

Axalta's Journey Implementing S/4 HANA Central Finance

Ankur Banga, Solution Architect, Axalta
Session ID # 84283

About the Speaker

Ankur Banga

- Solution Architect, Axalta Coating Systems
- Extensive experience in planning and execution of SAP finance transformations since 2006
- MBA in Finance and certified in 5 SAP modules
- Love to bike in the summer and ski in the winter

Key Outcomes/Objectives

1. Learn about Axalta and its reasons to implement S/4 HANA Central Finance
2. Highlight the 11 month journey from project approval, design, build, test and all the way to go-live
3. Highlight key successes and areas of improvement for future CFIN implementations

Agenda

- Axalta Overview
- Why Axalta chose Central Finance
- Benefits realized
- Our corporate reporting landscape
- Axalta's journey to a successful implementation
- Key Success Factors
- Areas of Opportunity
- Central Finance Run & Maintain requirements

Axalta's Global Breadth and Scope

\$4.7 BILLION IN REVENUE

100,000+

Customers

4,000+

Distributors

~14,000

People

130

Countries

50+

Brands

50

Manufacturing Centers

47

Training Centers

4

R&D Technology Centers

30+

Laboratories

150+

Years in the Industry

DURABLE COATINGS THAT PROTECT, ENHANCE PRODUCTIVITY AND ADD BEAUTY

ASUG

Customer Segments and End-Use Markets

SEGMENTS	TRANSPORTATION COATINGS		PERFORMANCE COATINGS	
				
END MARKETS	LIGHT VEHICLES	COMMERCIAL VEHICLES	INDUSTRIAL	REFINISH
	<ul style="list-style-type: none"> Automotive Interiors Automotive Parts and Components (APC) Original Equipment Manufacturers (OEM) 	<ul style="list-style-type: none"> Aviation Bus Heavy and medium duty trucks Marine Rail Recreational & off-road Trailers and utility trucks 	<ul style="list-style-type: none"> Electrical insulation systems Architectural & decorative Oil & gas pipelines Valves & rebar Automotive components & specialized coatings Metal furniture & playground General industrial Agriculture, construction & earth moving equipment Coil / extruded metal Industrial wood coatings 	<ul style="list-style-type: none"> Multi-shop operators Independent body shops Light vehicle / car dealerships Commercial Vehicle aftermarket
POSITION	Global leading supplier to OEMs	#1 Global supplier to heavy duty truck and bus segments	#2 Global supplier to the electrical insulation sector #2 Global supplier to the powder coatings sector #2 North America supplier of industrial wood coatings	#1 Global supplier to refinish sector

Why Axalta chose Central Finance

Axalta is planning a multi-year business transformation initiative to transition from disparate processes to standard, global, harmonized and efficient processes leveraging a single instance SAP S/4HANA as the technology enabler

First step in this transformation journey was to develop a financial reporting platform based on

- SAP S/4 HANA Central Finance
- BPC Optimized for S/4 HANA Planning

Axalta selected CFIN as the solution of choice to

- Replace a summarized management reporting system focused on month-end reporting
- Provide a platform for seamless integration of mergers & acquisition
- Establish the foundation of a global transactional system, both technically and functionally

Benefits Axalta realized

Platform-inherent benefits

Real-time reporting

- Caution – some process like depreciation, payroll and translation are still periodic

Granular Reporting

- At customer, vendor and material level

Segment Reporting

- Accounting and reporting by Segments

Modern Interface

- Fiori

Benefits from Axalta's Process-Redesign

Dimensionality switch

- Redefined profitability characteristics with no impact to core transactional systems

Agile and efficient closing process

- Eliminate complex, sequential Special Purpose Ledger processes
- Eliminate manual file transfers
- Reduce reconciliation efforts

