

Learn how Microsoft enables Telemetry for ERP, S/4HANA & SAP SaaS on Azure

Enda Sullivan, Program Manager, Microsoft
Blake Barrow, Architect, Microsoft
Aron Stern, Architect, Microsoft

Session ID #83791

Key Outcomes/Objectives

1. Understand how the 'SAP at Microsoft' internal implementation leverages Telemetry and Monitoring across SAP on Azure
2. Learn best practices implementing SAP Telemetry and Monitoring on Azure
3. Maximize your SAP on Azure Telemetry investment for the future

Agenda

- 'SAP at Microsoft' introduction
- Key challenges we needed to solve
- How we did it with enterprise Telemetry
- Telemetry and Monitoring of the Future

SAP Applications at Microsoft – Business View

SAP ERP by the Numbers

 Deliver Reliant & Agile ERP Platform		 Enable Modern Experiences		 Provide Real Time Processes	
17TB	Highly compressed database	Uncompressed size ≈55TB		9M	Up to Dialog Steps/Day
				300K	Monitored Batch Jobs/Month
				300M	Up to Transaction steps/Month
SAP Surround Strategy		110K	Internal Users (Mostly Indirect Access to SAP)	8K	Named User Accounts
				96%	Non-SAPGUI users
		Major First & Best Program			
		0.4	Seconds user response time	Business Process Expertise	
					
				99.998%	Raw SQL/Win Uptime
2x	System growth in past 2 years	2x	Transaction volume ever 18-24 months	≈600	Servers (100% virtual)
				250TB	Compression Storage Savings
				15-30% yearly	Incident Ticket Reduction

