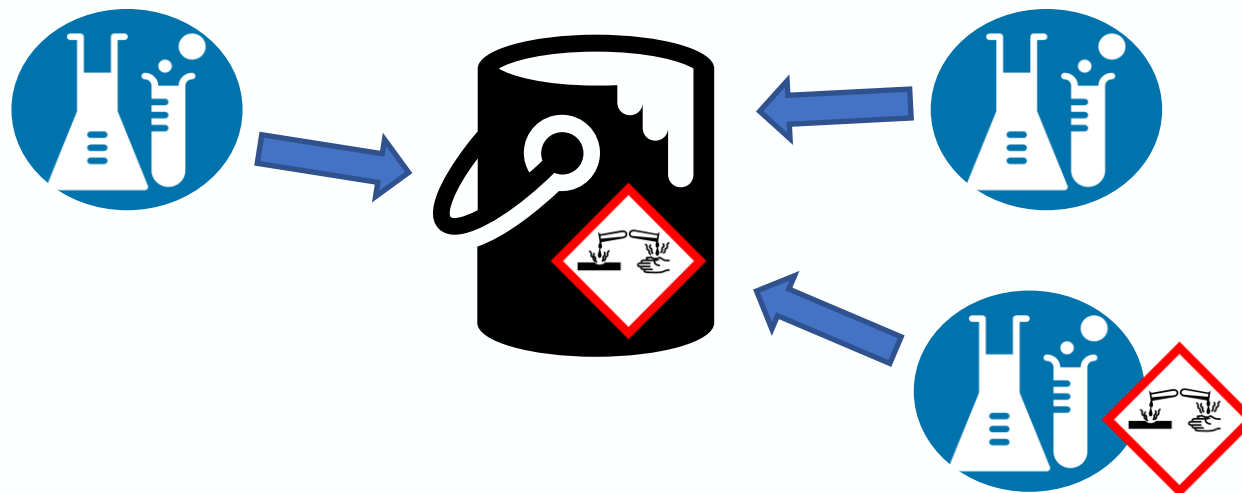

What needs to be notified?

Mixtures that are **placed on the EU market** and classified as *hazardous* based on their *health* or *physical* effects

