

ABAP Cloud & ABAP RESTful Application Programming Model (RAP) Overview

ABAP Platform Product Management, SAP
May 2023

PUBLIC

Agenda

INTRODUCTION

BIG PICTURE

BUSINESS OBJECTS

BUSINESS SERVICES

SUMMARY

INTRODUCTION

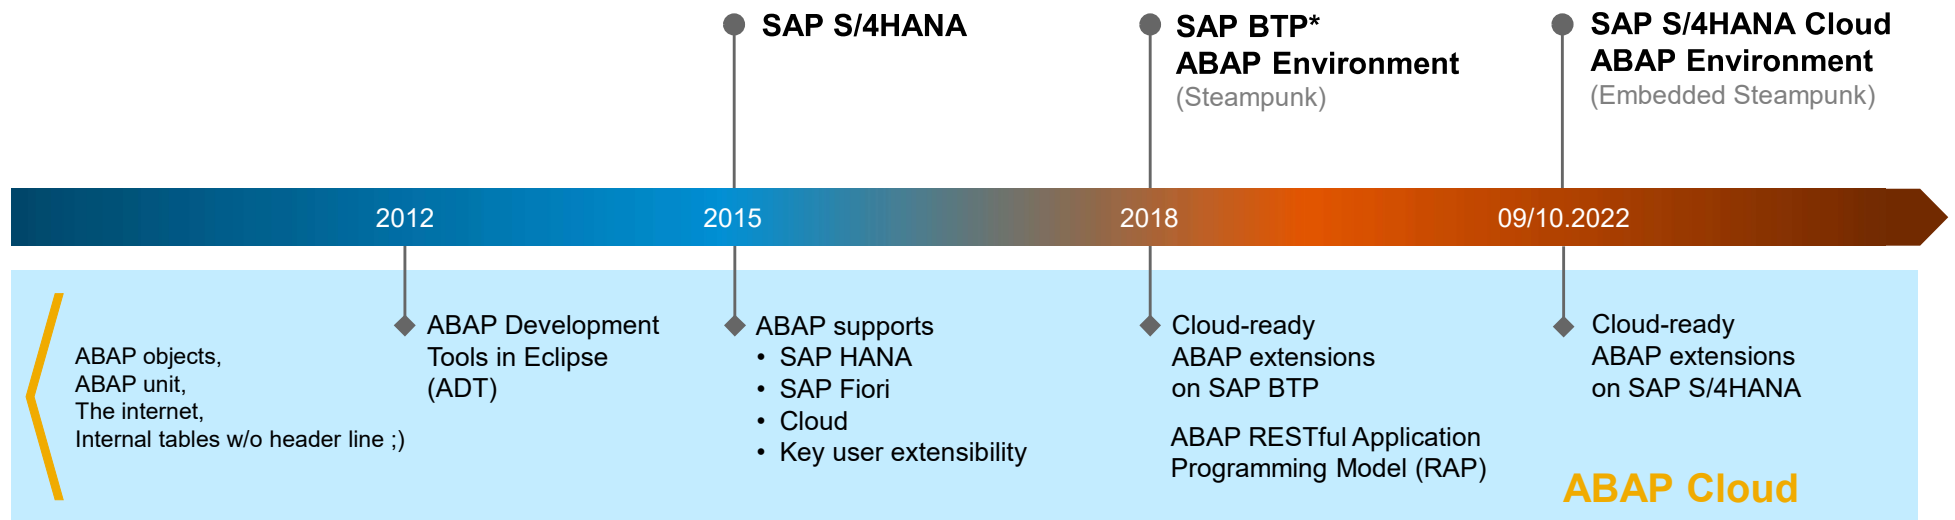

Clean core with the ABAP cloud development model

