Getting started with SAP BTP Enterprise Account

[Start Mission](#) [View Walkthrough](#) [More](#)

Rehau implemented similar use cases

[Overview](#) [Project Board](#) [Resources](#) [Support](#) [Customer Stories](#) [Related Missions](#)

Use Case

Your company has acquired an SAP Business Technology Platform Enterprise Account (a global account of type enterprise, not trial). You have received two initial emails and you now want to start using the platform. What are the first steps you need to perform in order to onboard to your SAP BTP Enterprise Account? What are the initial administrative tasks and decisions which need to be made? This first mission for new enterprise accounts will help answer these questions. You will learn how to set up your global account, sub-accounts, check your entitlements, set up quotas, and start leveraging your SAP BTP Services.

Current Position - What is the challenge?

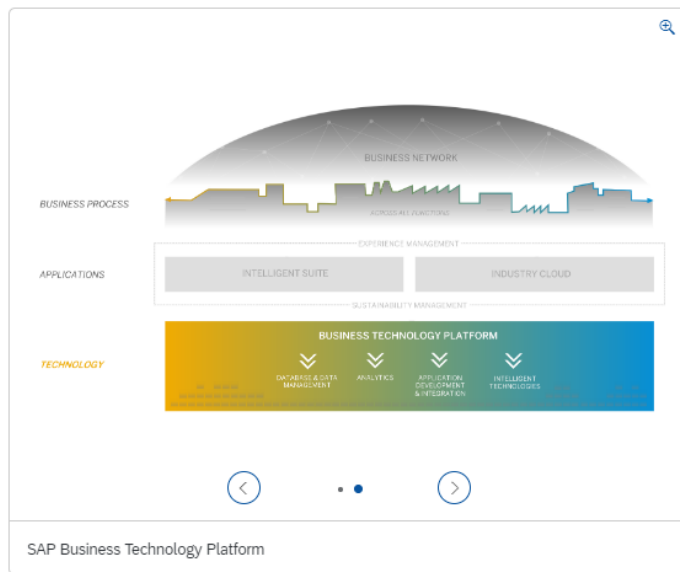

You have a new enterprise account and are ready to get started. Your global account is either exclusively configured for SAP BTP Enterprise Agreement (CPEA), SAP Pay-As-You-Go, or subscription-based licensing. In some cases, customers can also have a combination of consumption-based (CPEA or PAYG) with subscription-based licensing in one global account, please reach your account executives to know more.

Destination - What is the outcome?

Leverage the power of the SAP BTP as integration and extension platform built for the Intelligent Enterprise. Connect your landscape and create application extensions, which focus on your business needs.

How You Get There - What is the solution?

Get started with your new SAP BTP Enterprise Account by assigning global administrators, creating sub-accounts, checking your entitlements, and assigning quotas.

About Missions

Missions include best practices and step-by-step guidance for implementing use cases, with a well-established support from mission experts and SAP Community.

What it can do for you?

Starting a mission enables you to:

- Customize for your business needs
- Collaborate with your team members
- Connect with experts.

Please note that this is FREE of cost. To learn more about missions, visit our [Help Center](#).

Go ahead, start your mission for FREE!

Services and Components [View Estimate](#)

SAP BTP, ABAP environment OPTIONAL	Develop ABAP cloud apps and extensions, leveraging innovations of SAP HANA.
SAP Custom Domain Service OPTIONAL	Configure and expose your application under your own domain.
SAP BTP, Cloud Foundry Runtime	Operate polyglot applications.
SAP BTP, Kyma runtime OPTIONAL	Extend SAP solutions using cloud-native microservices and serverless Functions.

[SAP Discovery Center - Getting started with SAP BTP Enterprise Account \(cloud.sap\)](#)

Process and approve your invoices with SAP Process Automation

[Start Mission](#) [Demo Video](#) [More](#)

[Overview](#) [Project Board](#) [Resources](#) [Support](#) [Related Missions](#)

Use Case

Improve the efficiency of invoice processing for further posting to your transactional system with SAP Process Automation. Throughout the mission you will create a process, where you would combine forms, where you can provide the input data or review the information in order to approve or reject it, automation, allowing you to extract invoice data using embedded Document Information Extraction service, and approval flow to define the rules on how to select the approver.