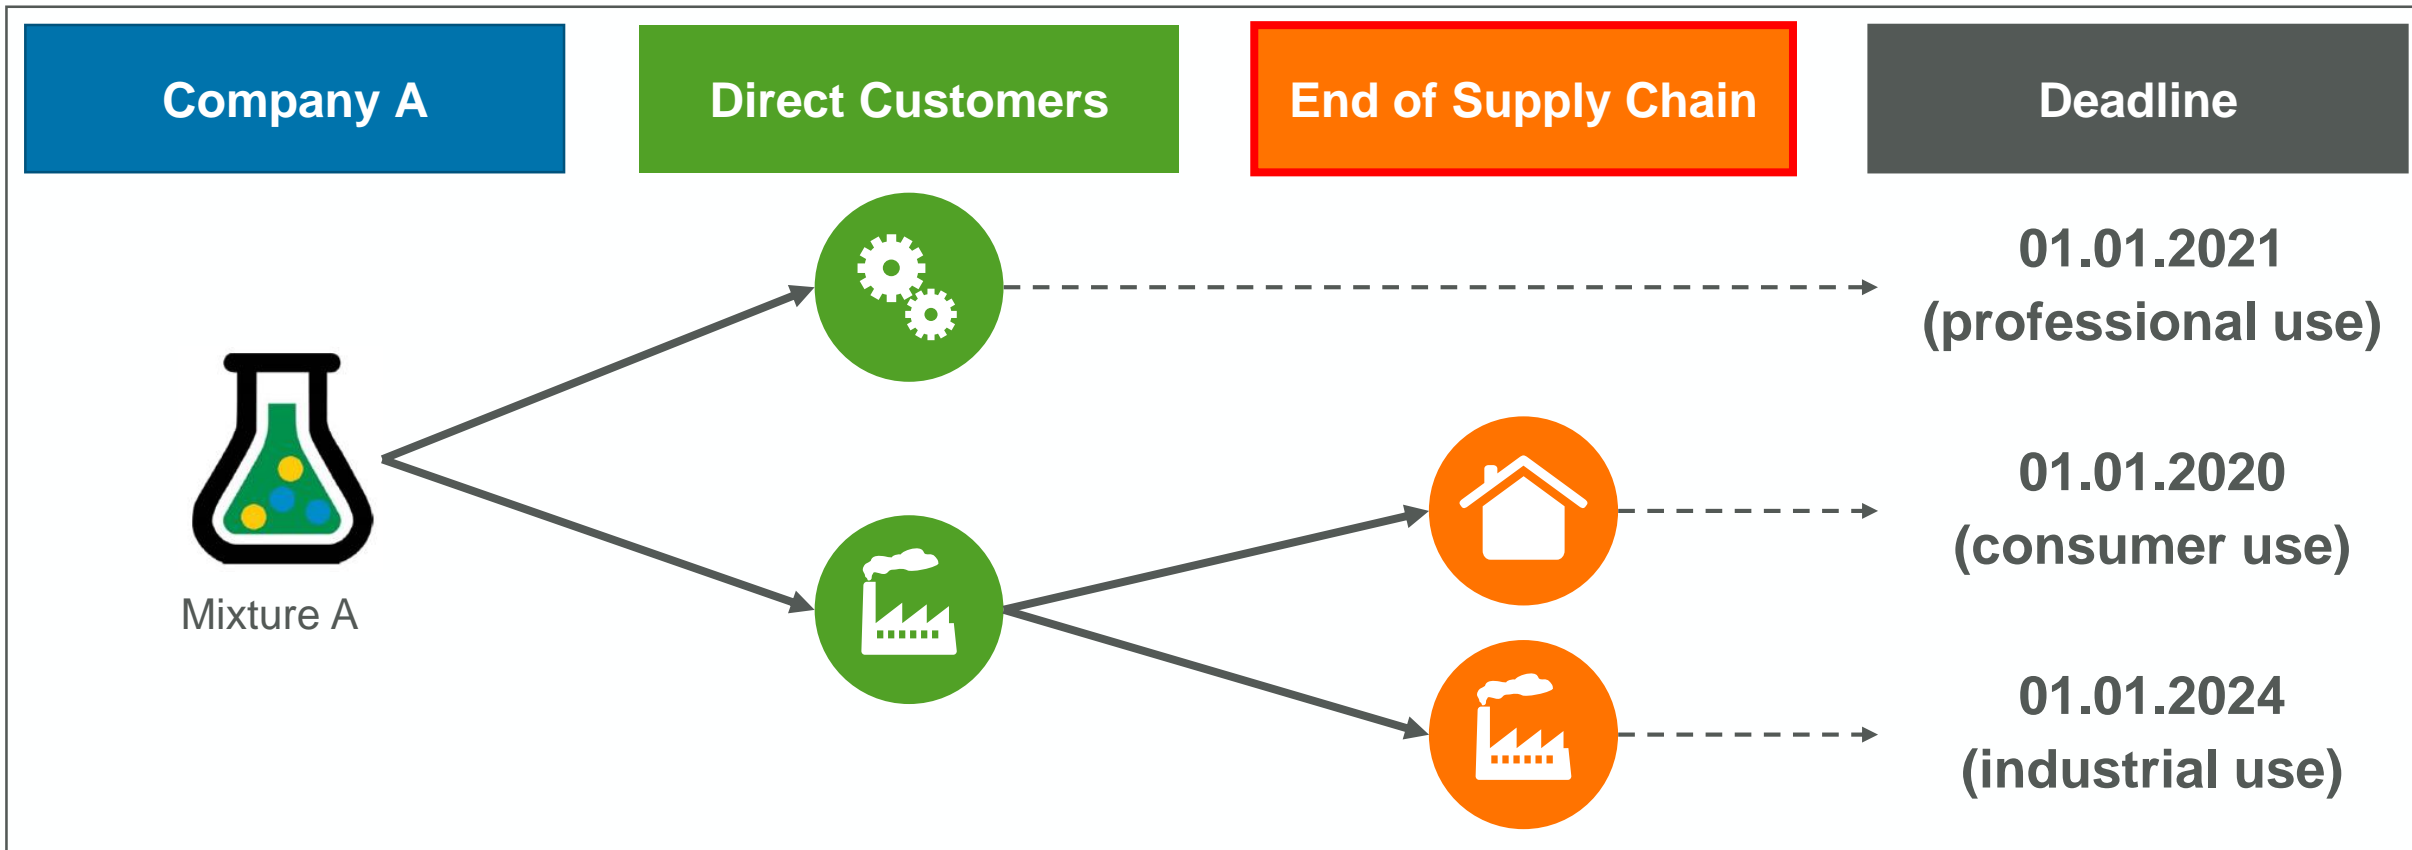

Exemptions: R&D, mixtures only classified as gases under pressure or explosives

Unique Formula Identifier (UFI) required for notification for each mixture and must be printed on the safety data sheet and on the product label