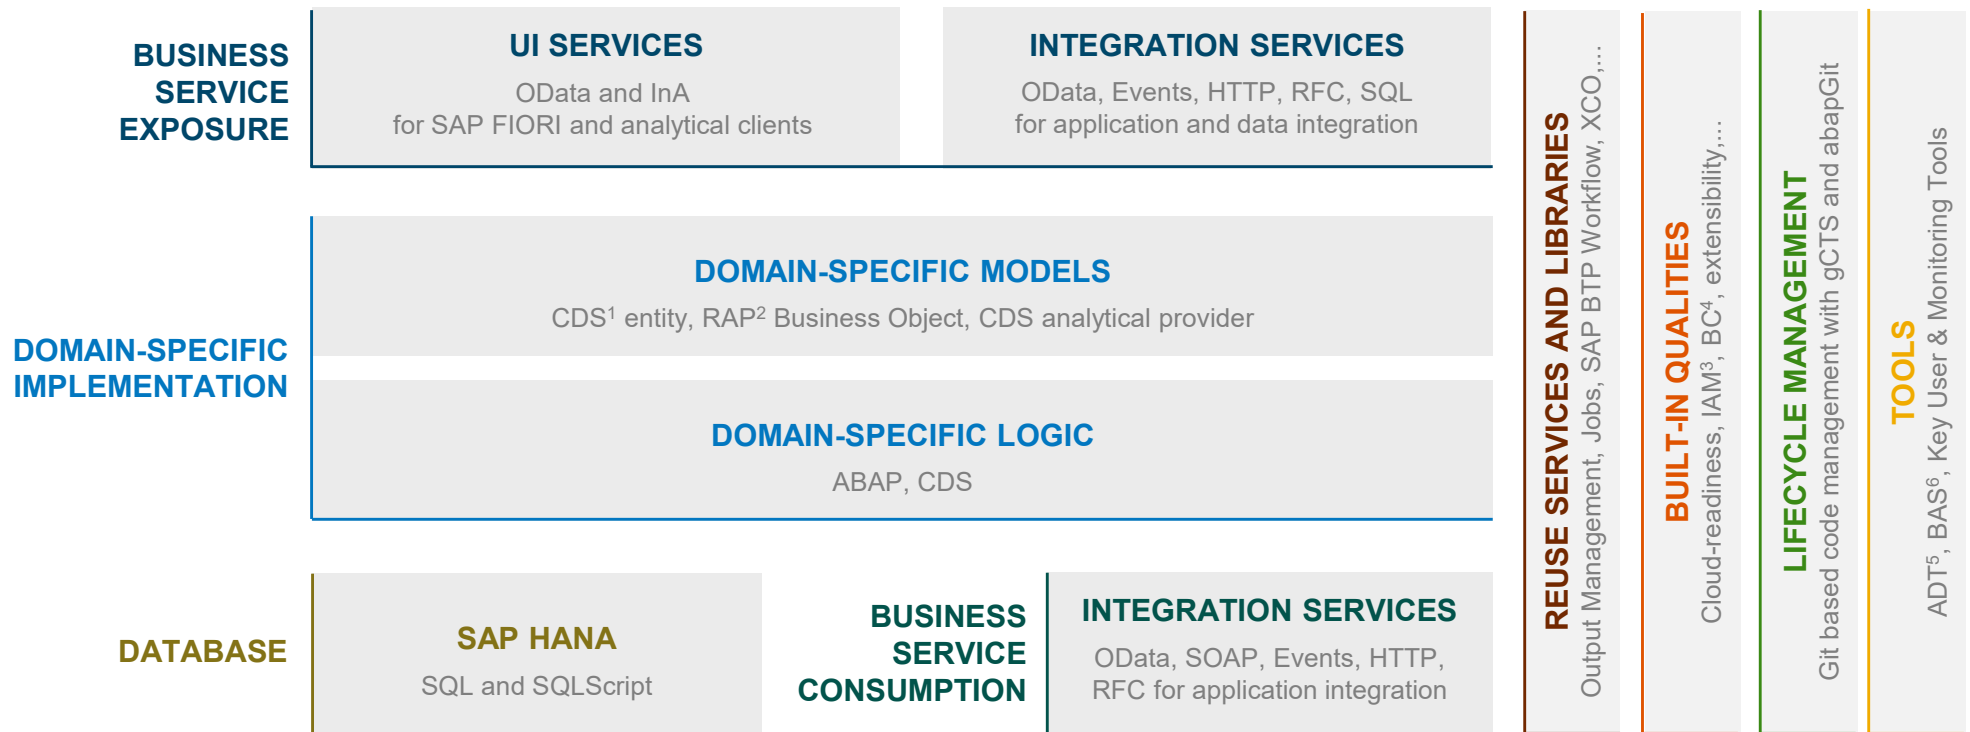

ABAP Cloud

- ... is the ABAP **development model** to build cloud-ready business apps, services and extensions
- ... comes with SAP Business Technology Platform (BTP) and SAP S/4HANA
- ... works with public or private cloud, and even on-premise

