Ford's CEO had a charging 'reality check' on his electric F-150 Lightning road trip

Nora Naughton

Updated August 14, 2023 · 2 min read

"Charging has been pretty challenging,"

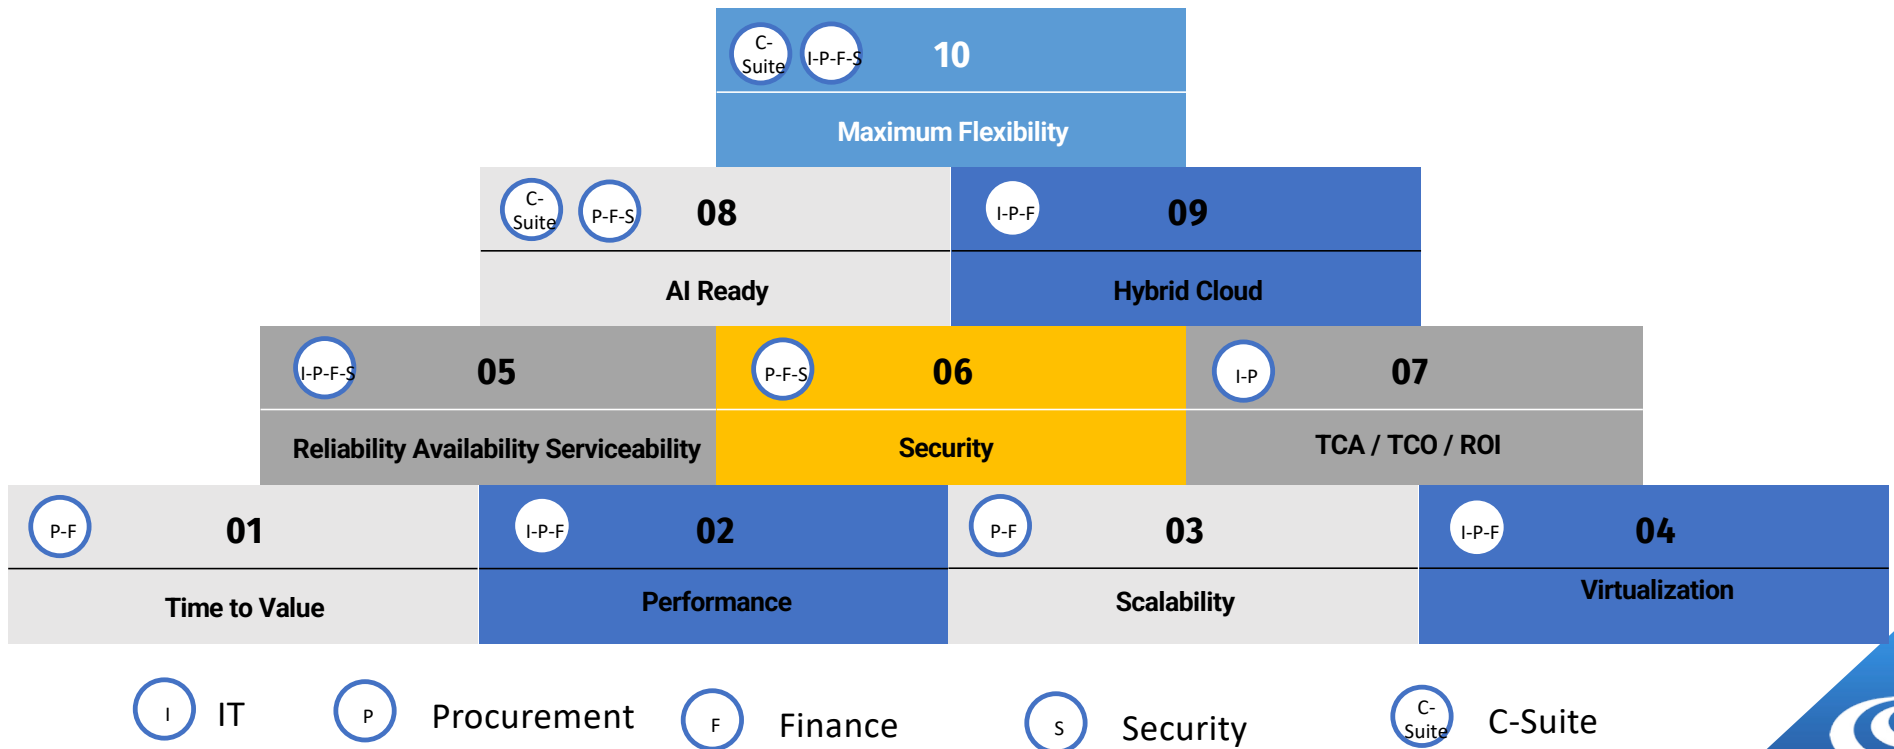

Ford CEO Jim Farley hit the road in an electric F-150 Lightning last week.

Just because companies claim something is the direction everyone is going, or the next wave could also mean it is where they are driving you to versus consumers asking for it.

Customer repatriation of critical Enterprise workloads

"While cloud clearly delivers on its promise early on in a company's journey, the pressure it puts on margins can start to outweigh the benefits, as a company scales and growth slows"

"some companies have taken the dramatic step of 'repatriating' the majority of workloads, or in other cases adopting a hybrid approach. Those who have done this have reported significant cost savings."

"market value is being lost among them due to cloud impact on margins — relative to running the infrastructure themselves. Extending this analysis to the broader universe of scale public companies that stands to benefit from related savings, we estimate that the total impact is potentially greater than \$500B."

"companies need to optimize early, often, and, sometimes, also outside the cloud. When you're building a company at scale, there's little room for religious dogma."

*-- Sarah Wang and Martin Casado,
Andreessen Horowitz Capital Management*

Cloud 'sticker shock' explored: We're spending way too much

'Repatriation' from the cloud on the horizon? Andreessen Horowitz partners discuss the paradox of long-term cloud adoption. 'You're crazy if you don't start in the cloud; you're crazy if you stay on it.'

 By Joe McKendrick for Service Oriented | June 26, 2021 – 11:00 GMT (04:00 PDT) | Topic: Cloud

Cloud computing is probably the biggest business around these days -- it has become a \$100-billion-a-year industry. And there's a chance companies are paying way too much for it.