Notification must be accepted before product can be placed on the market

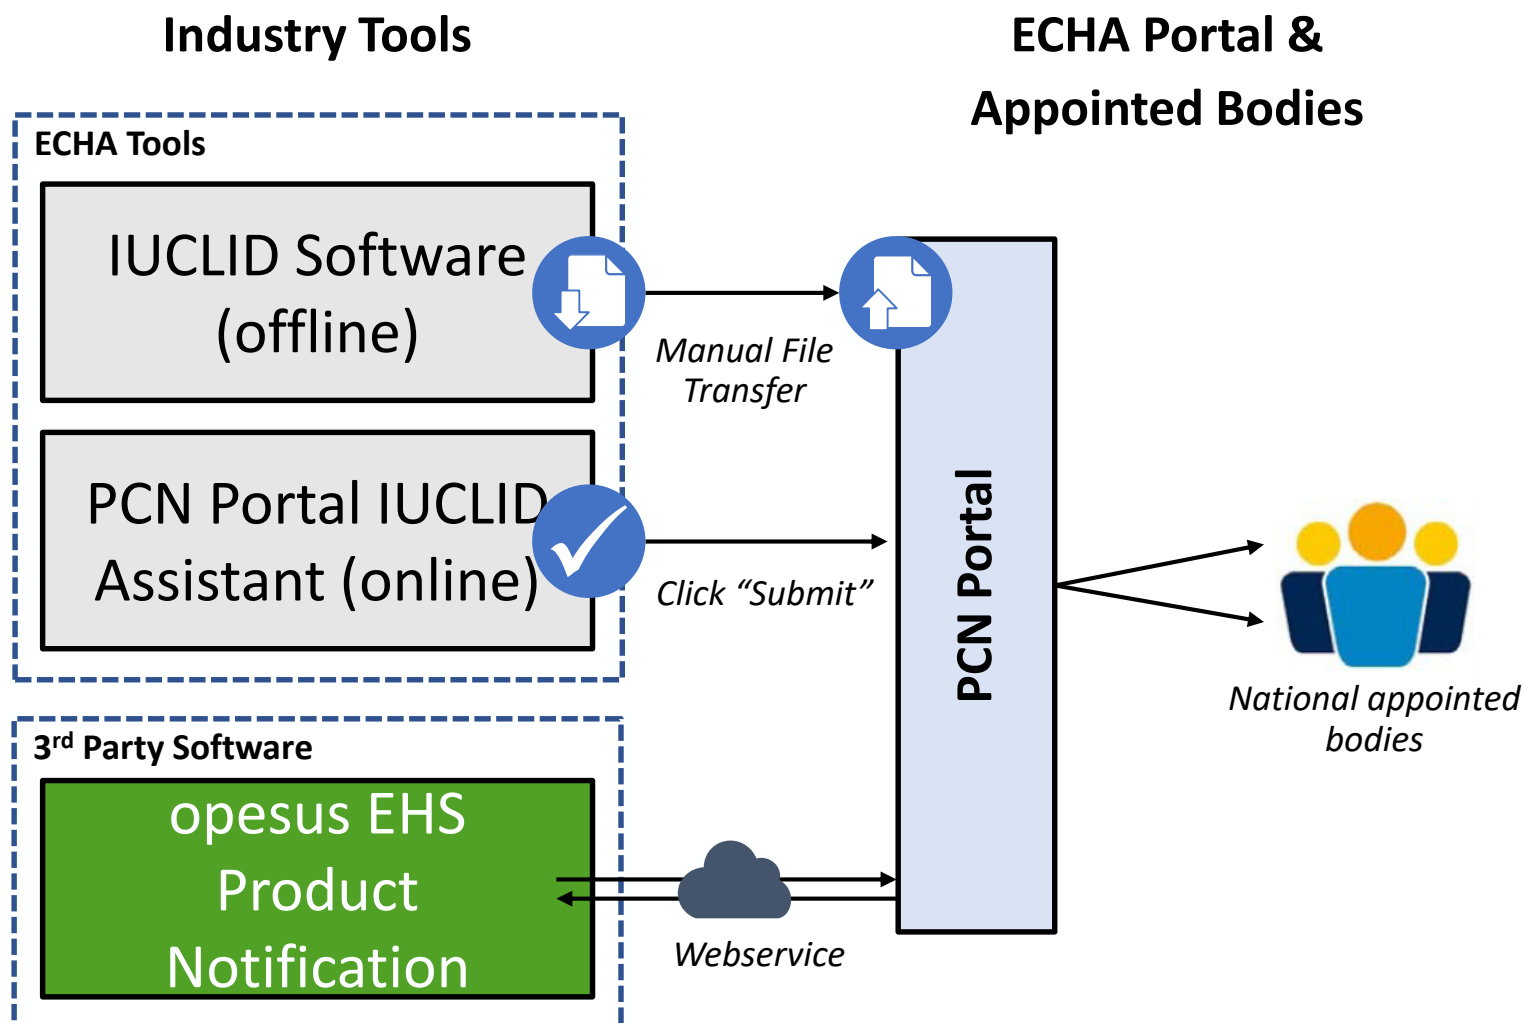

Deadlines for Poison Centre Notification

Verify your assumptions about end use of your mixtures throughout the supply chain. Several companies were surprised where their mixtures ended up. An earlier deadline might apply to you!

How to Create Poison Centre Notifications

Agenda

- 1 Huntsman & opesus Introduction
- 2 CLP Article 45 Regulation
- 3 opesus EHS Product Notification**
- 4 Lessons Learned / Best Practices

Challenges: Old (BfR) Format vs. New (PCN) Format

	BfR-Format	PCN-Format
Templates / Format Definition	1 xsd	27 xsd (17 represent IUCLID documents)
# Files in one Notification	One XML	> 10 XMLs, packed as .i6z file
Lines of XML Code for simple* example	~ 150	~ 1,500