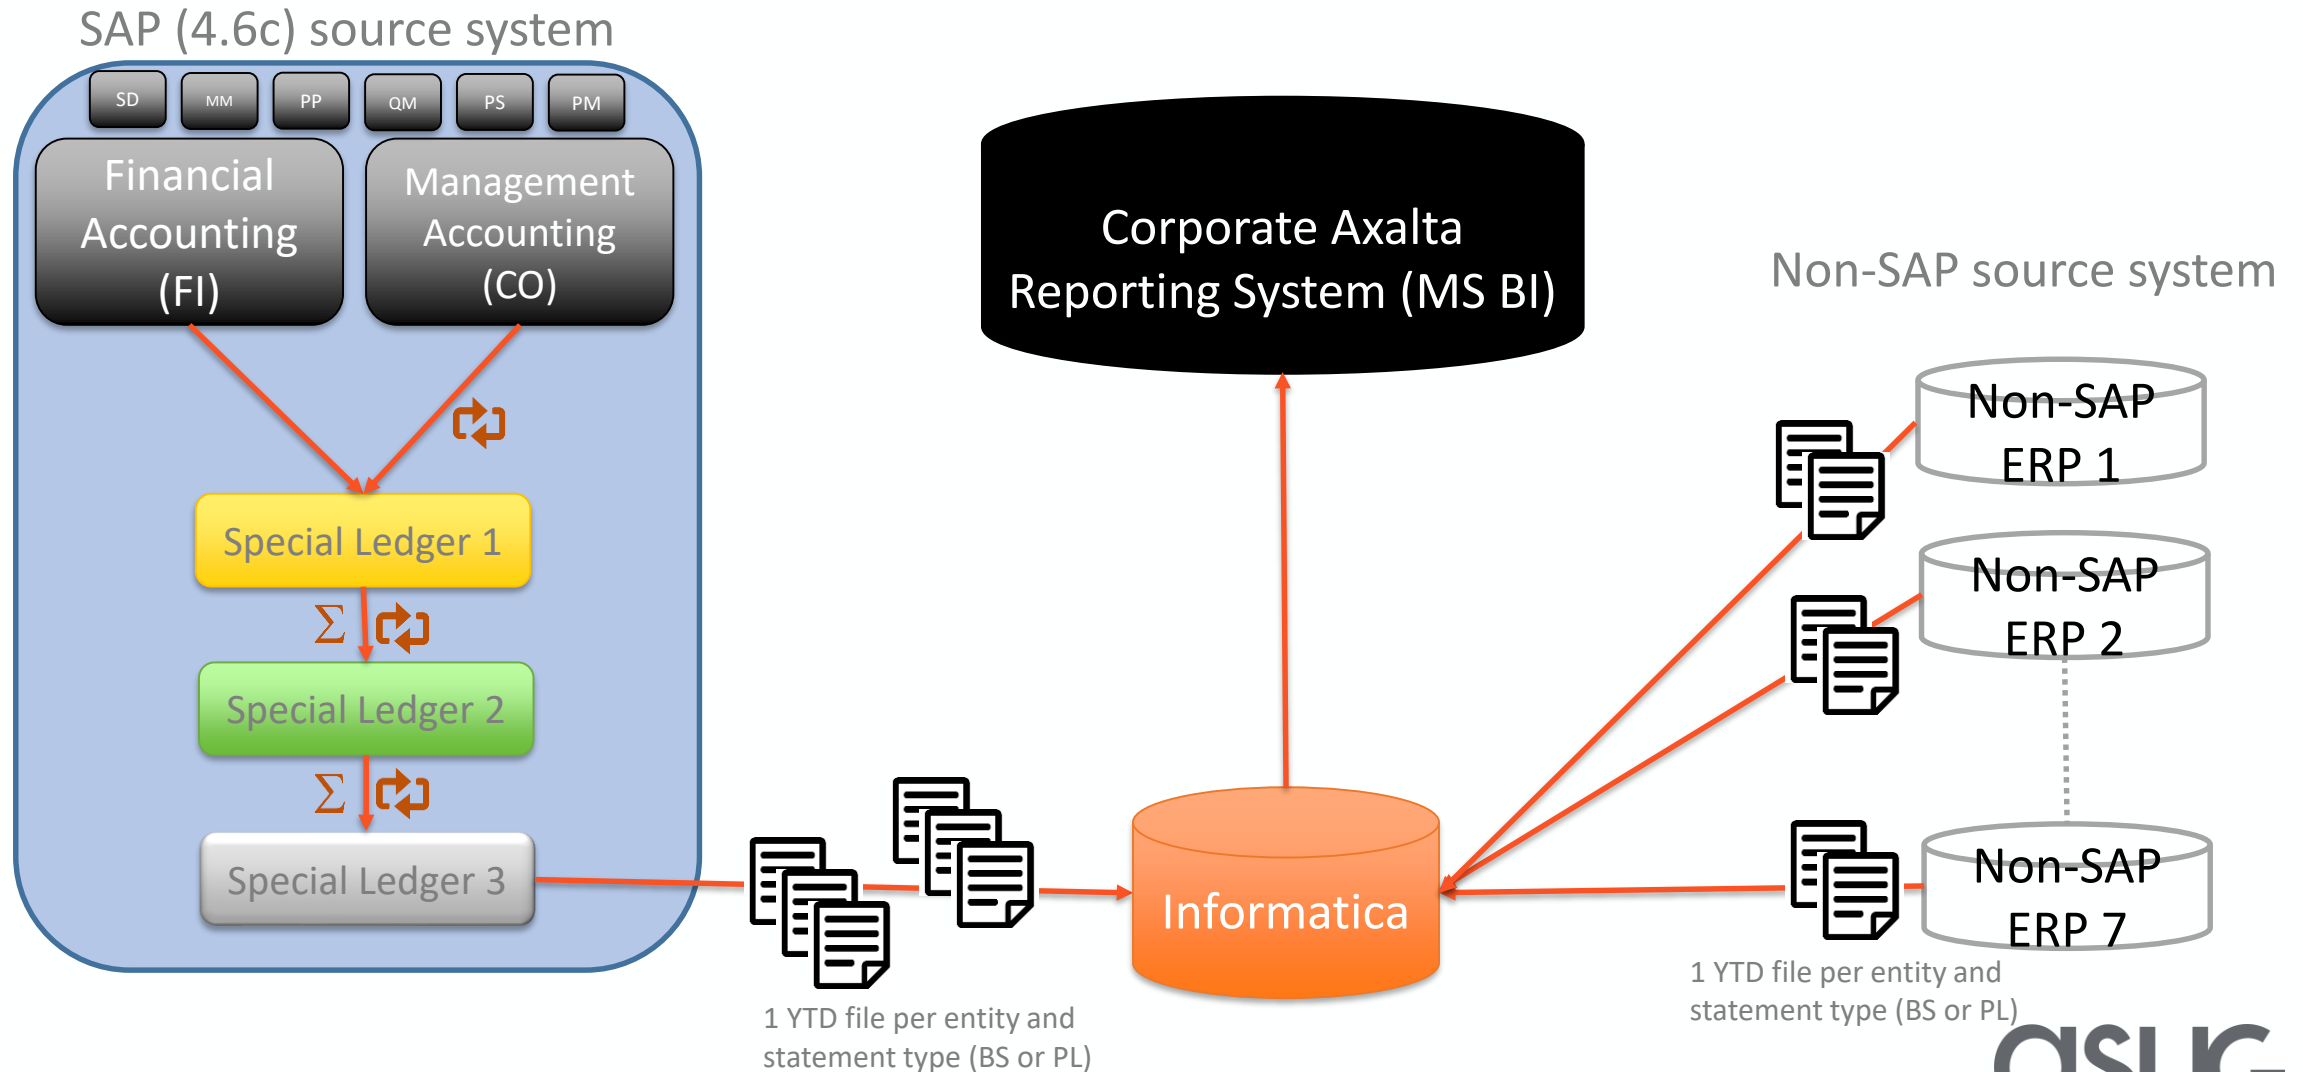

Custom COPA to Standard FI

- Fully utilize all transactional (Allocations, Translations etc.) and reporting requirements

