

Dynamic Context Aware Data Protection

Tobias Keller, Product Manager, SAP

ASUG83699

About the Speaker

Tobias Keller

- Product Manager UI Data Security, SAP
- Based out of Walldorf, joining SAP 2007 as consultant and later solution architect in SD/mobility/usability; managing UI Masking and UI Logging solutions since 2013

Key Outcomes/Objectives

ABAC (Attribute Based Access Control) – authorizations for the smart enterprise!

1. New Generation access rights get more dynamic, based on the context of a request
2. Required “context” resides in SAP systems – waiting to be leveraged!
3. “attribute-policy” paradigm exemplified in “UI Data Security Masking for SAP S/4HANA” (UI Masking)

Agenda

- Business use cases
- Background on UI Masking
- Demo of attribute based access
- Q&A

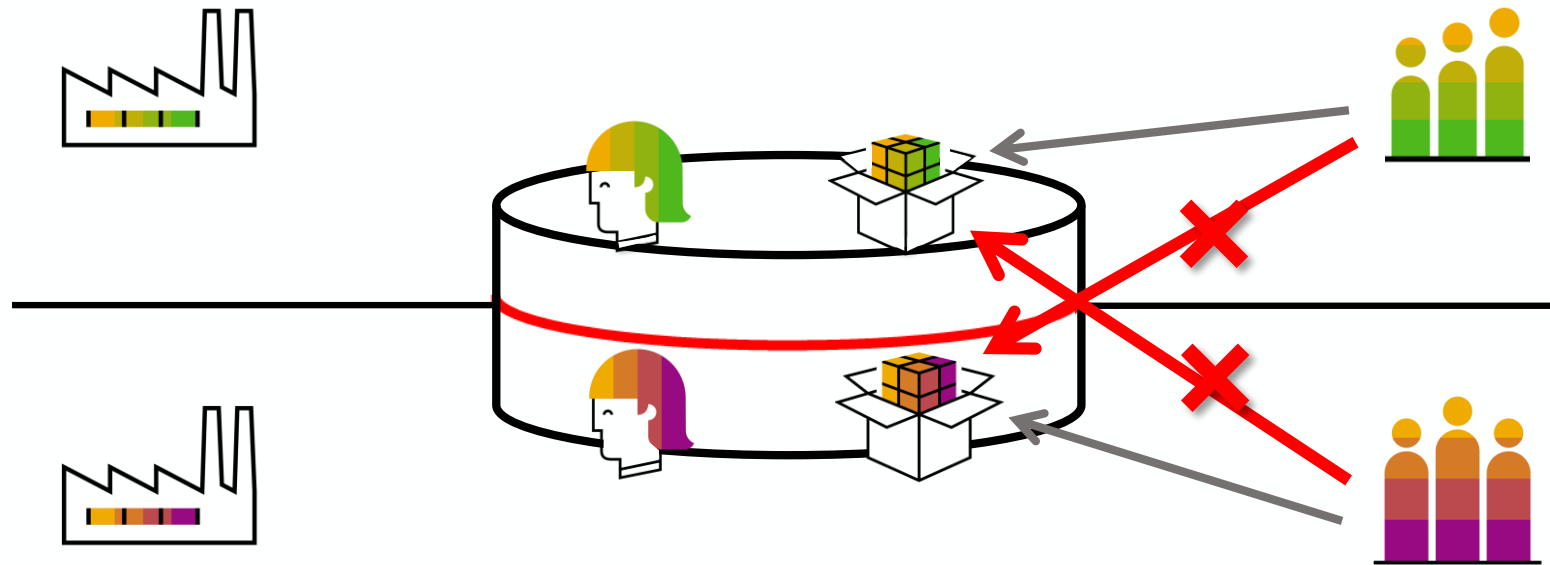

Business Background

Context dependent access: organizational splits

Temporary situation of “two organizations in one IT system” (M&A or spin-off)

If parts of an organization are split off (e.g. sold to another organization), processes and IT base usually take time to split. To avoid users from one entity also accessing the other organization’s HR data, pricing information, sales documents, etc., a logical split of the system needs to be conducted:

Context dependent access: legal restrictions from moving data outside a locality (offshore)

New legislation restricts users of a “foreign” locality to access specific information on “home” employees

Hypothetical Example: PII (personally identifying information) pertaining to U based employees may not be accessed by users based outside of the US (such as HR personnel in Europe, or IT support personnel in India)