The evolution to ABAP Cloud

ABAP Cloud at a glance

¹ Core Data Services

² ABAP RESTful application programming model

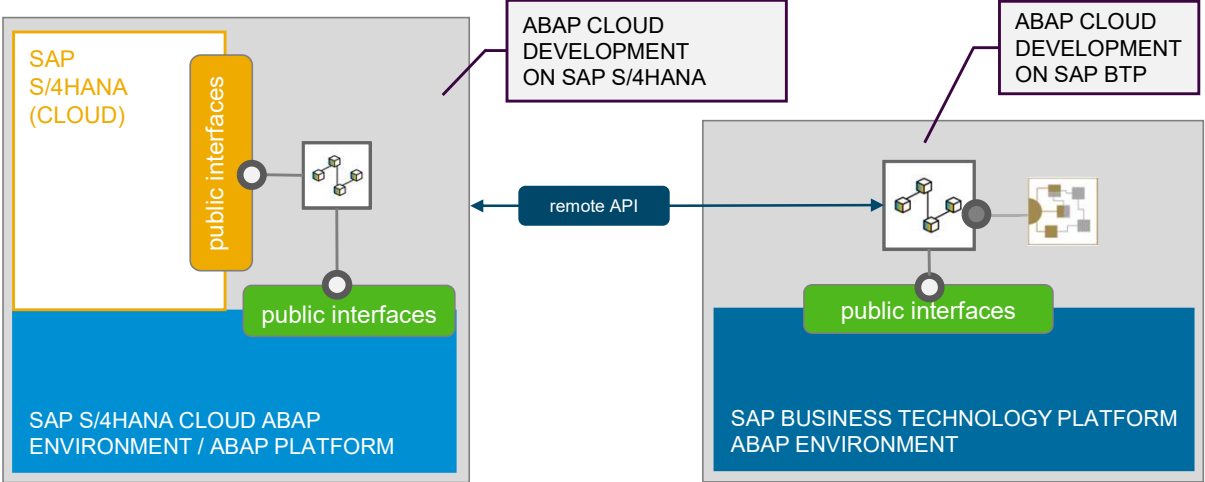

³ Identity & Access Management

⁴ Business Configuration

⁵ ABAP Development Tools

⁶ Business Application Studio

Availability of ABAP Cloud

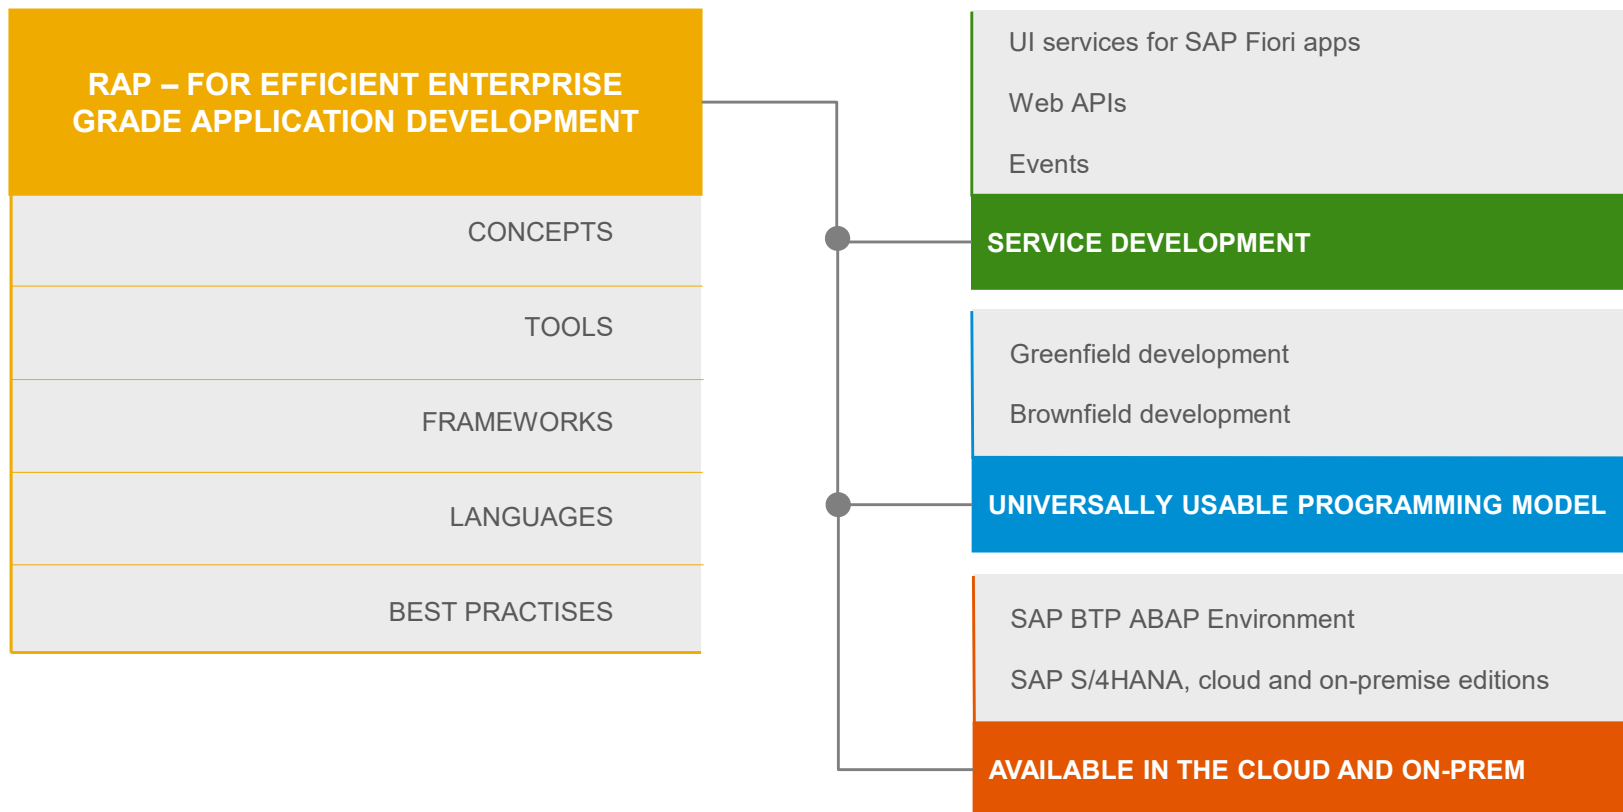

ABAP CLOUD IS AVAILABLE IN THE FOLLOWING PRODUCTS

PRODUCT	RELEASE	ABAP CLOUD USAGE
SAP BTP ABAP Environment	All	Mandatory
SAP S/4HANA Cloud, public edition	≥ 2208 (new customers)	Mandatory
SAP S/4HANA Cloud, private edition and SAP S/4HANA on-premise	≥ 2022	Recommended *

* Classic ABAP can still be used

ABAP RESTful Application Programming Model (RAP) at a glance

The centerpiece of ABAP Cloud for building transactional apps

The key players

ABAP Development Tools in Eclipse for all development tasks

Easy developer onboarding
End-to-end development flow

Languages: ABAP and Core Data Services (CDS)