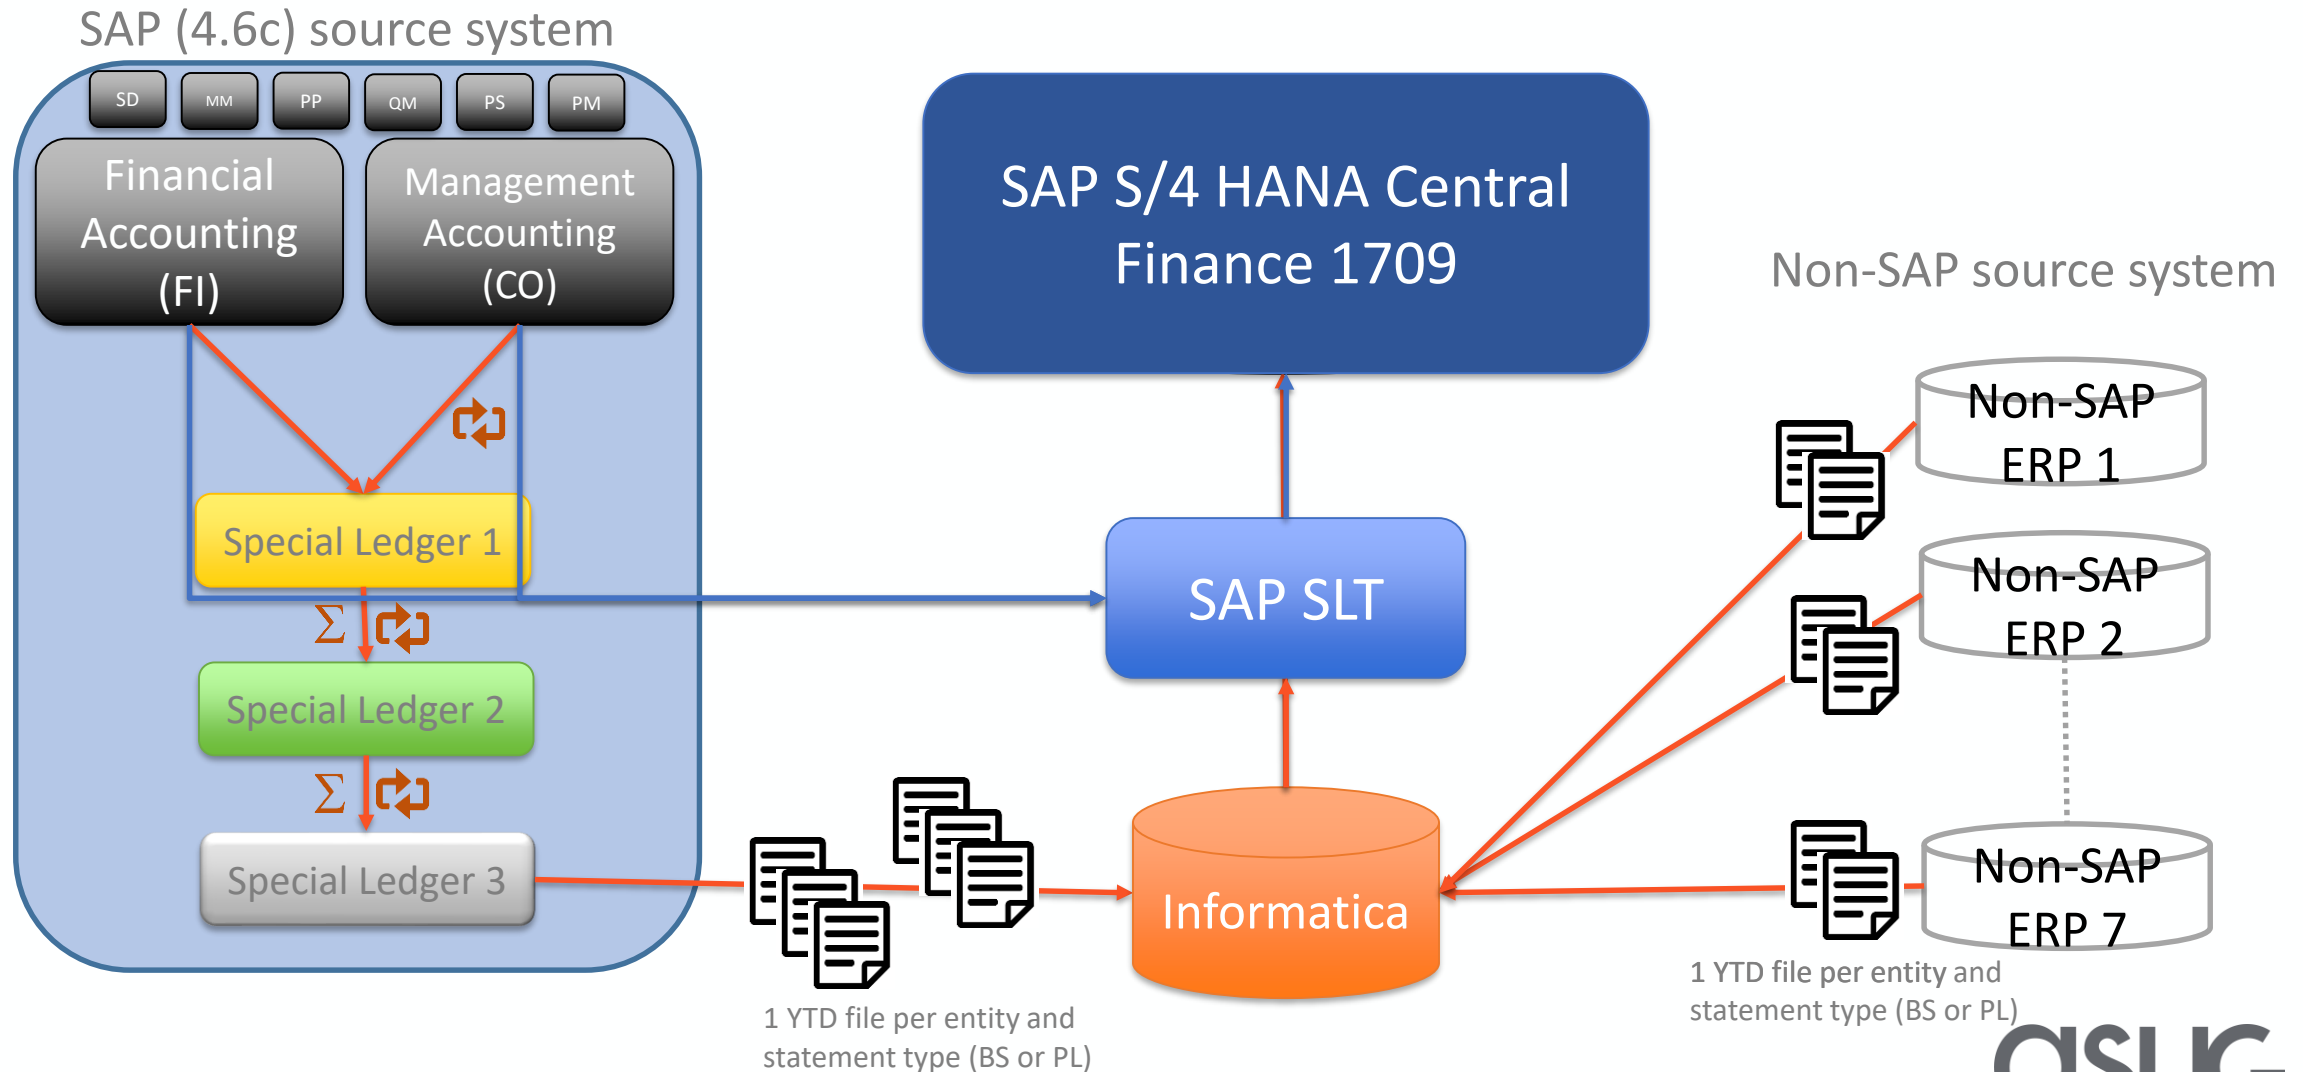

Quantity reporting

- Complement financial values with quantities, converted to standardized global units of measure