High Quality Enterprise Service Offerings via SAP

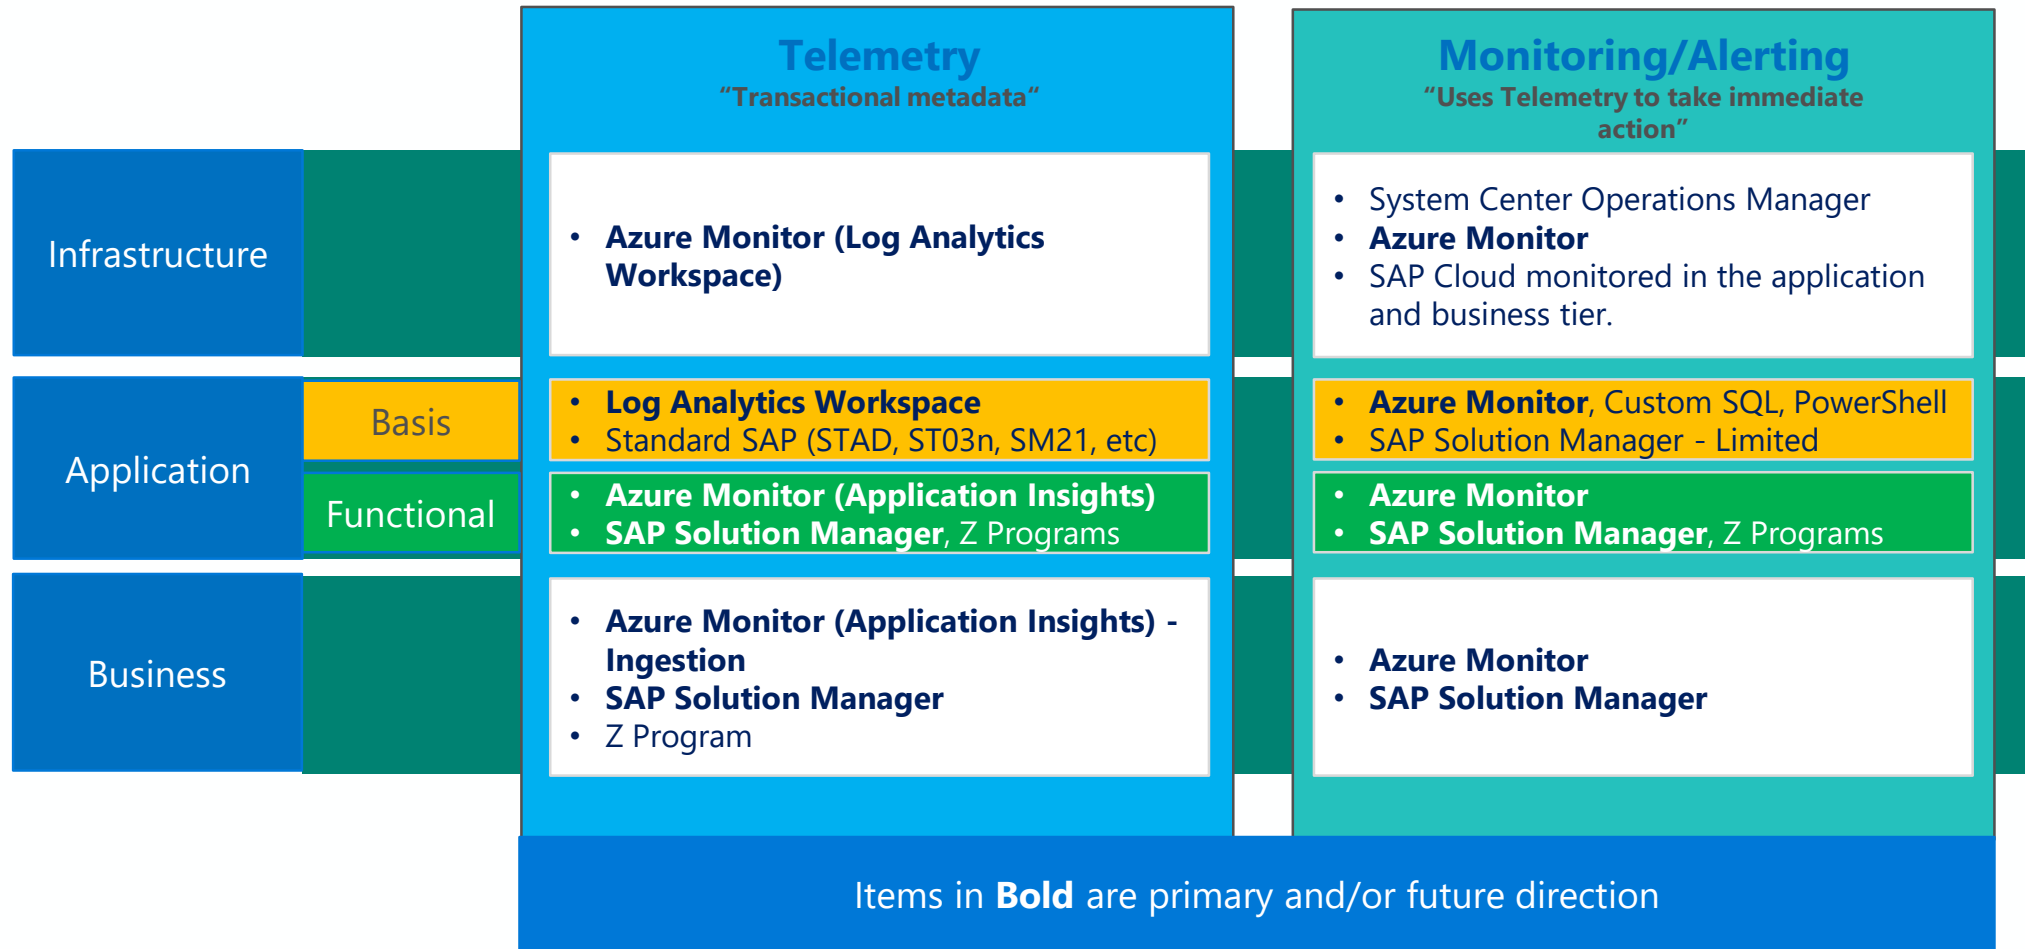

Key challenges we needed to solve

- A lack of understanding of SAP - considered a 'black box' at Microsoft
- Talk the same language when measuring End to End Business Process health
- Modernize our SAP Telemetry & Monitoring

