

City of Tacoma's Journey to a Modern Analytics Program

ASUG Seattle Chapter Meeting
April 20, 2022

About Tacoma

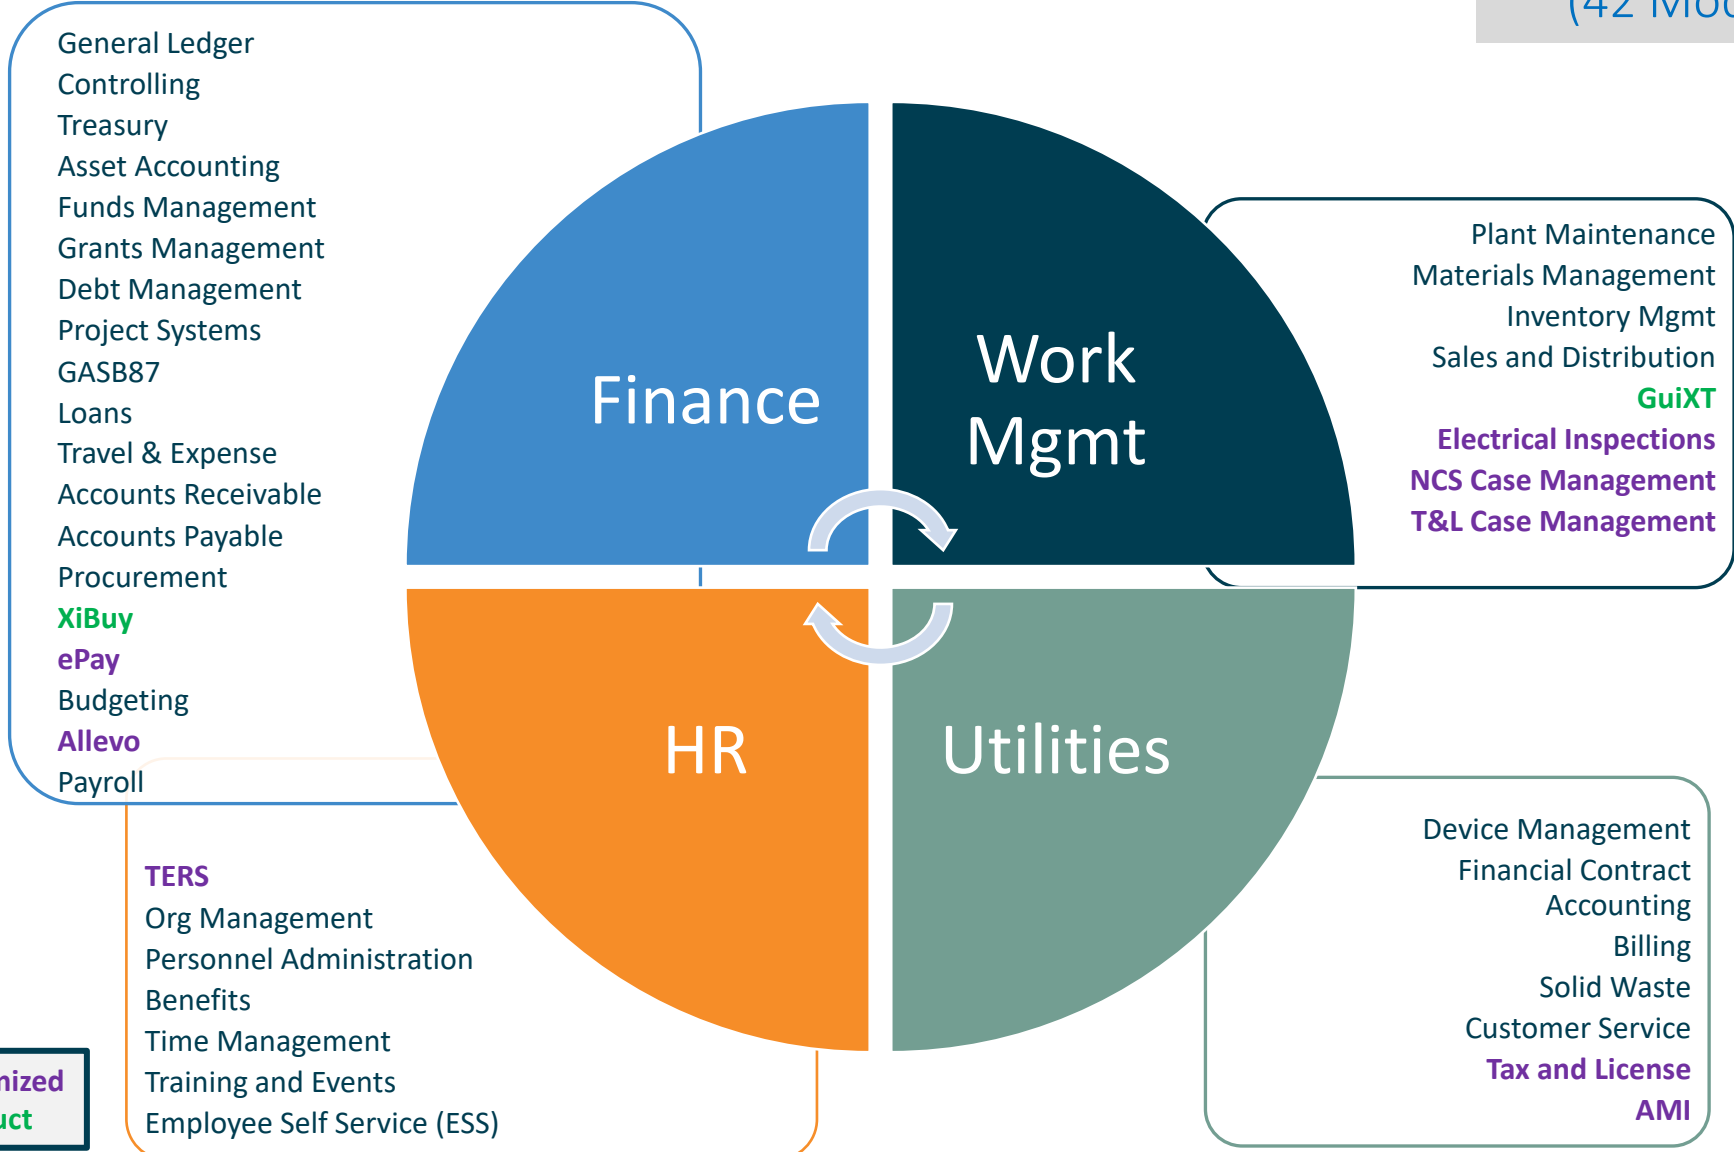

- **Municipal Government and 5 Utilities**
- **~220k residents**
- **~187k utility customers**
- **~3,600 employees**
- **26 distinct departments**
- **27 Unions**
- **~2,952 pensioners.**

Yes, a pension!! We are hiring!

SAP at City of Tacoma

SAP Suite on HANA
(42 Modules)