Standard implementation tasks via typed APIs supporting
static code checks, auto-completion, element info

Powerful frameworks

Take over technical implementation tasks
Business logic added in code exits on protocol-agnostic layers

Efficient ABAP development in Eclipse[®]

HIGH DEVELOPER PRODUCTIVITY WITH THE ABAP DEVELOPMENT TOOLS (ADT) ON-PREMISE AND IN THE CLOUD

MODERN DEVELOPMENT TOOLSET

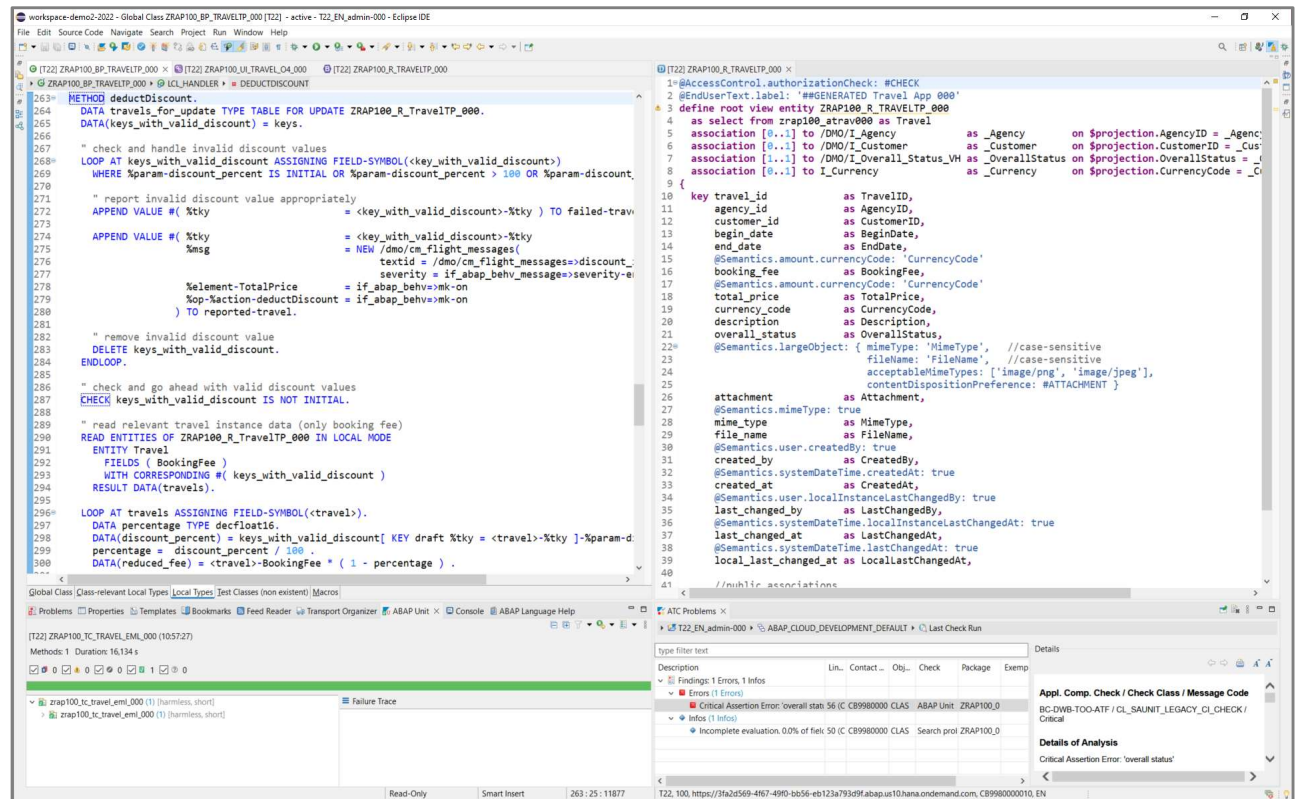

- Fully eclipse-based
- Syntax check, Code completion
- Navigation, Search, Quick Fixes
- Full support for the ABAP RESTful Application Programming Model and CDS