Evolving SAP on Azure – Telemetry & Monitoring

SAP Telemetry and Monitoring Approach

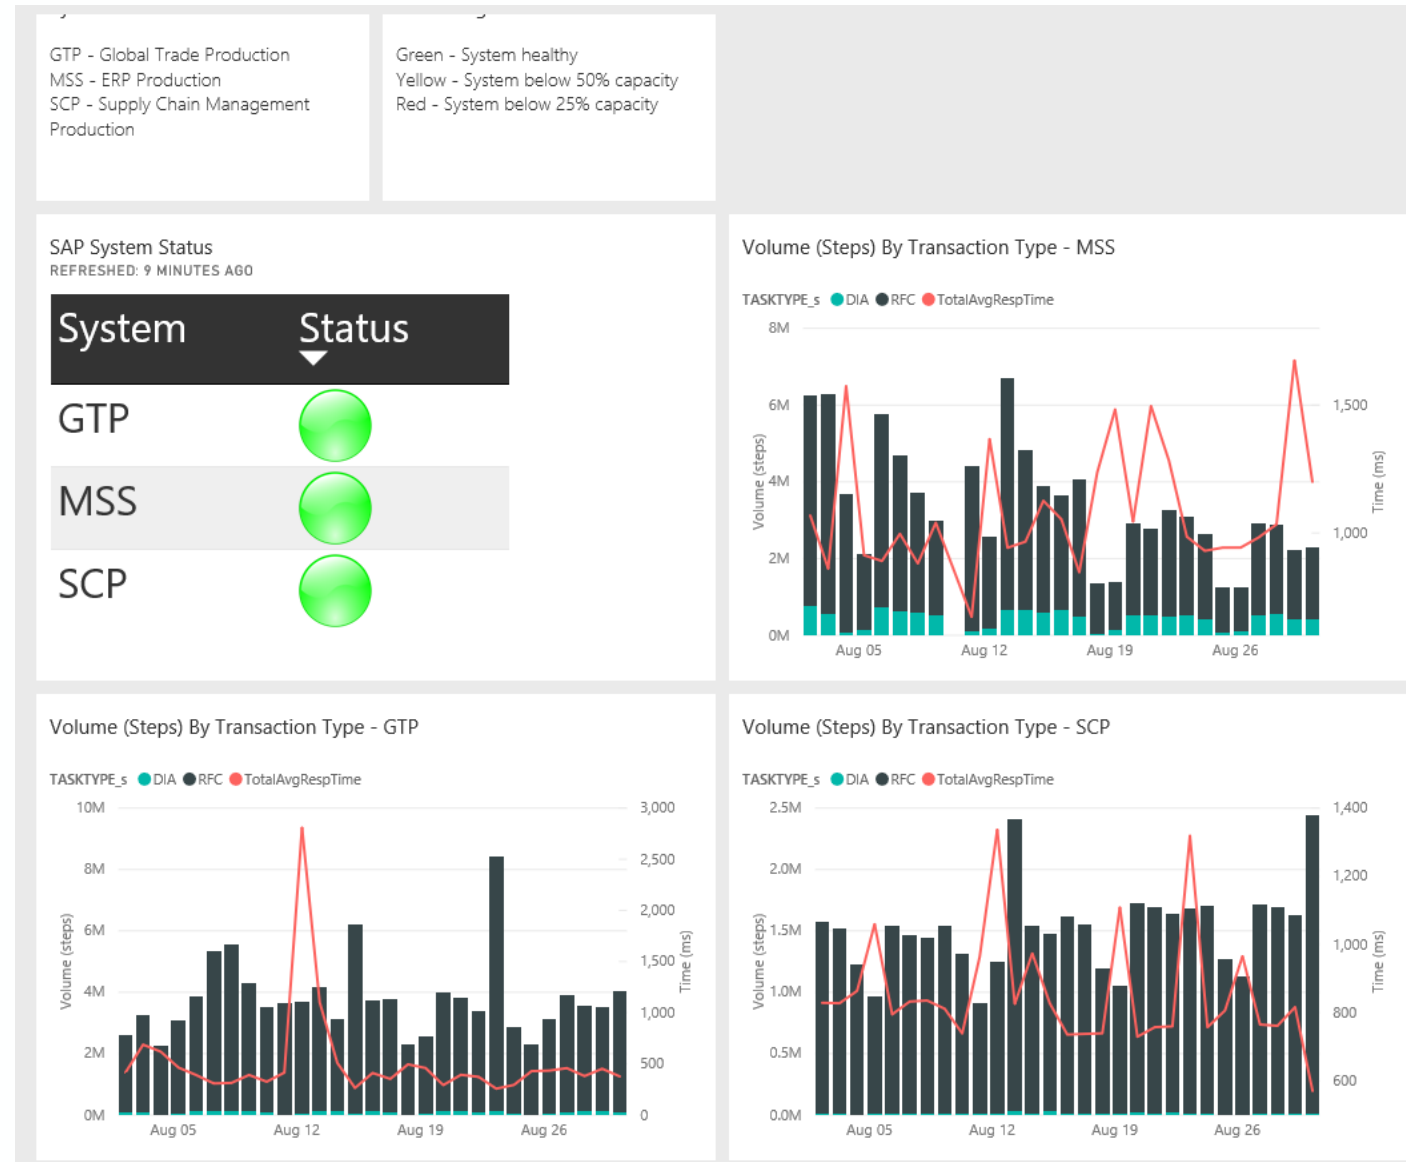

SAP Platform System Health Dashboard (PowerBI)