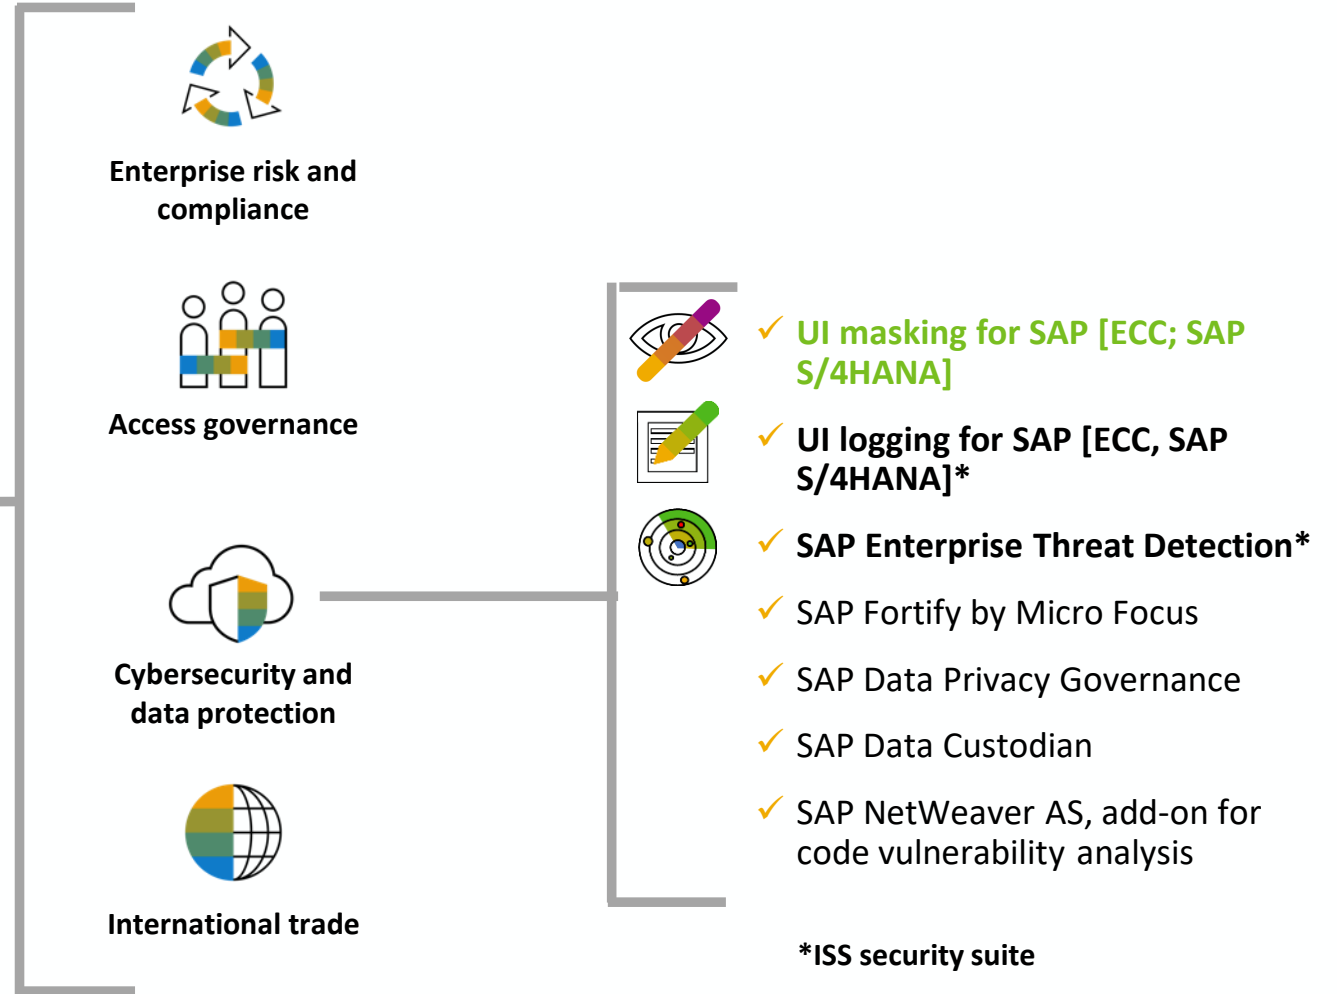

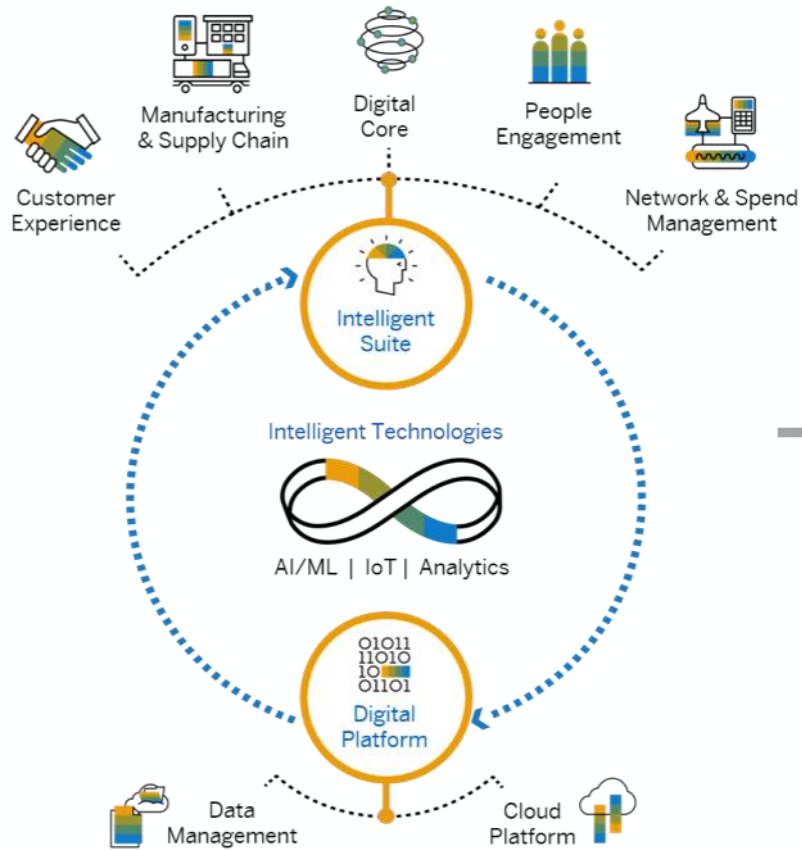

Dynamic authorizations based on context and policies

Example based on implementation in UI Masking

UI Masking in the SAP security product portfolio

Embed GRC and security in SAP S/4HANA

UI Masking: data protection by configurable obfuscation of sensitive data in SAP UIs

- configurable scope of data to be protected
 - configurable way how protection is required (security actions)
 - configurable additional authorizations for “clear” access
 - roles
 - **attributes and rules (“policies”)**
- configurations evaluated at runtime
- security actions applied to the UI layer only

UI Masking: data protection by configurable obfuscation of sensitive data in SAP UIs

Architectural Overview UI Masking

Configuration logic (overview)

- The “Logical Attribute” is the central object in configuration: it grouping sensitive context, triggers authorization, and controls consistent application of security actions across UI channels.

Demo

Outlook & Wrap-up

UI data protection masking

Product road map overview – Key innovations

Recent innovations

UI data protection masking for SAP S/4HANA, initial release

- Integrated data element based configurations for data security actions
- Data Security actions: masking field values; disabling fields; hiding fields
- “Reveal on Demand”
- Access trace (high level technical trace of data processed through UI Masking)

