

Kodak's Journey to S/4HANA and the Cloud:

Transforming the SAP back office to help enhance what the world sees and creates

Gabe Mensching

Chief Technology Officer, NIMBL

Darren Shaw

Vice President of Marketing, North America, SNP

What we will cover today

- Company introductions
- Kodak overview
- Project baseline
- Project approach
- The benefits of automation
- Project results
- Lessons learned and wrap-up

About NIMBL

- 2,200+ professionals across 11 countries
- HQ in Denver, CO
- Key focus areas:
 - S/4HANA and cloud migrations
 - Google Cloud Services
 - Digital Advisory Services
 - BI: Analytics and Data Warehousing
 - Application Development and Automation
 - Application Lifecycle Management
- Learn more at <https://www.benimbl.com/>

**ENABLED BY TECHNOLOGY
DRIVEN BY PEOPLE**

About SNP Transformations

- Founded in 1994
- HQ in Heidelberg, Germany
- 3,000 clients, 14,500+ projects
- 1,600 employees in 35+ countries
- Key focus areas:
 - BLUEFIELD™ S/4HANA migrations
 - M&A/D synergy enablement
 - Systems consolidation and harmonization
 - Real-time data integration and archiving
 - Cloud migrations
 - NZDT

Kodak: An overview

- George Eastman put the first simple camera in the hands of the consumer in 1888
- In 1896, Kodak introduced the first capture medium -- a photographic paper -- designed specifically for x-ray images
- Clear focus on their core businesses in commercial print and advanced materials & chemicals
- Leveraging strengths in chemicals, coating technology and roll-to-roll manufacturing to develop long-term growth initiatives

Why the change? Why now?

Drive greater productivity internally and become easier for customers to do business with

- Simplify the IT landscape
- Carve out the necessary data – 15%
- Modernize - move to Azure
- Create foundation for business process improvements
- Upgrade from ECC on Oracle to S/4HANA

The functional and technical landscape

- The broader SAP landscape included BW, BOBJ, CRM, Data Services, GRC, GTS, HCM, Portal, PO, SRM
- The scope of ECC 6 EHP 5 included broad functionality +
 - Classic G/L
 - Hundreds of company codes
 - SD Revenue Recognition
 - Decades of data
- The move to S/4HANA required
 - NewGL
 - Self-Service Procurement + Ariba
 - PLM upgrade
 - Move to RAR

The project spanned twelve months exclusive of hypercare

NIMBL brought in SNP and their CrystalBridge® automation platform to reduce time and cost, and decrease delivery risk

- CrystalBridge® automation was used in part for:
 - Creating hundreds of migration objects
 - Analyzing all hierarchy, master, and transactional data
 - Adding the in-scope org unit to the control system to be used for all modules
 - Selecting and migration only two years of transactional data

Using traditional means, this effort would have taken up to **8X** longer to execute assuming no errors found

The mock runs were used to make the final go-live a non-event – doing more and fine-tuning with each one

Observations/Findings

- Found a gap between the given rules and scope vs. what we implemented
- Found some missing customizing that need it for the S/4HANA system
- The focus was on the quality + enhancement of the objects to reduce the timing

In short: A smooth go-live

- The final results:
 - Technical downtime for SNP activities = 18hrs
 - Business downtime = 54hrs
 - Target system size reduced by 85%
 - 90% of company codes removed from the live system
- SNP finished ahead of plan by six hours - giving more time to Kodak for business validation
- Zero SNP defects from the final dry run helped the broader team focus on the cut-over plan
- Business users were happy because they didn't have to fill in any templates or provide additional information after the workshops (i.e., typical Greenfield effort)
- No urgent phone calls from the CFO/auditors

Lessons learned

- Test Test Test – particularly when adding advanced functionality to the scope of the migration project
- Choose carve-out criteria carefully - keep it simple and stick to it
- Rationalize customizations
- Don't underestimate the Basis and infrastructure support needed
- While it is possible to go live at any time, best to go-live on a year-end boundary if you are a public company – it makes SOX and auditing less challenging

Feel free to contact either one of us for more information about our respective organizations and capabilities