- Heavily customized
- 3rd Party Product

SAP at City of Tacoma

- StreamServe
- Property Mgr(2)
- Revenue Collector
- Waterscope

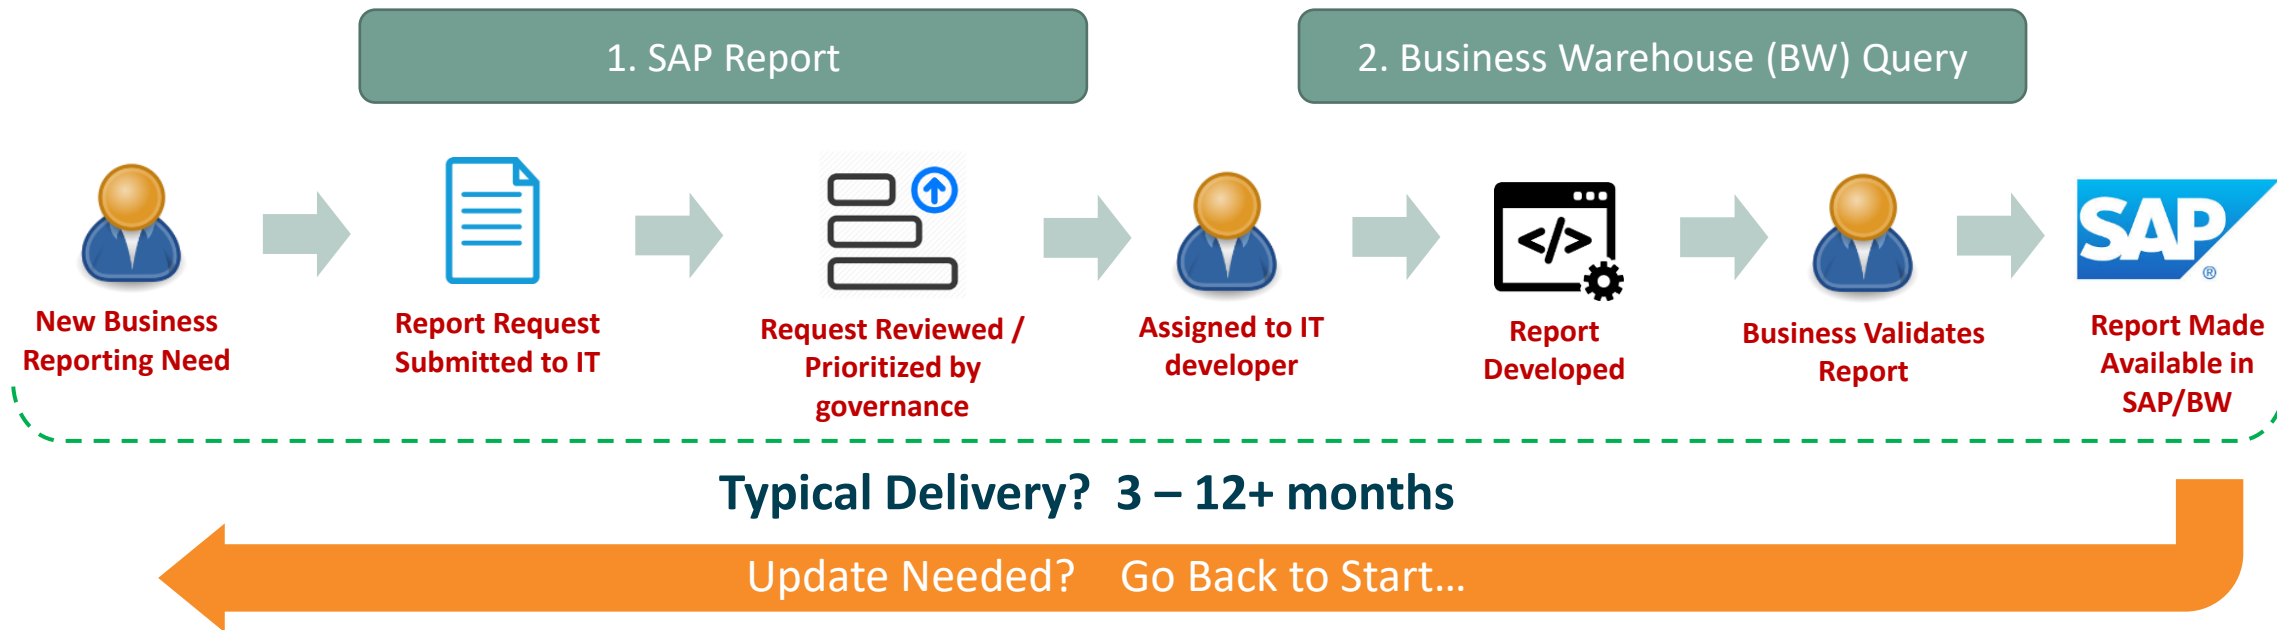

Business Problem

- **The City's Business Warehouse was not widely used – approximately 40 consistent users**
 - Live SAP reports had been favored to do most of the reporting
 - The City never switched from BEx to BOBJ, so reporting was antiquated
 - Data is "locked" inside BW and is very difficult to join it with non-SAP datasets
 - Many users simply ran BW reports so they could export the data to Excel/Access for analysis
- **Our BW version was coming up on End of Life, and either need a major upgrade, or replacement**
- **Wanted to reduce reporting load on the SAP system**
- **It was decided that a cloud-based reporting platform would suit our needs best**