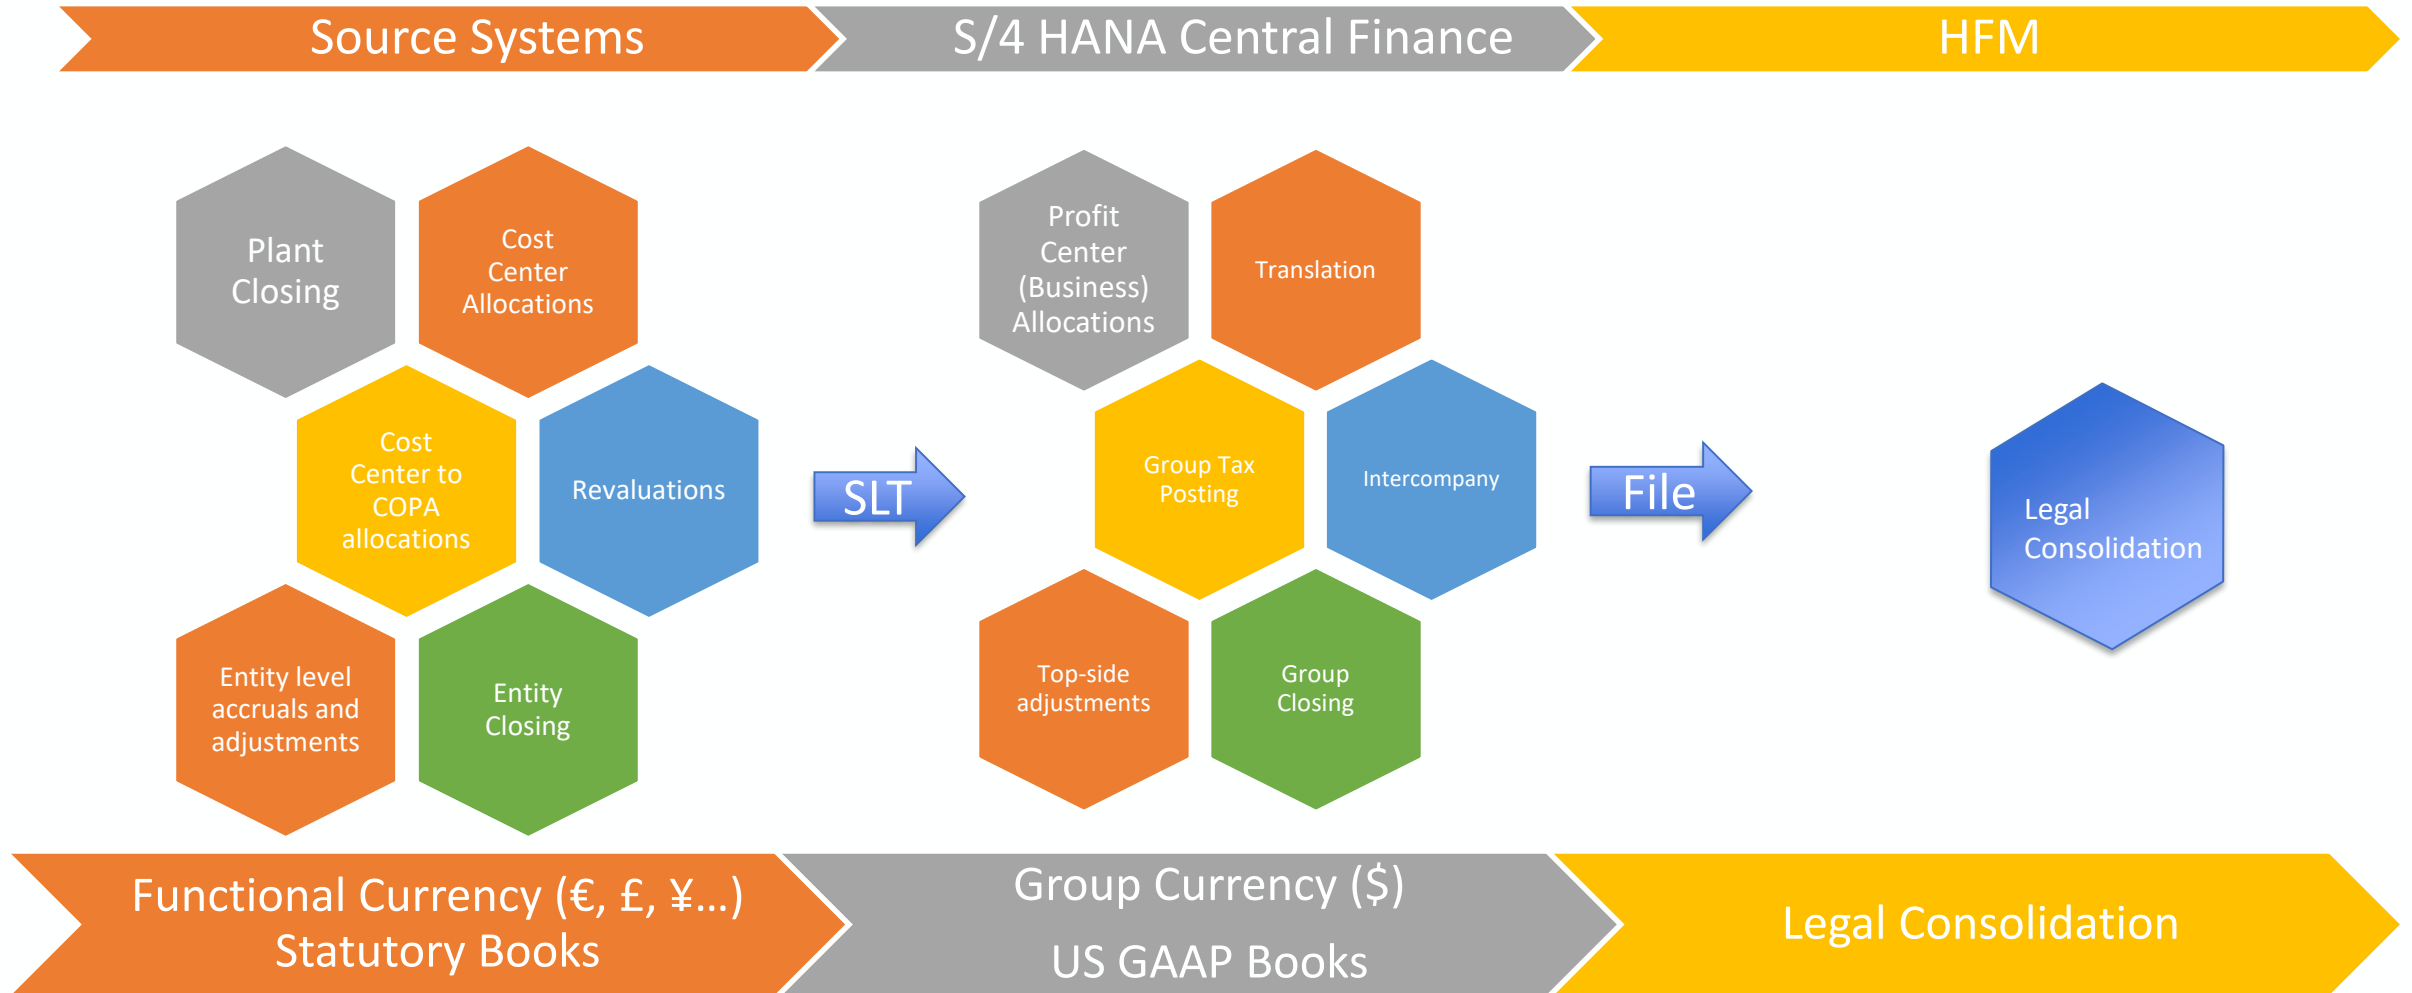

Corporate Reporting System Landscape - Before

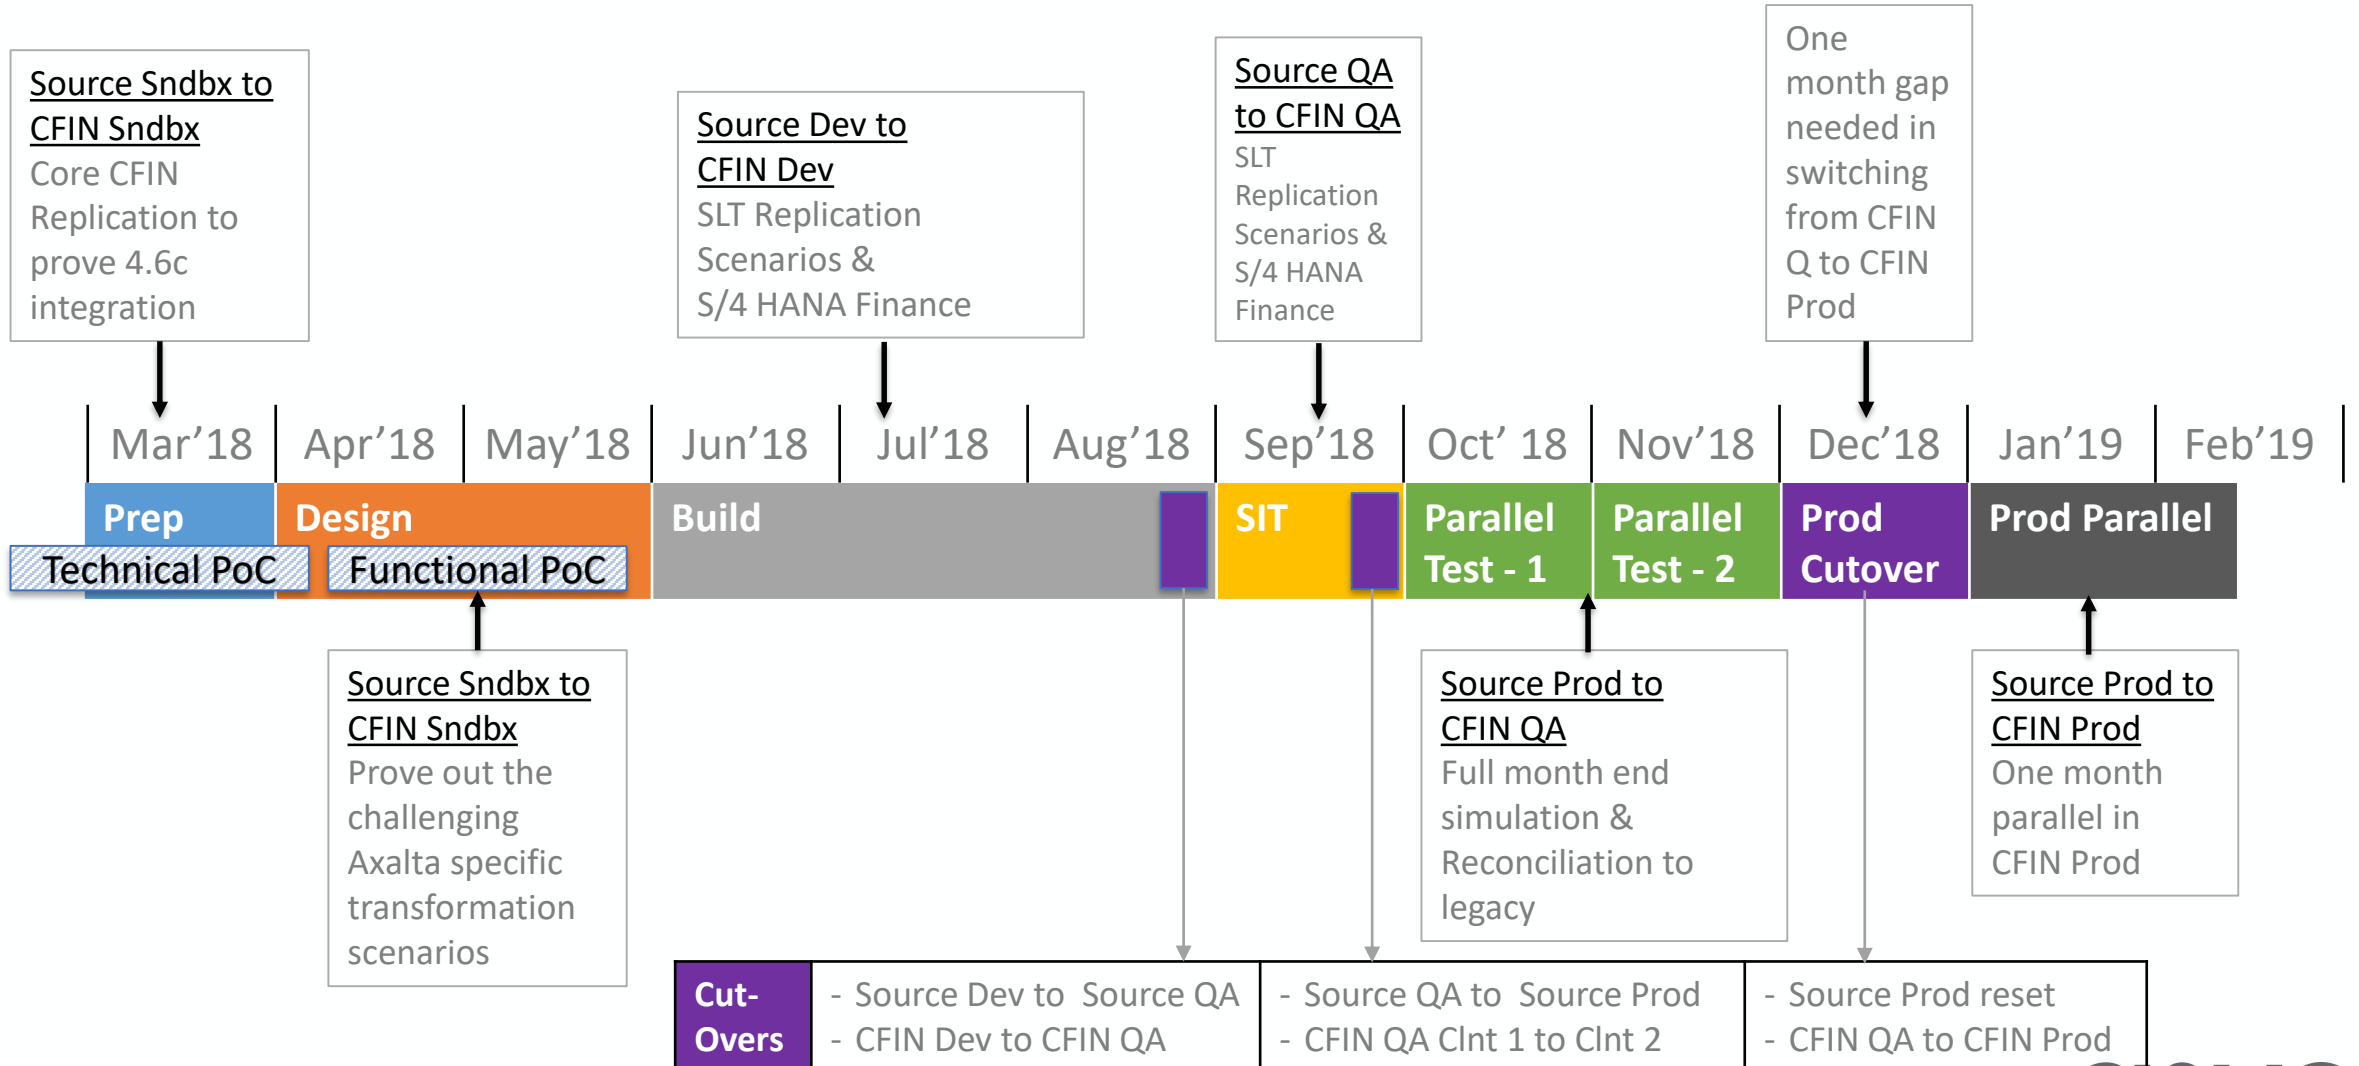

Corporate Reporting System Landscape - After

Process Architecture

Axalta's journey to a successful implementation

Success Factors – Program level

Executive sponsorship and effective governance structure

Business/Finance ownership

Timely decision making

- Timely analysis to facilitate escalation and executive decision making
- It's a democracy, but not everyone gets a vote