Early MVP

Azure Monitor Logs for HANA

Current State

Allows combining different types of telemetry/events into a single location

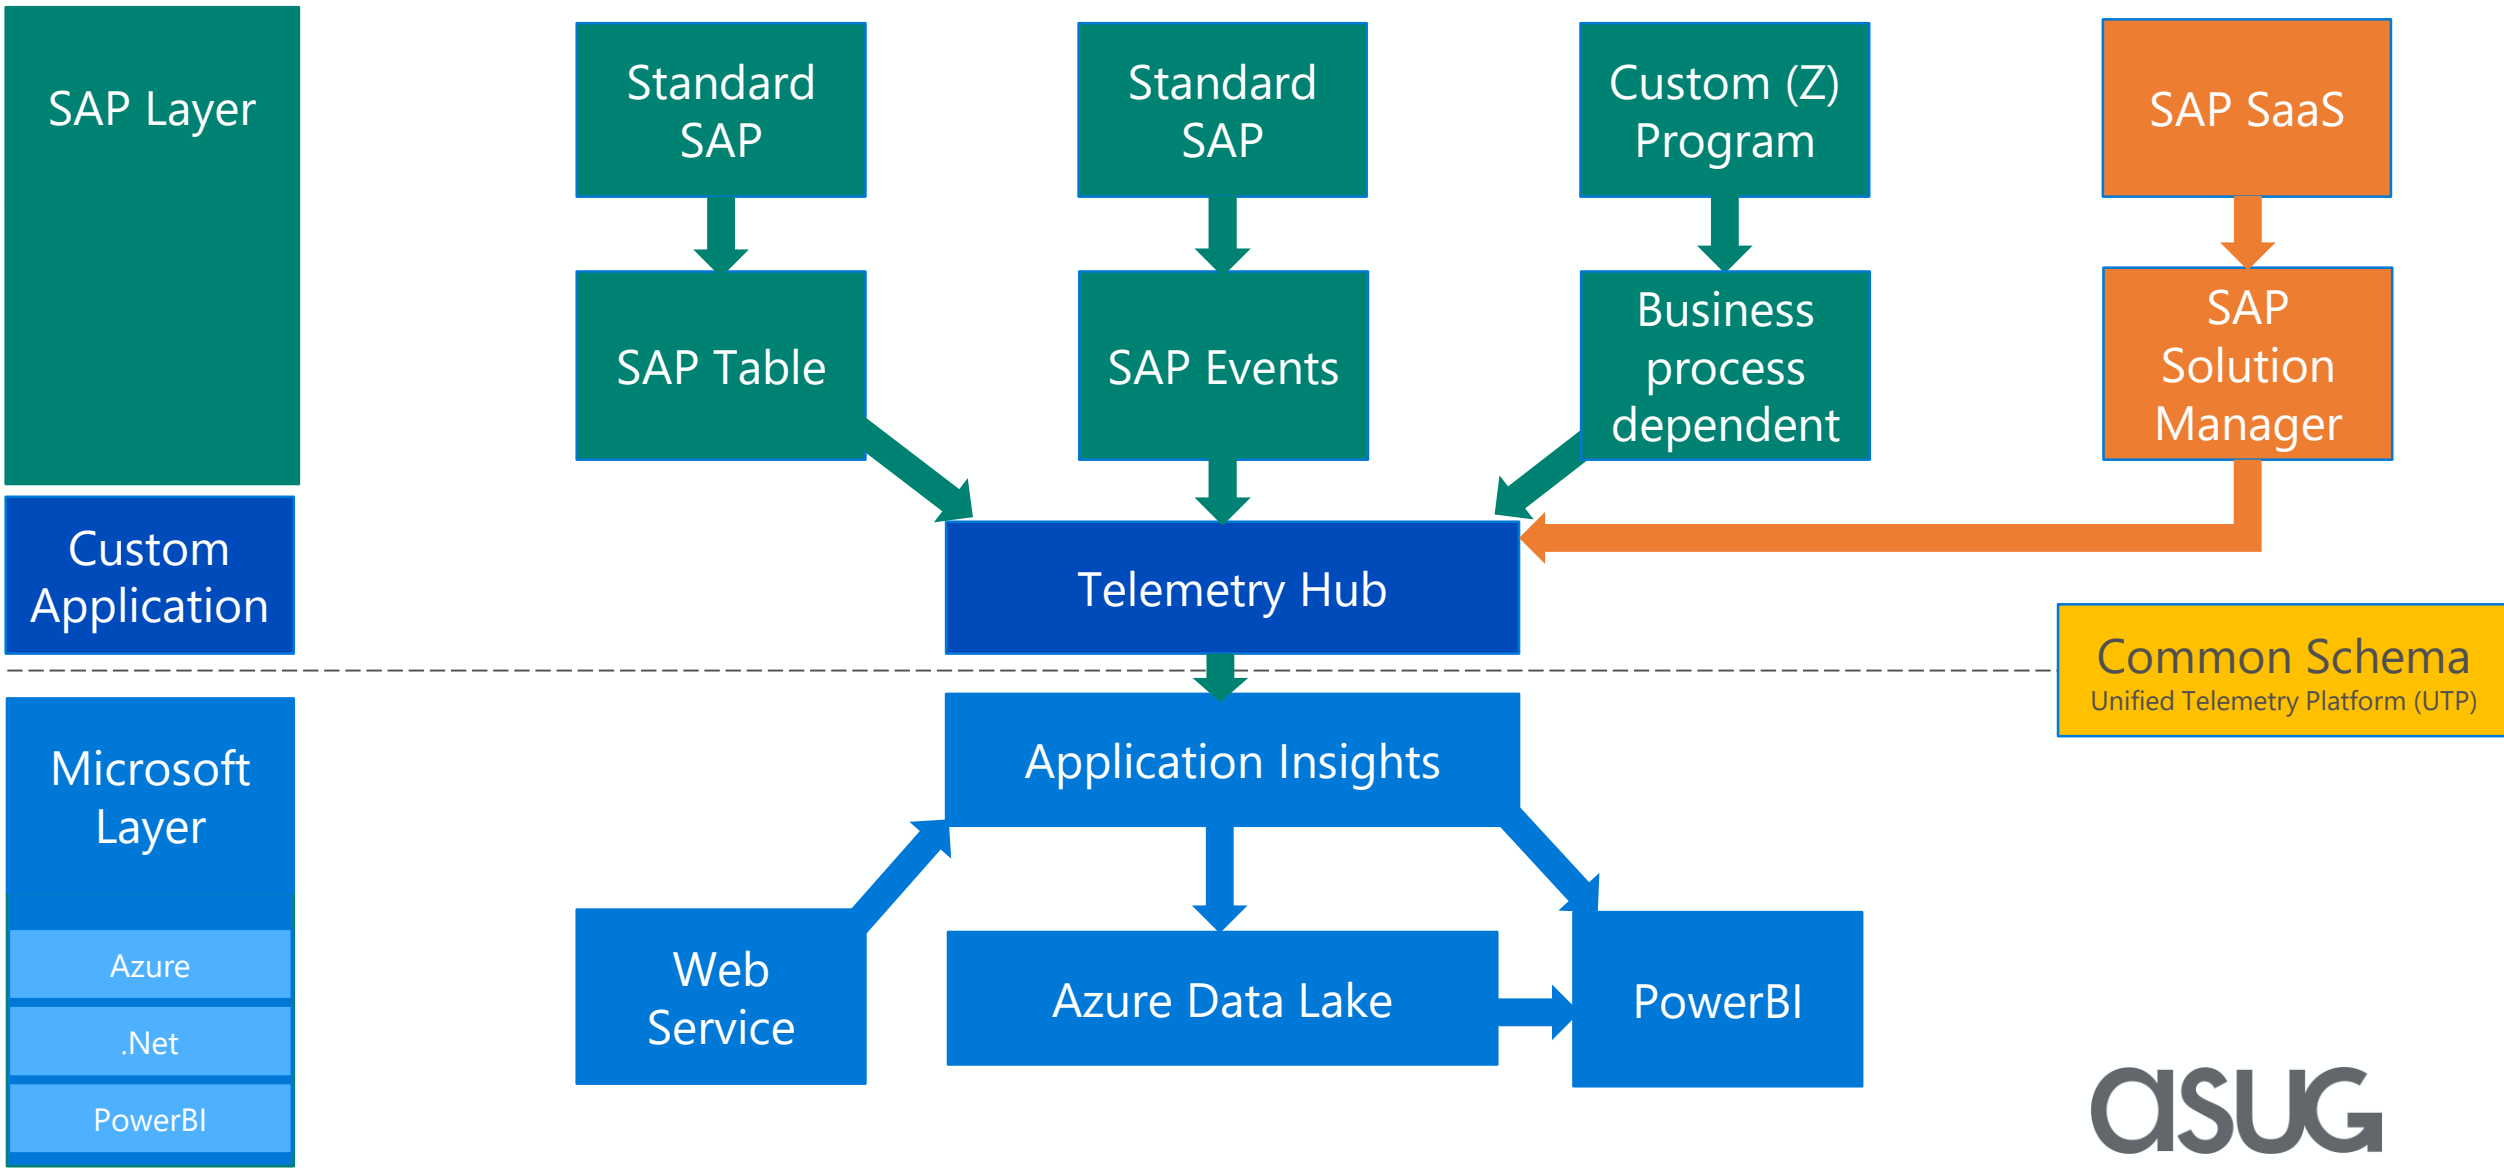

Visibility across different HANA instances and technologies

Future Ideas

