Improve productivity before, during and after your move to SAP S/4HANA

What you can achieve with OpenText Productivity Solutions for SAP S/4HANA:

1. Streamline your data platform: Optimize your data footprint, simplify the move, and access documents right in SAP S/4HANA.

2. Gain intelligent automation: Transform key processes such as order-to-cash and procure-to-pay for better cash positions, cost savings, and customer/supplier experiences.

3. Work from anywhere: Collaborate inside and outside SAP processes with Microsoft 365 integration (including the Office suite and Teams). Control content sprawl with one governed source of truth for all content in SAP and Microsoft 365.

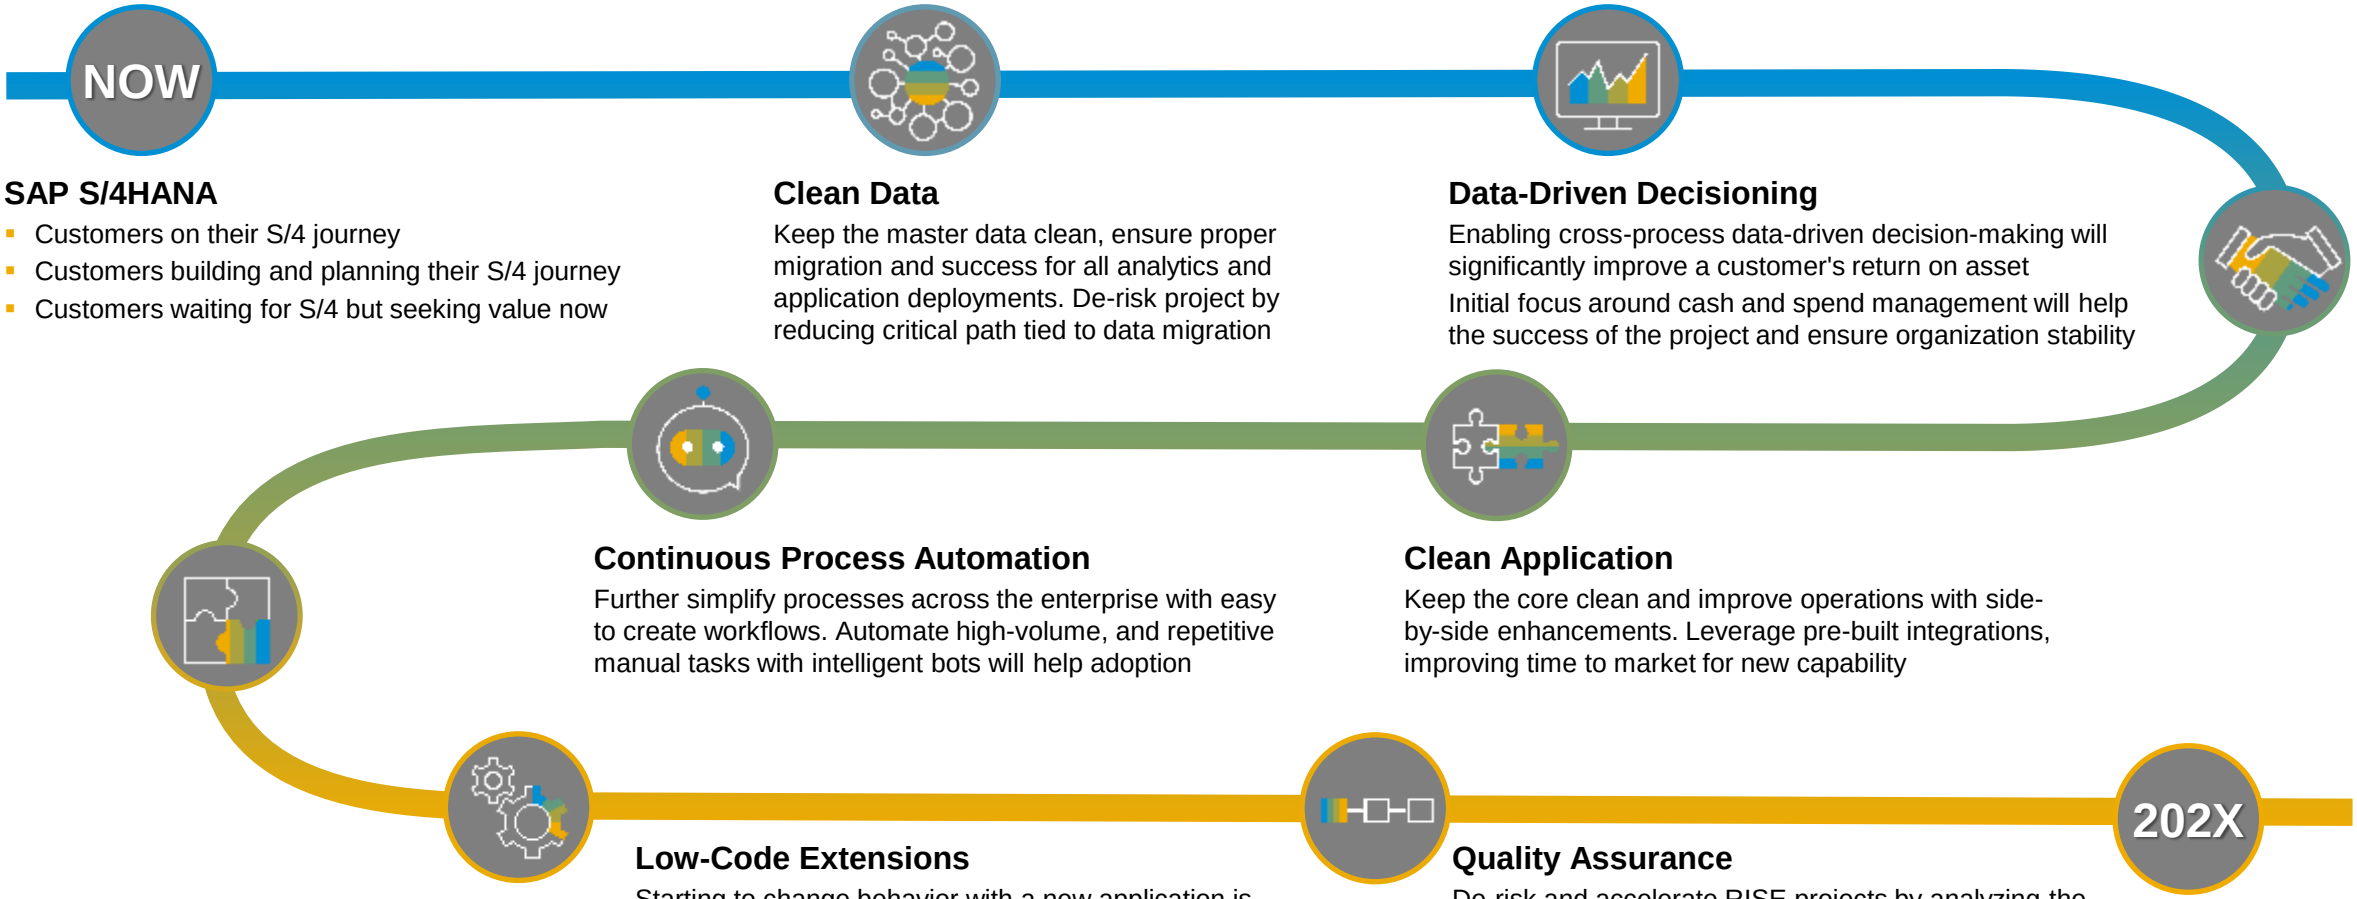
Success Plan for S/4 HANA and RISE with SAP