* Two substances; no "special" cases

10x

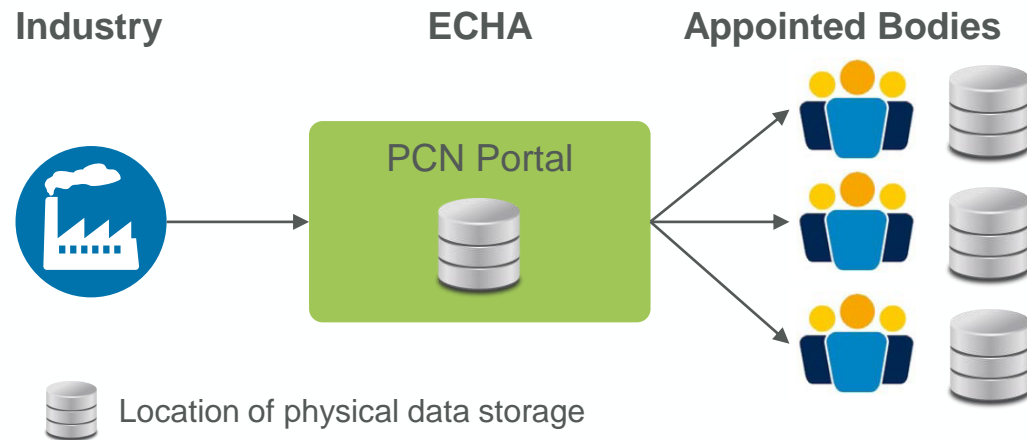

Required Information in SAP EHS System

Information	Available		SAP System	Comment
Mixture Composition	New	✗	PCN Composition	Full composition required!
UFI	New	✗	Spec. Property / EPN	Strategy on product and labelling required
Product, Trade Names	Yes	✓	Spec. / Material	Multiple sources e.g. Sales Text, Short Text.
Packaging	Indirect	▶	Material, BOM, others	Can be determined from different sources
Classification & Labeling	Yes	✓	Spec. Property	Typically available in SAP EHS
Toxicological Information	Yes	✓	Spec. Properties	Typically available in SAP EHS
Color	Yes	✓	Spec. Property	Typically available in SAP EHS
pH-Value	Yes	✓	Spec. Property	Check if pH is detailed enough!

Maintaining the PCN Composition

Data Security is Central

- Exact composition is highly **confidential business information**
- Potential risk of data breach
- CLP regulation allows stating **concentration ranges** within specific ranges

Solution:

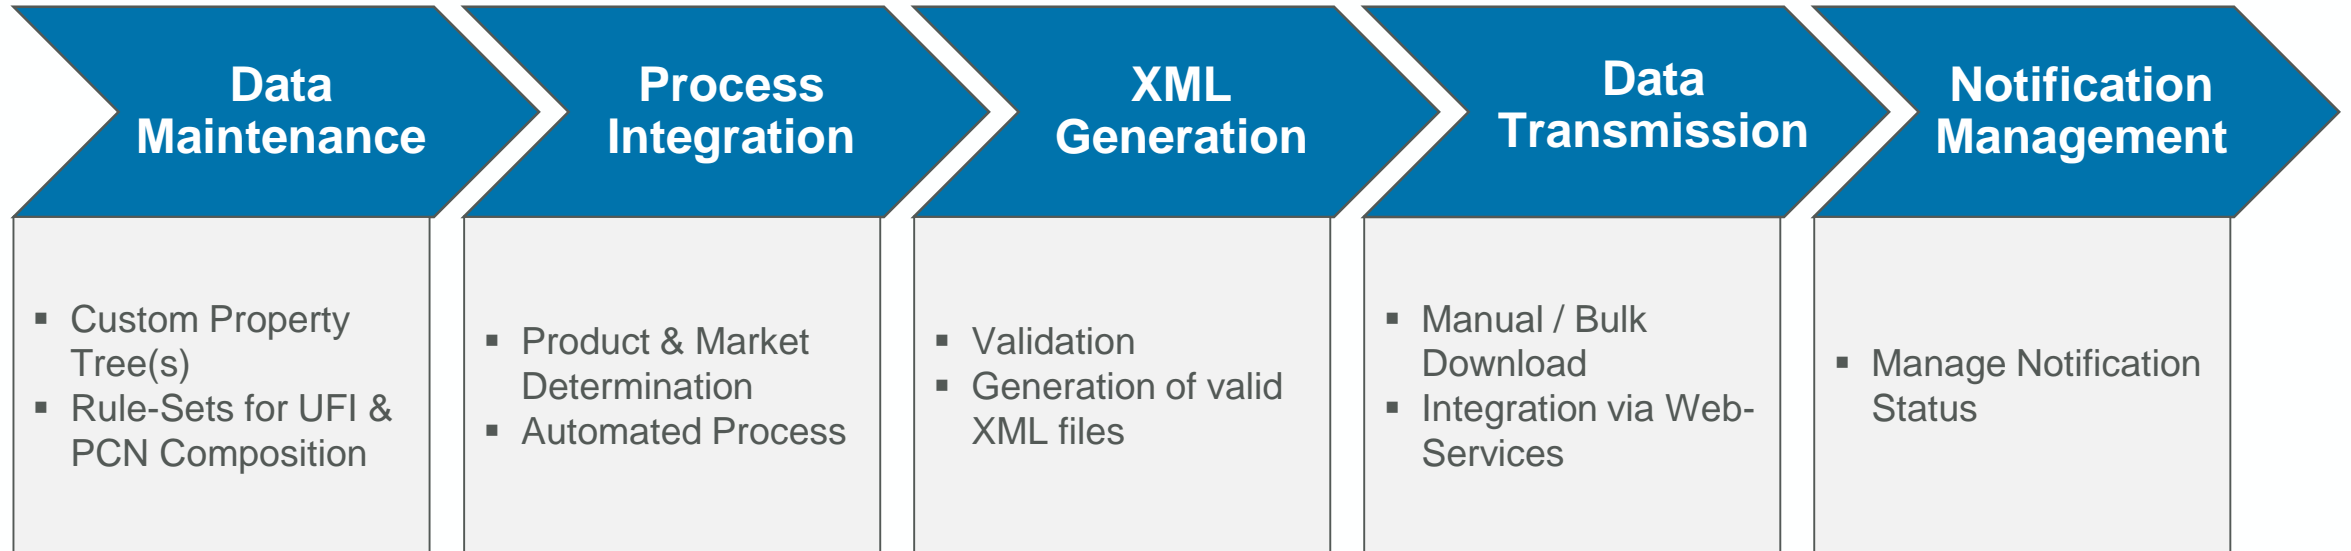

- Basic concept: ABAP **Ruleset** that validates, calculates and writes PCN composition
- Highly configurable
- Can **automatically randomize** a composition within allowed ranges
- Can be triggered together with standard rulesets

The screenshot shows the SAP ABAP Composition Ruleset configuration interface. The 'Composition' tab is active, displaying a table of rules. The table columns include Ref. quantity, W/W, Weight, Sort Spec., Identifier, UoM, Op, Lower Limit, and Op Upper Limit. The rules are for various substances, with their concentration ranges highlighted in red boxes.

Ref. quantity	W/W	Weight	Sort Spec.	Identifier	UoM	Op	Lower Limit	Op	Upper Limit
1	L00000000028	7789-00-6	potassium chromate						
/OPE/SU_	Substance				%	>=	36,8370	-	<= 54,8370
2	L00000000034	109-86-4	2-methoxyethanol						
/OPE/SU_	Substance				%	>=	2,6877	-	<= 11,7877
3	L00000000057	9016-87-9	Diphenylmethandisocyanate						
/OPE/SU_	Substance				%	>=	35,0000	-	<= 40,0000
4	L00000000092	94246-91-0	(2-ethylhexanoato-O)(isononanoato-O)lead						
/OPE/SU_	Substance				%	>=	0,3248	-	<= 1,2248

Functional Overview

EPN covers the end-to-end Process of Product Notifications

Additional Benefits

Inside SAP EH&S

Product is delivered entirely in customer's SAP EH&S

Out-of-the Box Customizing

Initial installation to fit customer-specific needs

High Flexibility

Enabling customer specifics without modification of software

Agenda

- 1 Huntsman & opesus Introduction
- 2 CLP Article 45 Regulation
- 3 opesus EHS Product Notification
- 4 Lessons Learned / Best Practices**
 - 4.1 Why opesus EHS Product Notification tool for PCN?
 - 4.2 Best Practices Along the Notification Process
 - 4.3 Know Your Obligations

Why opesus EHS Product Notification tool for PCN?