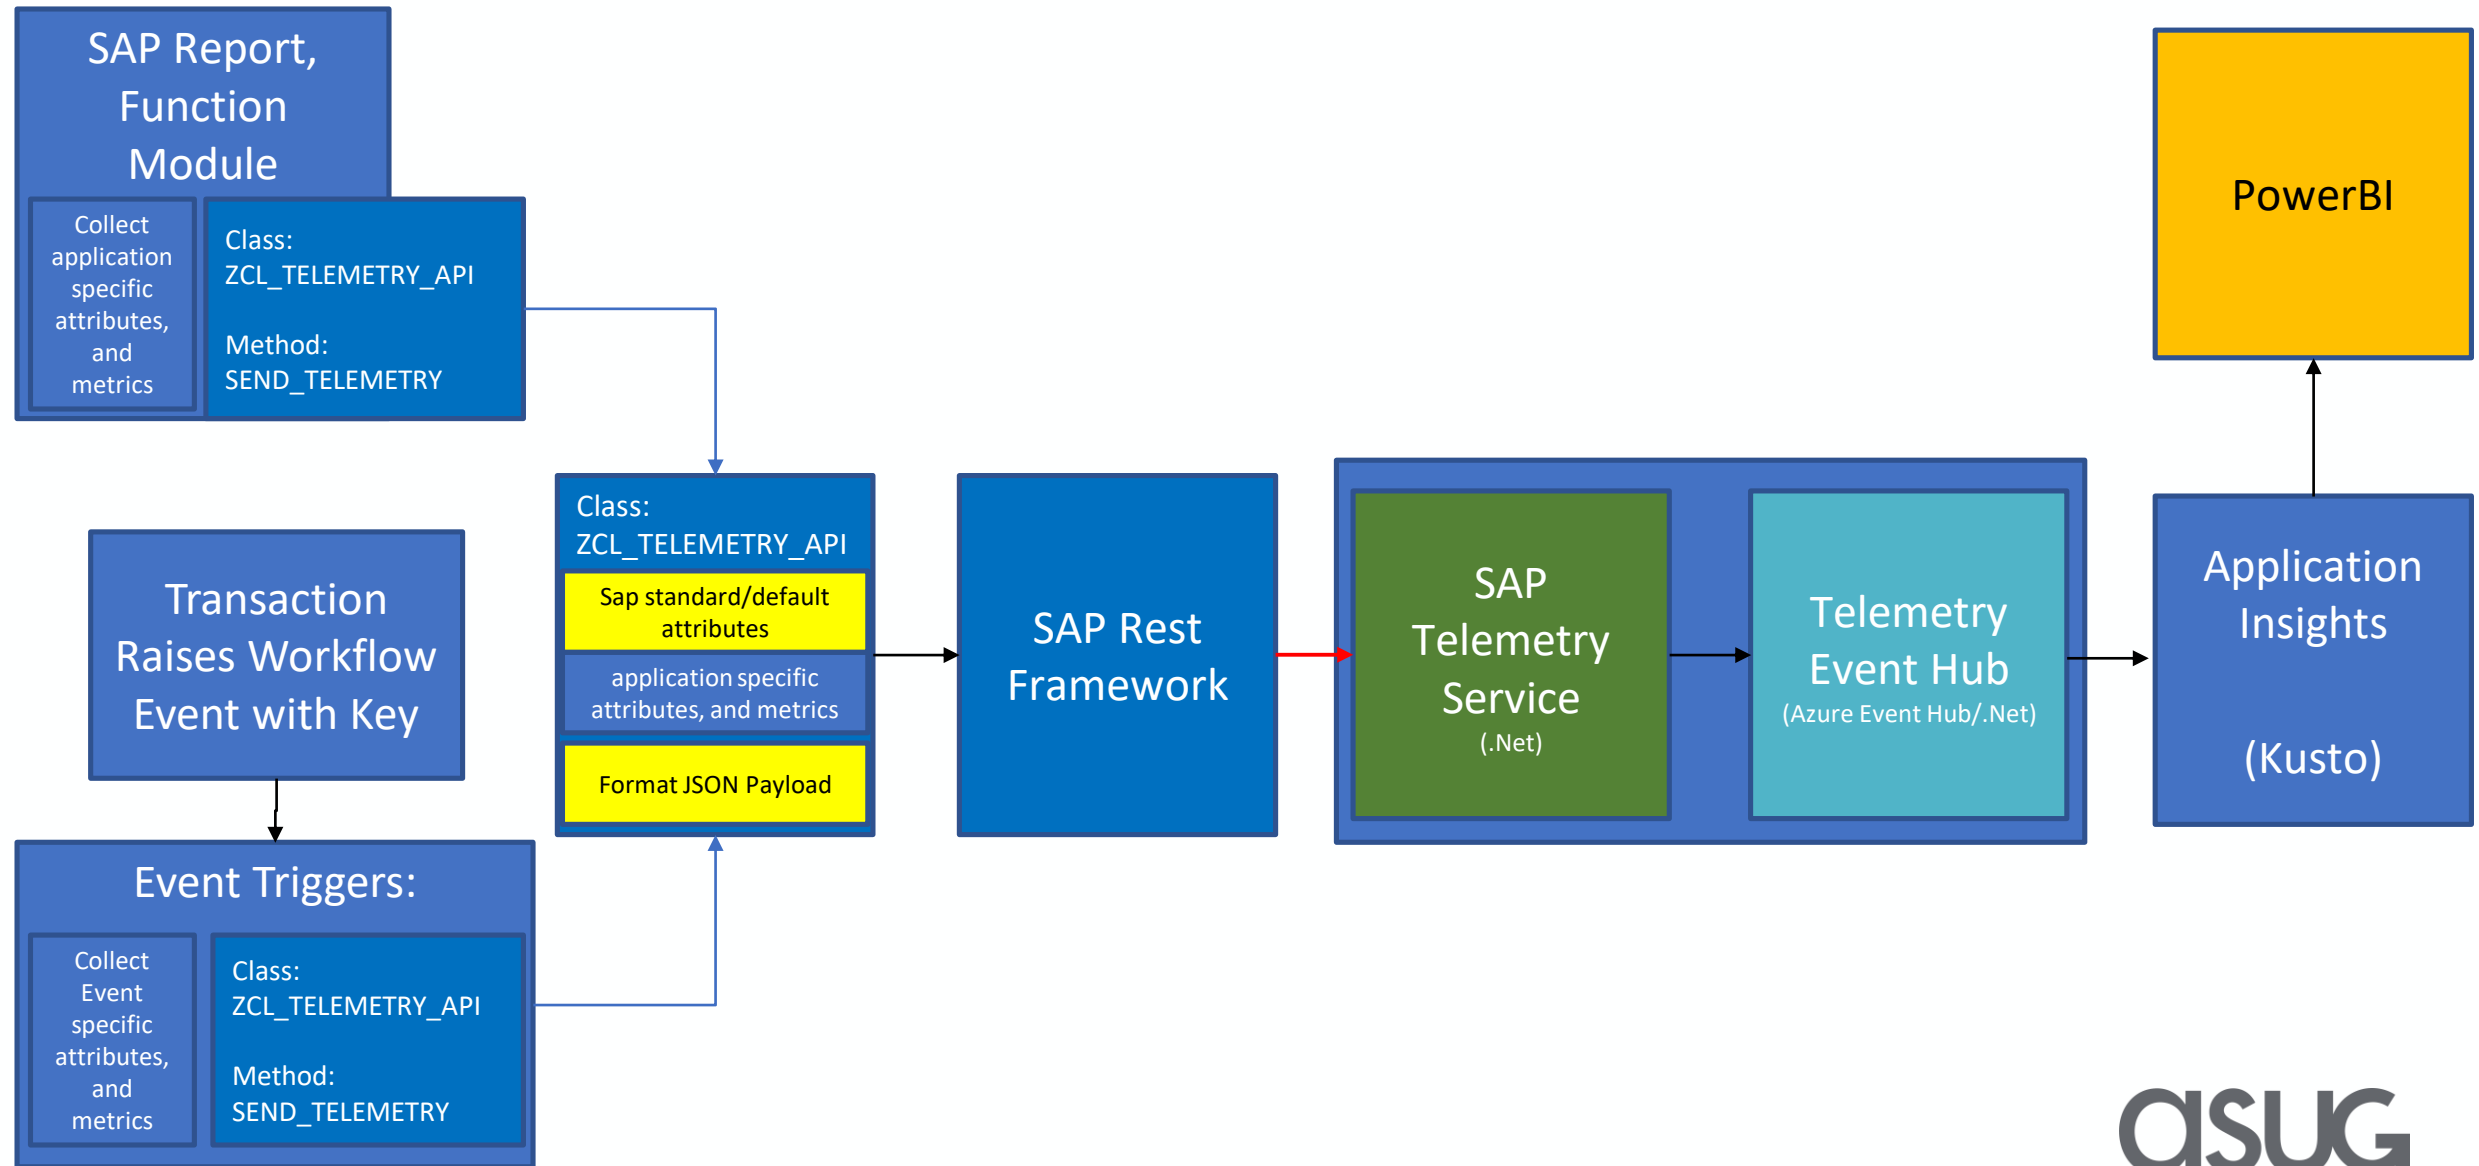

Ability to leverage machine learning for deeper insights into your HANA platform and SAP Systems