QUALITY ASSURANCE

- Static code checks (ATC, CVA) with remote and local scenarios
- Unit testing incl. isolation frameworks
- Test seams and injections

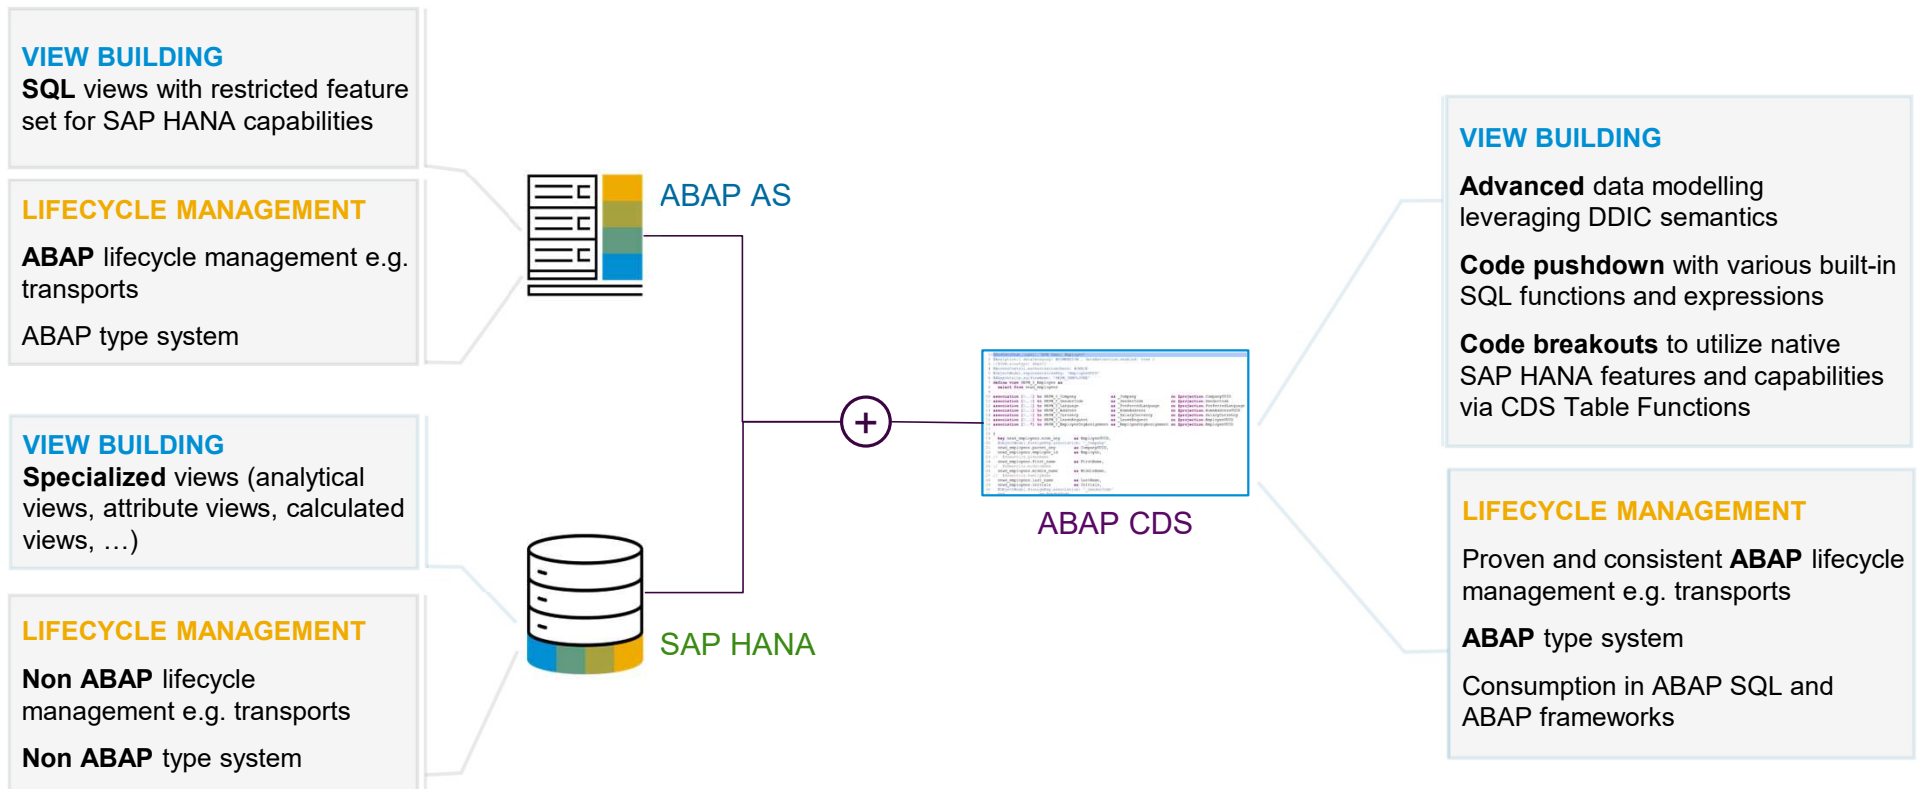

SUPPORTABILITY

- Debugging, profiling, tracing
- Static and dynamic logging
- Runtime monitoring and analysis

Next generation data modeling and access with ABAP CDS

Combine the best of both worlds

Declarative and expression-oriented ABAP language

MODERN ABAP

Simple and concise ABAP code through new language features like inline declarations, constructor expressions

Extensively expression-oriented syntax

Advanced table operations like CORRESPONDING() operator, grouping and filtering

Entity Manipulation Language (EML) to control the transactional business object behavior in the RAP context