- Support for Poison Centre Notification

- SAP did not have the intention to build a tool to support this
- Huntsman also did not have intention to develop bespoke tool
 - Stay as close as possible to SAP standard
 - Additional module from SAP/SAP partner

- opesus EHS Product Notification

- Plug-in for SAP EHS Substance Workbench
- Close to SAP standard - uses existing data in SAP EHS to create notifications with minimal effort
- Good fit out of the box
 - Various configuration possibilities offered, to fit your customer specific data model (commercial product name, compositions, phrases, ..)

- Commitment from opesus to continuously maintain and update EHS Product Notification tool, and support new features in the future

- E.g. automated submission from SAP to ECHA PCN Portal

Best Practices Along the Notification Process

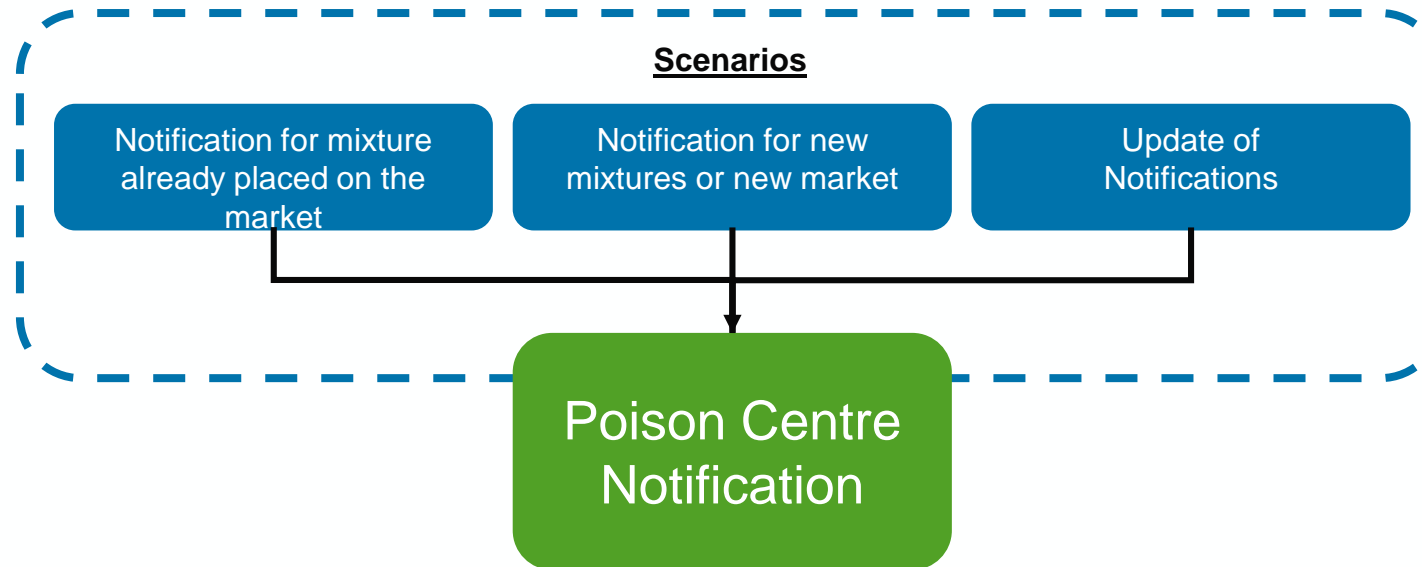

Confidentiality: Communication and Submission Strategies

- **Communicate UFI instead of Composition**
 - Communicate UFI of your mixture to your customers instead of disclosing full composition
- **Consider ‘on behalf’ Submission**
 - Consider ‘on behalf’ submission as distributor to protect your market insight
- **Submit Country Specific**
 - Country specific submissions help to control submission costs

Best Practices Along the Notification Process

Notification Update Scenarios – when to notify?

Recommendation

Submit to ECHA Portal instead of National Systems

- Only one submission path instead of many national entities
- UFI is known in ECHA system **and** in national system. If you submit only to your national system and your UFI is part of a customer Mixture in Mixture (MiM). Your customer's MiM validation would fail in the ECHA portal as the UFI would not be known there
- opesus EPN automates the process for notification updates
 - E.g. update of composition, product name, ...