Using Application Insights for SAP Telemetry

The Microsoft SAP Telemetry Pipeline

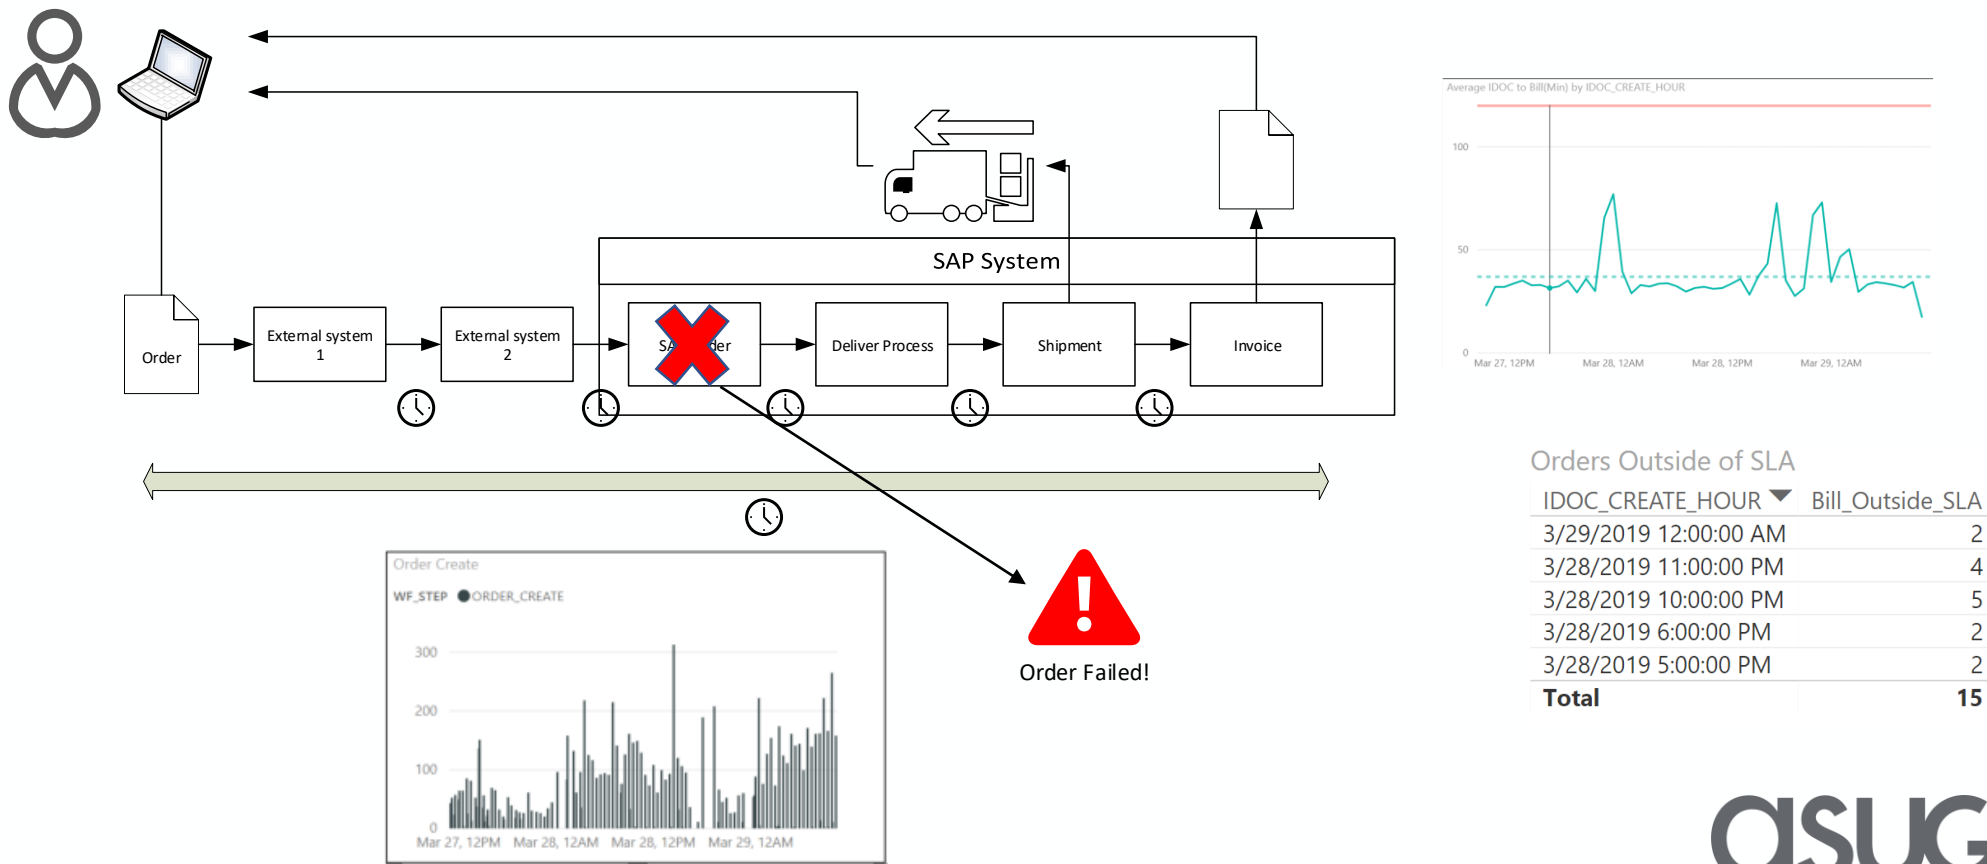

Enabling Enterprise Business Process Telemetry

What is Business Process Telemetry?

Business Process Telemetry captures the critical events of a business transaction as it flows across the application landscape.

Why enable Business Process Telemetry? Automated Measurements, Statistics, Alerting and Monitoring

Key Personas

Business User

I need visibility to the status of my business transactions as they flow through the MS/SAP ecosystem.

I will no longer need to create service tickets to get the status of my SAP transaction flow.

Engineering Team

We want to know business process issues before it impacts business operations and leads to customer satisfaction issues. We need end to end visibility of business transactions through SAP telemetry data in a common consumption format (UTP) with shared keys.

We no longer need to check multiple SAP transactions to investigate business process issues. to identify which step the business process has failed/stuck. We will improve the Mean Time-To-Detect (MTTD) and Mean-Time-To-Resolve (MTTR) with the right telemetry data and avoid business disruption for our customers.

Executives

As an executive I need to ensure our business processes are flowing smoothly. If there are critical failures, I need to know before my customers or partners.

I will have trust that my business process executes seamlessly all the time and errors get proactively address with no impact to customers or partners.