Former SAP Reporting Process

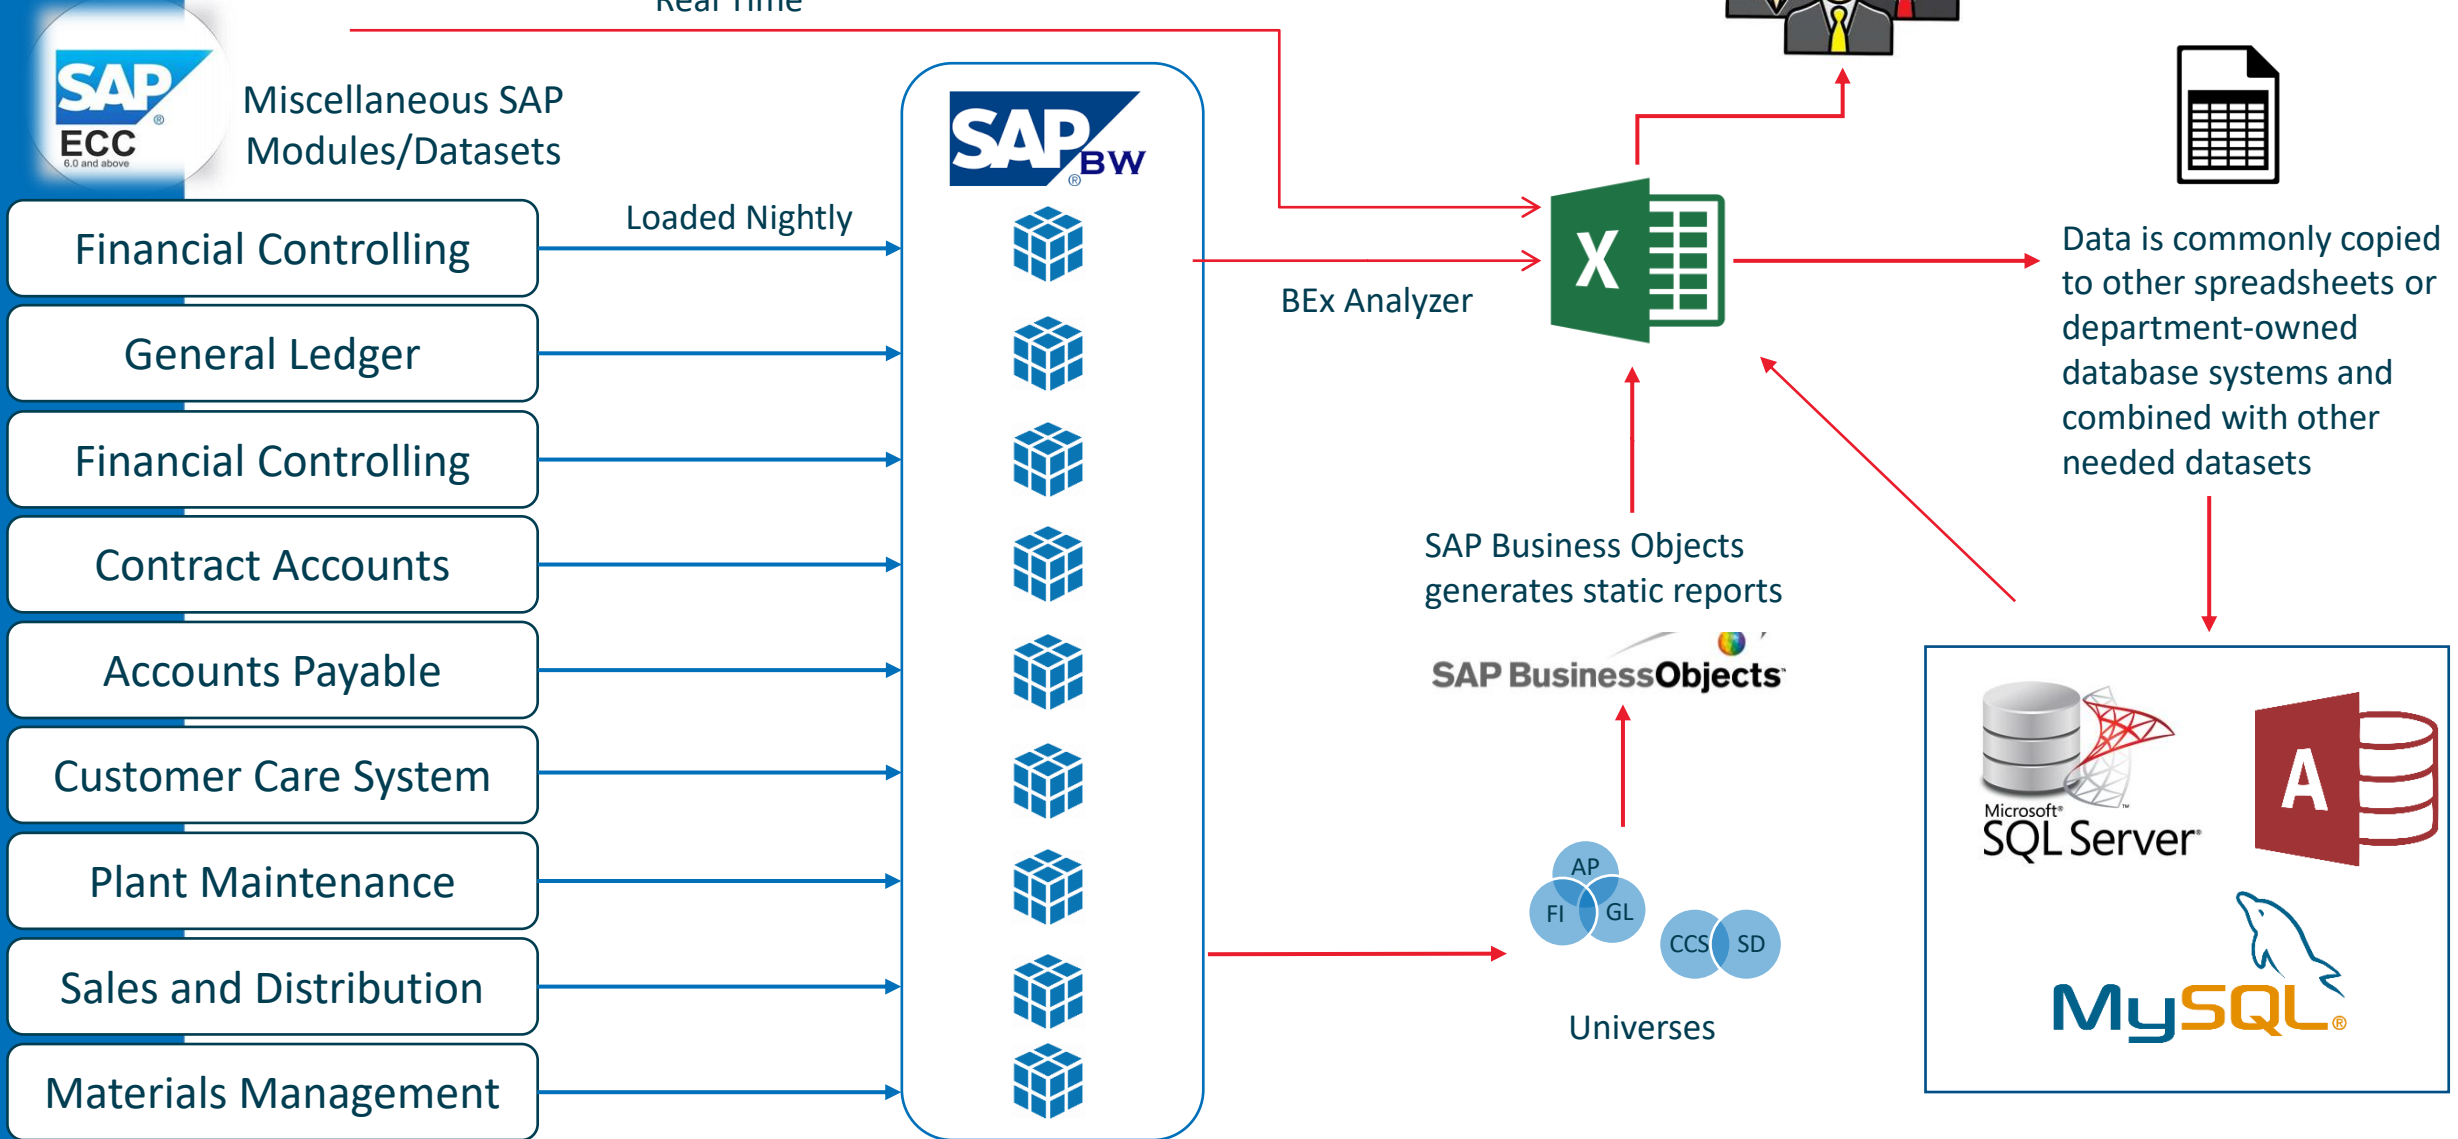

- Process is slow and resource intensive
- Doesn't support urgent or changing business needs
- Provides access to SAP information (only) in MS Excel

Former Architecture

Real Time

Miscellaneous SAP Modules/Datasets

Loaded Nightly

BEx Analyzer

Data is commonly copied to other spreadsheets or department-owned database systems and combined with other needed datasets

SAP Business Objects generates static reports

SAP BusinessObjects

Universes

The Project

HANA + Analytics = Hanalytics!