Adherence to fit-to-standard principles

- Gaps approved by Operating Committee

Adherence to scope guidelines

Technical PoC prior to project launch

Testing/Validation Methodology

Success Factors – Solution Level

- Flexibility to amend source system
 - Support pack update on source
 - Adding Trading Partner to GL accounts master data
 - Replicating some source system Special Ledger postings to source system FI, instead of creating custom interface from source SPL to CFIN
- Limited Master Data setup
 - Customer/Vendor: only minimum required fields for Client and Company segments
 - Material: only minimum required fields for the Basic Data segment
 - Maintaining flexibility for master data design with full ERP implementation
- Data Migration Cockpit for simple master data loads
- SLT filters for local-GAAP document types and posting date
- Simplified, yet more detailed intercompany master data and postings

Success Factors – Solution Level (contd..)

- Cost object conversion
 - WBS conversion to IOs
 - PP/QM/PM Order and IO many to one mapping, by order type and company code
 - Certain 1:1 order mapping as well
 - Enhancement to derive PC from source posting, for CO internal postings
 - Enhancement to change business transaction type as certain PP Order transaction types are not allowed for Internal Orders
- COPA replication from FI-integrated postings in source
- CO document replication – Cost Center assessments, distributions (including interco) and Cost Center to COPA assessments worked out of the box
- Custom program to toggle AIF message status to be able to re-process documents for testing

Success Factors - Knowing the limitations

For all SAP source systems

-  Document Splitting is not supported
-  Key and Value mappings don't have effective-date feature capability

 Axalta did not implement this feature

 Axalta customized for identified limitations

For ECC 5.0 and lower source systems

-  Source systems below ECC 5.0 are not supported
-  Source system 4.6c needs to be at patch 58 or higher to utilize SAP's source system CFIN code
-  Clearing replication is not supported
-  One-time accounts are not supported
-  Cost component split is not supported
-  CFIN Reconciliation Reports are not supported

Areas of Opportunity – Program Level

Do not underestimate performance requirements

- Replication: number range buffering, bulk processing, non-synchronous updates and fine-tuning of different memory parameters were effective in remediation
- Reporting: avoiding use of certain (performance impacting) front-end features of AFO provided a work-around

Plan, simulate and consider contingencies on design aspects from end to end

- There might be legacy dimensions that you may require full reporting on, decide on coding block accordingly

Plan ahead for conversion to Business Partner

- Overlapping number ranges between customer and vendor in source systems require consideration and appropriate action plans

Historical Load complexity and resource requirement

- As our historical data source was a reporting system and not the source transactional systems, we loaded historical data through CFIN External Interface.
- AR, AP (alternate recon accounts) open items and Cash balance loads added significant complexity to the GL balance conversions
- Special handling of special characters in text fields required due to use of BPC Optimized / Embedded BW

Tail end business processes like FP&A need special attention during the project

Working with ECC 5.0 or lower source systems means you cant expect available CFIN notes to solve known issues

- Manual down-porting and implementation of CFIN notes might be necessary

Areas of Opportunity – Solution Level

- Complexity with handling dependency of reference documents in replication
 - Reversals, clearings and document changes in source system
- Document summarization vs document splitting (999+ items) present significant complexity
- Need to implement the same CFIN transformation/code in up to 3 enhancement spots – FI document, CO document and Non-SAP
- Adding and transferring custom fields (COPA characters) to SLT replication presents technical and master data challenges
- Additional enhancements are required for Non-SAP SLT Interfaces
 - Certain mapping entities are not available i.e. Trading Partner
 - Not all standard coding blocks elements are available in Non-SAP AR/AP interfaces

Central Finance Run & Maintain requirements

CFIN environment maintenance in addition to transactional system maintenance

- Maintaining configuration in sync
 - Limited to replicated Org Units and some document posting configuration
- Maintaining master data in sync
 - Manual upkeep for certain master data
 - Example in Axalta case: GL Accounts
 - Automated interface maintenance
 - Example in Axalta case: Customer, Vendor & Material
- CFIN regression testing for any source system changes that impact document posting
- Environment refresh plans keeping CFIN in perspective

Plan and budget on continuous improvement

- New granular, real-time reporting presents new opportunities for deeper and more meaningful insights

Take the Session Survey.

We want to hear from you! Be sure to complete the session evaluation on the SAPPHIRE NOW and ASUG Annual Conference mobile app.