Best Practices Along the Notification Process

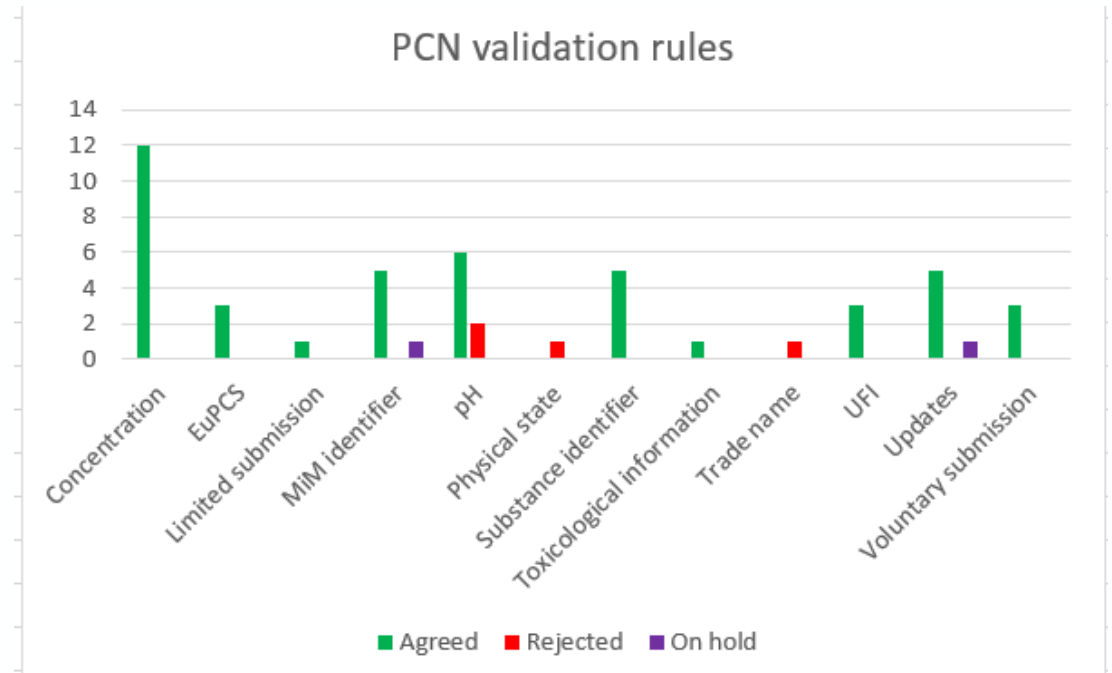

Notification Generation: Validation Rules

PCN validation rules

- Warning / Error flag: 44 business validation rules
→ 28 rules could lead to notification submission failure
- Examples:
 - Composition below 70%
 - Invalid UFI

Recommendation

- It is advisable to **use a software tool that also checks according to PCN validation rules** to prevent unnecessary submission failures
- Check data values (e.g. pH)**. You might need to test some of your products to get more accurate pH values. Or request details from your supplier
- The PCN rule set can help you **identify gaps in your composition**.

Know Your Obligations

Legal Obligations CLP Article 45 Annex VII

Who is required to submit?

Importer

Downstream User

What is in scope?

Mixtures placed on EEA market, classified as hazardous (health or physical effects)

When does it start?

1.1.2020 Consumer Use

1.1.2021 Professional Use

1.1.2024 Industrial Use

Know Your Obligations

Recommendations

Check the roles you have in PCN:

- Do you have the legal obligation to submit?
- Which timeline applies to your notification?

Check the data fields for PCN:

- Do you have all relevant fields?
- Are they all filled correctly?

Contact your suppliers:

- Who is in charge and who will make the notification?
- Challenge to get composition information / UFI from non-EU manufacturers

Contact your customers:

- Be prepared to notify your products in your supply chain
- Communicate UFI to your customers

Take the Session Survey.

We want to hear from you! Be sure to complete the session evaluation on the SAPPHIRE NOW and ASUG Annual Conference mobile app.