- Phase 1 – Needed a new analytics platform
- Phase 2 – Start with finance general data enablement
- Phase 3 – Customer data general data enablement
- Phase 4 – PM data and the rest of BW stragglers*

*Stragglers ended up being a huge chunk of work!

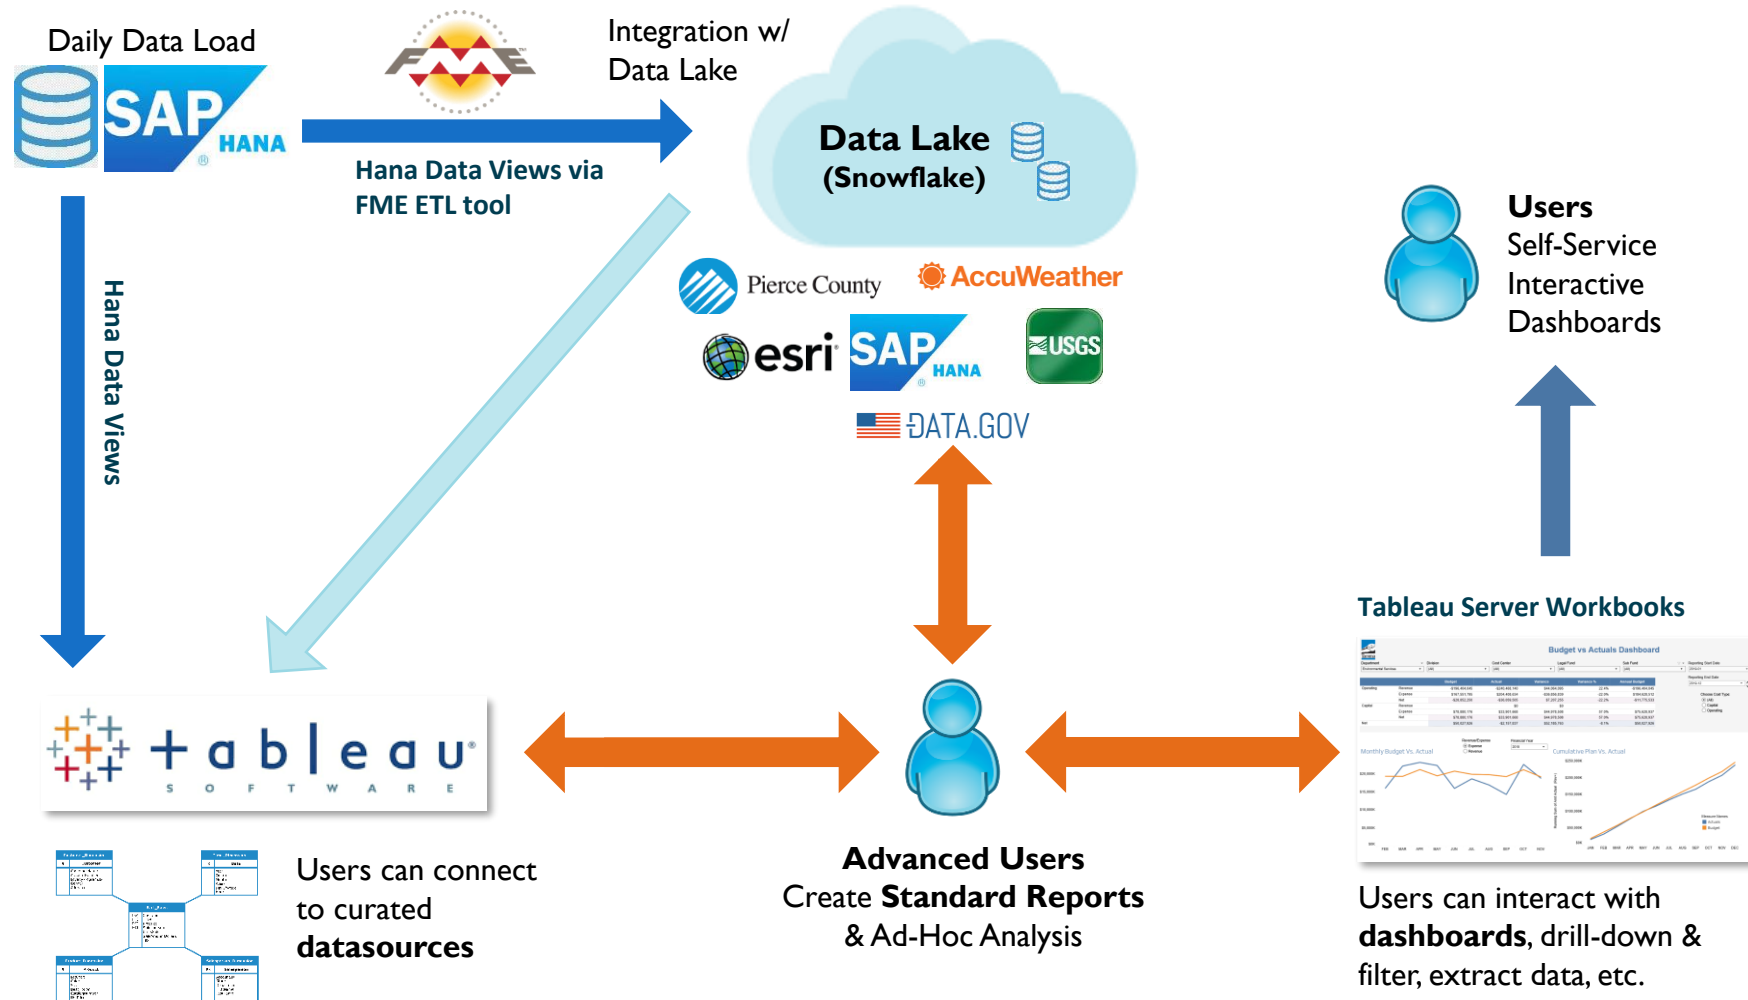

Large Organizational Impact

- **All 26 distinct departments were impacted**
- **27% of staff were impacted stakeholders**
- **Integration of Change Management at initiation due to scale and scope of project**
- **Shift from having no centralized analytics program to emphasis on 'data-driven' decisions during these 'unprecedented times'**

Solution Overview

Hanalytics Deliverables

- **Hana Data Views**
 - 65 Phase 2 Views
 - 76 Phase 3a Views
 - 38 PM & BW Retirement Views
 - 511 Underlying Private & Re-Used Views (building blocks)
- **154 Snowflake Data Views**
- **FMEs Workspace / Automation**
 - 255 (estimate) SAP to Snowflake Feeds
 - 7 Other (e.g. Interfaces)
- **Datasources**
 - 11 Enterprise Tableau Datasource
 - 5 Snowflake Datasources
 - Hundreds of Tableau Datasources (Operational, unique requirement, and One-Off)
- **17 Enterprise Reports**
- **Hundreds of Department Reports Utilizing Hana Data**

Over 1,000
assets created
by the project
and the
analytics
community!

Report Examples: Customer Payments

Report Examples: Customer Payments

Challenges

- No clear data owners/stewards of the data or the assets being created by the project
- Many SMEs with different processes and different business requirements
- Change management for hundreds of stakeholders in departments across the City
- Project team resources changed over time
- Business users largely unfamiliar with the tools and in some cases, the data
- Trying to define an analytics program and select a tool while executing the project

Successes

- Huge growth and interest with intentional investment into Community of Practice and cross divisional support
- Analysts have access to data they never had before
- Partnership with department members embedded in project
- 40 users on BW vs 900 users on Tableau
- 4.8 billion rows, 240GB in Snowflake
- 48k FME jobs per year
- City-wide expertise in a single query tool – Tableau
- Less load on SAP and fewer exported datamarts
- No longer 3-12 month turnaround time, now fully self-service
- Able to use analytics tools for project management rather than MS Project

Lessons Learned

- Lots of executive and departmental support was key
- Data ownership is important; data stewardship is critical
- Data cleanliness – At the start of every project people say they're going to clean up data and processes – they don't
- Ensure project team members are dedicated to the project without competing priorities
- SAP data is way more complicated than you expect
- Prioritize what's important (44 Fact tables in CCS...can't do 'em all)
- Success hinges on a partnership between IT and the Business
- Defined use cases are much easier than general data enablement
- No tool is perfect, so you make the best with what you have
- You can always build on things after go live

Thank You!