UI data protection masking for SAP S/4HANA, feature pack

- Framework for configurable attribute-rule based authorization determination

2019 – Planned innovations¹

UI data protection masking for SAP S/4HANA, feature pack

- Integration of Access Trace as a log provider into SAP Enterprise Threat Detection
- Data blocking

2020 – Product direction¹

UI data protection on „SAP S/4HANA Cloud“

- Technical availability of UI data protection for SAP’s public cloud offering

UI data protection *bundle* for SAP S/4HANA, initial release

- Technical and functional integration with “UI data protection logging for SAP S/4HANA”
- Granular and dynamic control which data accesses are masked, logged, notified
- Reveal on Demand with integration framework (e.g. for multi factor authentication, consent management systems)

2021 – Product vision¹

UI Data Security bundle on SAP Cloud Platform

- Technical availability of the UI Data Protection bundle in the SAP Cloud Platform for consumption by SAP SaaS applications

Check [SAP Roadmaps](#) for this and other solutions' roadmaps

1. This is the current state of planning and may be changed by SAP at any time without notice.

Wrap up

1. Next Generation access controls for securing the intelligent enterprise are dynamic and “attribute based”
2. A generic and flexible framework utilizes “policies” for
 - Defining rules and
 - Utilizing context/attributes existing in SAP systems

Thank you.