Cloud \$ Increases

Cloud service firms lock customers in while nickel-and-diming them

Big cloud is upping its prices everywhere. During this period [Microsoft](#) raised the prices of its Microsoft 365 office applications in various countries by about 9%. Its closest competitor in this space, [Google](#), increased its Workspace monthly prices by as much as 20%.

[Salesforce.com](#), the leading provider of customer relationship management products, bumped up the monthly fees on many of its products by 9%.

The largest providers of cloud storage and applications – [Microsoft](#), [IBM](#), [Amazon Web Services](#) and [Google Cloud](#) – all have increased their hosting and storage fees anywhere from 11% to as much as 50% compared with a year ago.

This is a business model unlike anything we've seen in the past and it's awesome ... for the software providers. But what about users? What about my small business?

Let's say you're a company that has invested significantly in one of these cloud platforms to run your business. You've got all your data there. You've built integrations, customizations and specialized applications. You've spent great amounts of money on consultants, experts and trainers to help your employees get the most from these platforms. Like Netflix and [Spotify](#), you're used to these products and value their familiarity. So when there's a price increase you may grumble, but you're not going to change. You know it would be too costly and too disruptive. So you just accept it.

US small business

Cloud service firms lock customers in while nickel-and-diming them

It's a company's dream business model - the services are too difficult to switch, and small price hikes are often overlooked

Gene Marks

@genemarks

Sun 5 Nov 2023 07:00 EST

A business model where a company can increase prices almost at will? That's the cloud. Some say that security of our data is the biggest challenge when hosting in the cloud. But that's not it. For most users, control is the real issue.