Prepare*, *Move*, *Run



SAP S/4HANA

- Customers on their S/4 journey
- Customers building and planning their S/4 journey
- Customers waiting for S/4 but seeking value now

Clean Data

Keep the master data clean, ensure proper migration and success for all analytics and application deployments. De-risk project by reducing critical path tied to data migration

Data-Driven Decisioning

Enabling cross-process data-driven decision-making will significantly improve a customer's return on asset

Initial focus around cash and spend management will help the success of the project and ensure organization stability

Continuous Process Automation

Further simplify processes across the enterprise with easy to create workflows. Automate high-volume, and repetitive manual tasks with intelligent bots will help adoption

Clean Application

Keep the core clean and improve operations with side-by-side enhancements. Leverage pre-built integrations, improving time to market for new capability

Low-Code Extensions

Starting to change behavior with a new application is often the linchpin to success. Enabling low-code/no-code solutions help organization deploy new capabilities weekly and keep up with dev backlog

Quality Assurance

De-risk and accelerate RISE projects by analyzing the impact of software changes to better scope and automate what needs to be verified. Ensure that any changes do not break end-to-end business processes, slow application performance, or introduce data errors.

Integrate information into your Enterprise Business Processes

Idea to Offering	Market to Contract	Demand to Deliver	Make to Order	Order to Cash	Procure to Pay	Asset Mgmt.	Record to Report	Hire to Retire

Enterprise Mega-Processes Require Content Enablement

- Managing the Ideation Process and collaboration with content management and workflows
- Managing Project documentation
- Managing Specifications and Design Documents
- Managing Testing, Quality Reports and Procedures
- One unified repository for PLM, ERP and CRM

- Enhancing this with an integrated content generation engine integrated with CRM and ERP for all customer and partner communications
- Providing cross application information and content access to all documents regardless of source

- Organizing and linking related documents in one location providing a complete platform for insights and preventing information sprawl

- Production planning and scheduling documents
- Production execution, monitoring and reporting documents
- Production quality documents
- Manufacturing Record Book consolidation

- Eliminate manual activities
- Reduce cycle times
- Automatic matching of incoming payments against open accounts
- Handle bank statements, remittance advices, lockbox
- Payment Service Provider settlements
- Anti-fraud and anti-money laundering screening
- GDPR reporting

- Reduce cycle times
- Automated data extraction
- Coding and matching
- Touchless processing of invoices
- Pay suppliers faster
- Avoid lost invoices
- Capture early payment discounts
- Complete electronic audit trail

- Intelligent Projects & Operations
- Intelligent & Connected Operations
- Connected Enterprise
- Efficiently control engineering and process documents for large capital projects

- Simplified and controlled report access
- Historic and compliant report management for audit, legal and compliance
- Controlled report generation, delivery, and versioning to reduce system overhead
- Report readiness alerts

- Process costs and efficiencies
- First call resolution
- Access to non-SAP content
- Enterprise-wide records management for all content
- Reduce exposure to litigation / penalties
- Employee satisfaction
- Quick search