Current Position - What is the challenge?

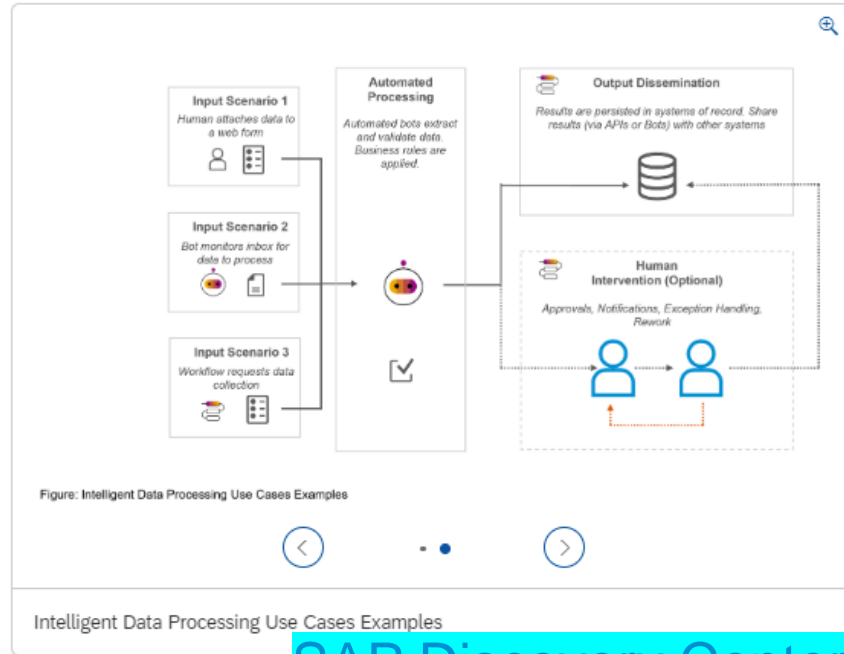

Extracting data from PDFs or images throughout the process is tedious work: the person needs to retrieve the data out of the document and enter into the target system. When it comes to processing a large number of documents it especially becomes a big challenge and requires a lot of time dedicated to this task. Also manual matching is repetitive and error-prone.

Destination - What is the outcome?

SAP Process Automation on the SAP Business Technology Platform combines the Workflow and RPA capabilities in an easy-to-use, no-code AI-powered experience. As one of the scenarios, SAP Process Automation allows you to automate the process of data extraction from various documents with the help of embedded Document Information Extraction service. It helps to improve accuracy and productivity, increase speed in processing documents and free up time for higher value tasks.

How You Get There - What is the solution?

Learn how to implement SAP Process Automation in order to extract the data of documents and extend it with the approval flow before posting the data to the target system. Leveraging the power of no-code, citizen developers can build, adapt, improve, and innovate business processes with minimum assistance from IT resources. Follow the mission steps and create your first process with SAP Process Automation.

About Missions ✕

Missions include best practices and step-by-step guidance for implementing use cases, with a well-established support from mission experts and SAP Community.

What it can do for you?
Starting a mission enables you to:

- Customize for your business needs
- Collaborate with your team members
- Connect with experts.

Customer Stories

Features

SAP Intelligent Robotic Process Automation lets you automate enterprise business processes. Design process automations with the Desktop Studio by creating end-to-end scenarios. Import these scenarios into the cloud Factory powered by SAP BTP to configure and execute them with Agents. Agents running on workstations can work as a Digital Assistant (attended automation) or as a Digital Worker (unattended automation).

Desktop-based process automation design.

SAP Intelligent Robotic Process Automation provides a software component installed on a supported OS that you use to author a process automation.

Integration of third-party technologies.

Integrate third-party technologies to capture, record, and integrate actions with the SAP Intelligent Robotic Process Automation Desktop Studio.

Visual Debugger for process automation.

Debug your process automations on both local and remote clients thanks to the SAP Intelligent Robotic Process Automation Desktop Studio.

Cloud-based Orchestration.

Manage Environments, Hierarchies and Trust relationship with the cloud component SAP Intelligent Robotic Process Automation Factory, built on SAP Cloud BTP.