Finance (Payments) – PowerBI Dashboard

Payments Service UTP data - MSS Payments

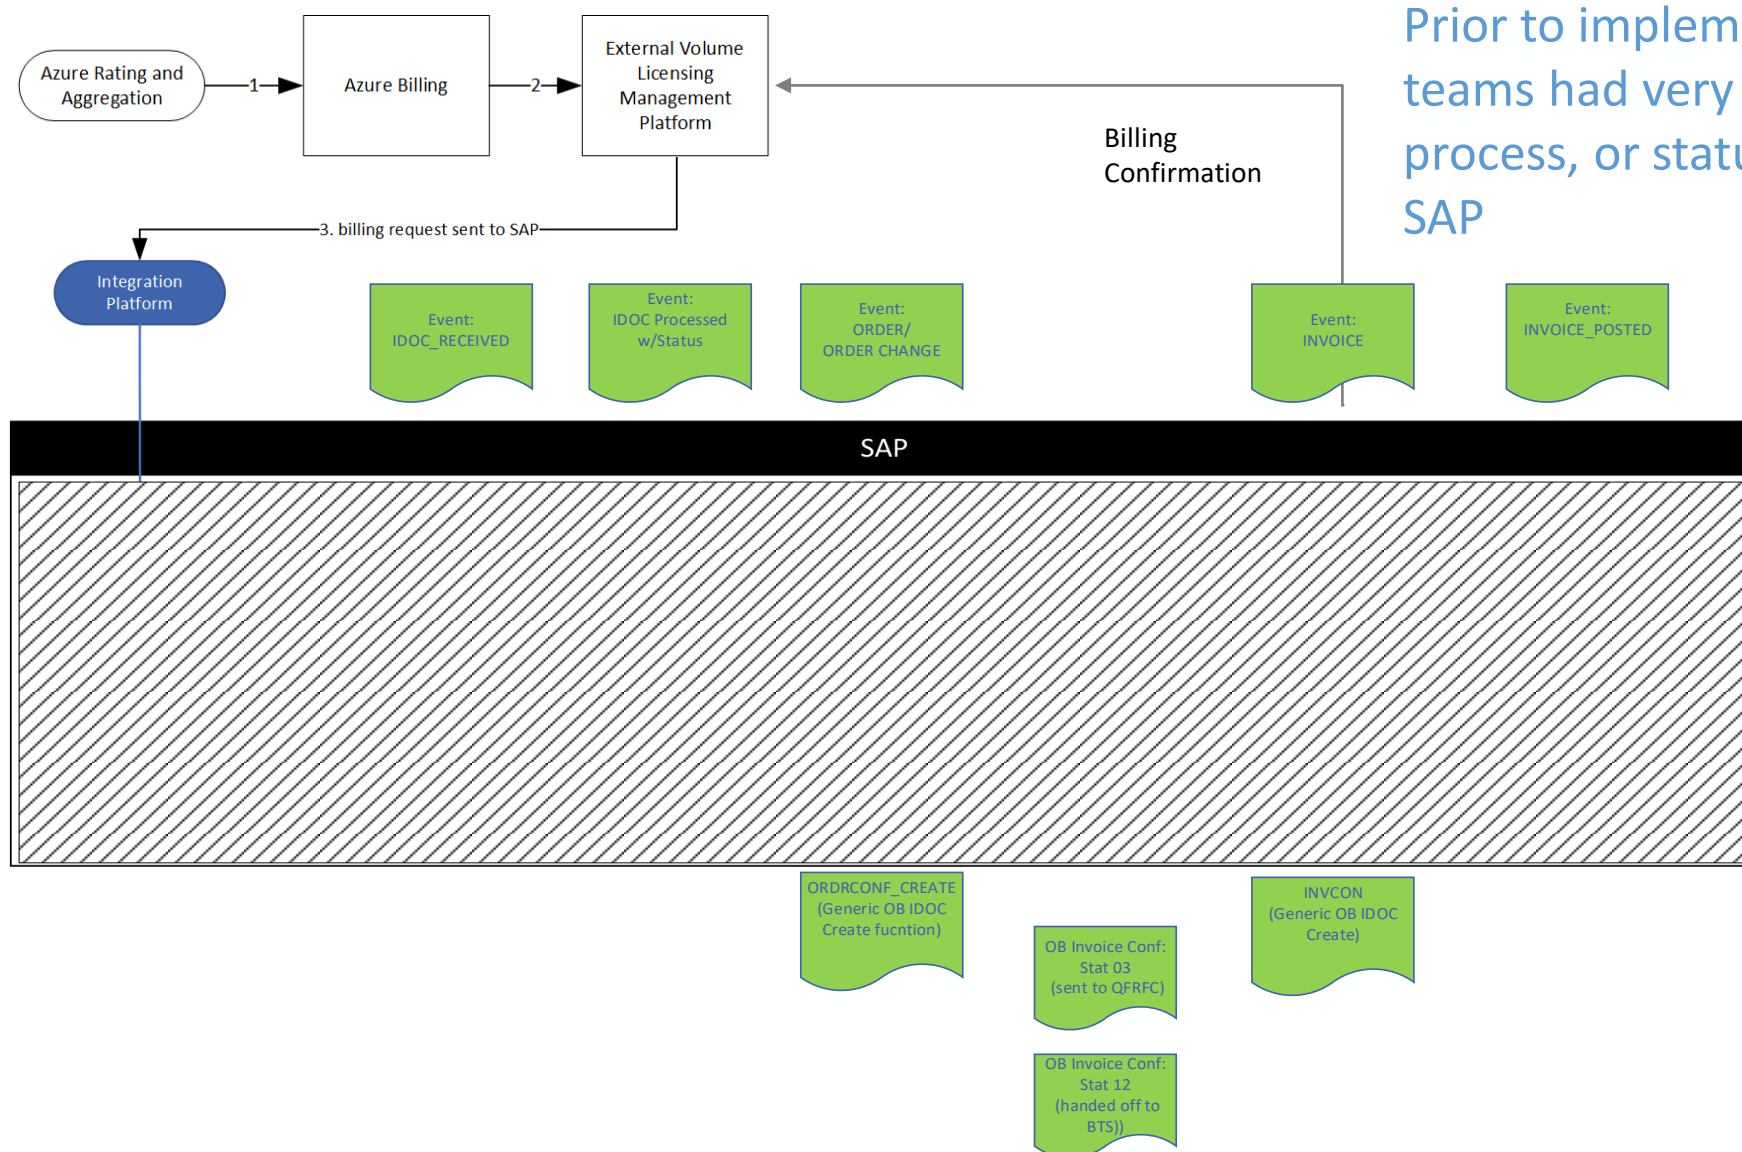

Date Range		# Payment Runs	# Payment Runs Completed	# PAIN001 Created	# Pay Medium Created	# Received by Pay Network

Order to Cash Business Process (Volume Licensing)

Prior to implementing Telemetry, our partner teams had very little visibility to the business process, or status of their billing requests in SAP

- Now, our partner teams can access detailed tracking of all their transactions as they flow across the eco system.
- Internally, we can now automatically detect failures and service level breaches in near real time; as well as track volumes and performance.

About the Speakers

Enda Sullivan

SAP Program Manager, Microsoft

Enda has worked at Microsoft for over 15 years. He is currently focused on enabling Microsoft's digital transformation with SAP on Azure for the 'SAP at Microsoft' internal implementation. He focuses on enabling Go-To-Market (GTM) scenarios and showcasing customer scenarios from the 'SAP at Microsoft' implementation, as well as leading the strategic rhythm of business with SAP AG and Microsoft executive teams. Prior to Microsoft Enda spent 12 years in various SAP lead roles across Europe and the US.

Blake Barrow

SAP Architect, Microsoft

Blake started working with SAP as an Analyst and Programmer for a major medical company in 1995 and has been at Microsoft for the last 13 years. At Microsoft, Blake has had various analyst and architecture roles supporting our Order to Cash and procurement processes for Supply Chain and Volume licensing. He is currently the architect for the MS-SAP Telemetry solution, and Business Analytics.

Aron Stern

SAP Architect, Microsoft

Aron has over 14 years of experience working with SAP at Microsoft in technical roles. He was the lead architect for Microsoft's internal SAP migration to Azure and continues to get involved in all things Azure related.

Take the Session Survey.

We want to hear from you! Be sure to complete the session evaluation on the SAPPHIRE NOW and ASUG Annual Conference mobile app.