JSON support in sXML library

Inline code documentation with ABAP Doc

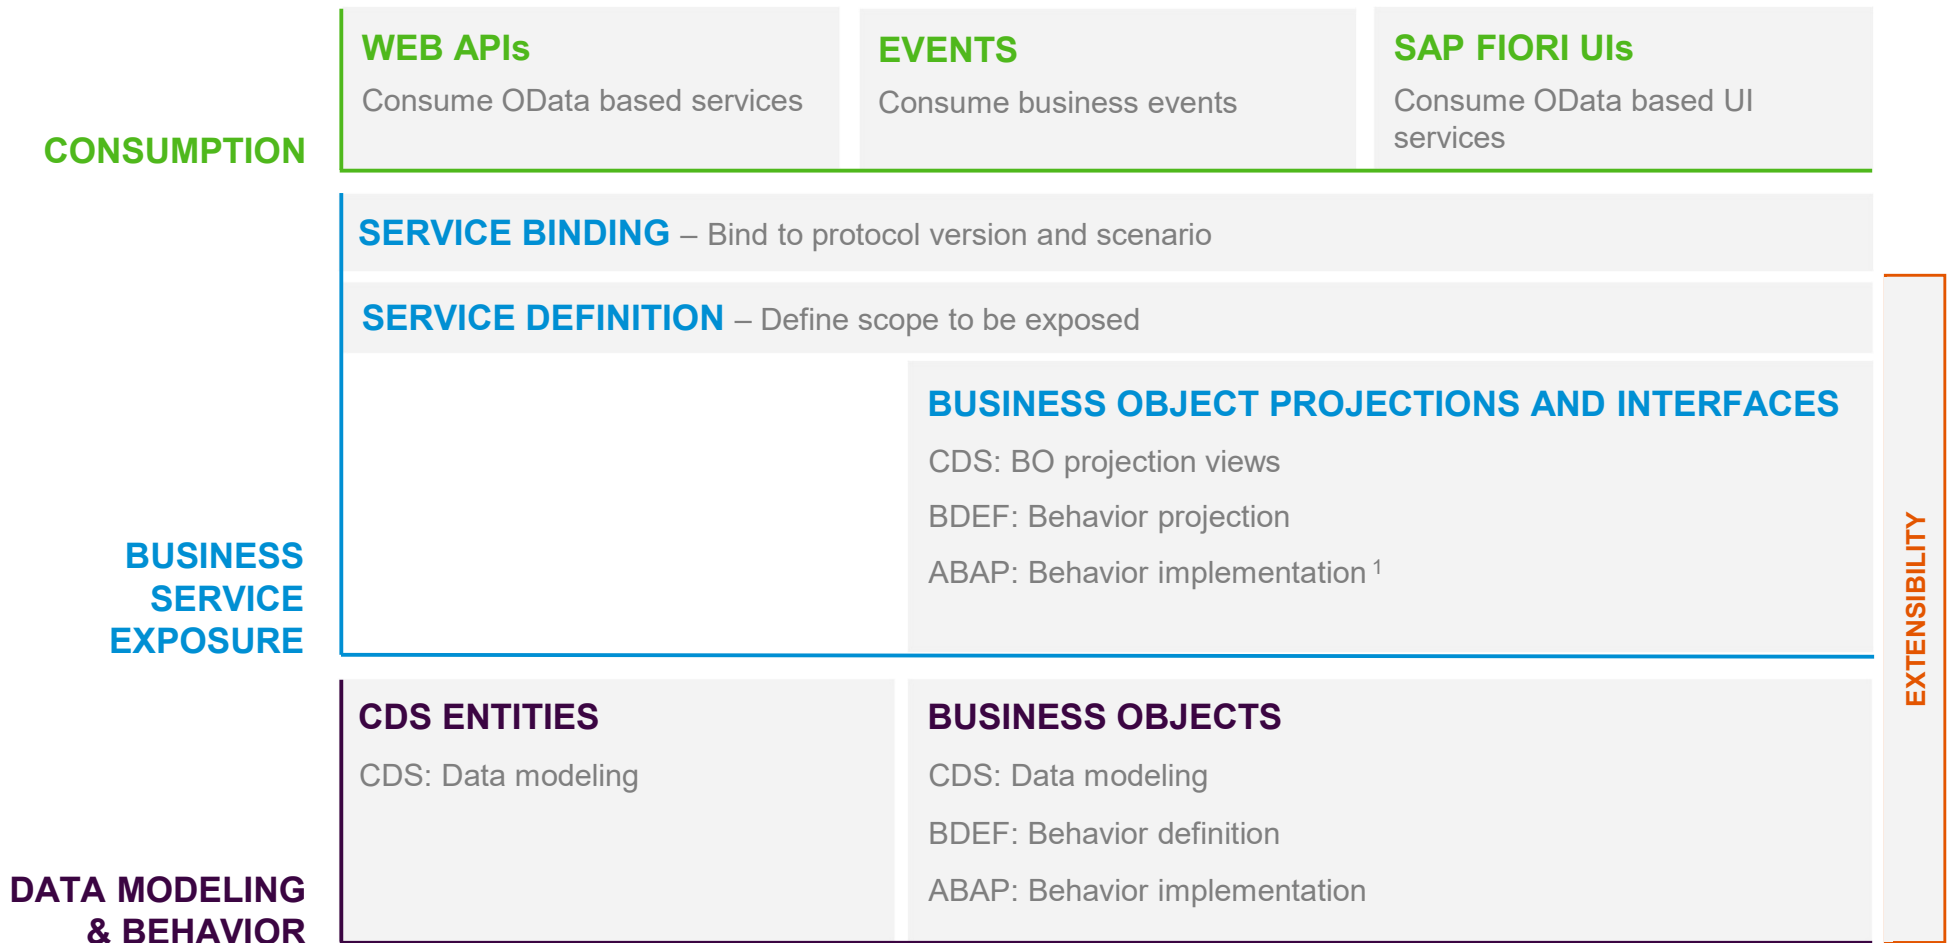

ABAP Unit Testing with test doubles and test seams

[ABAP Keyword Documentation](#)

BIG PICTURE

RAP – The big picture

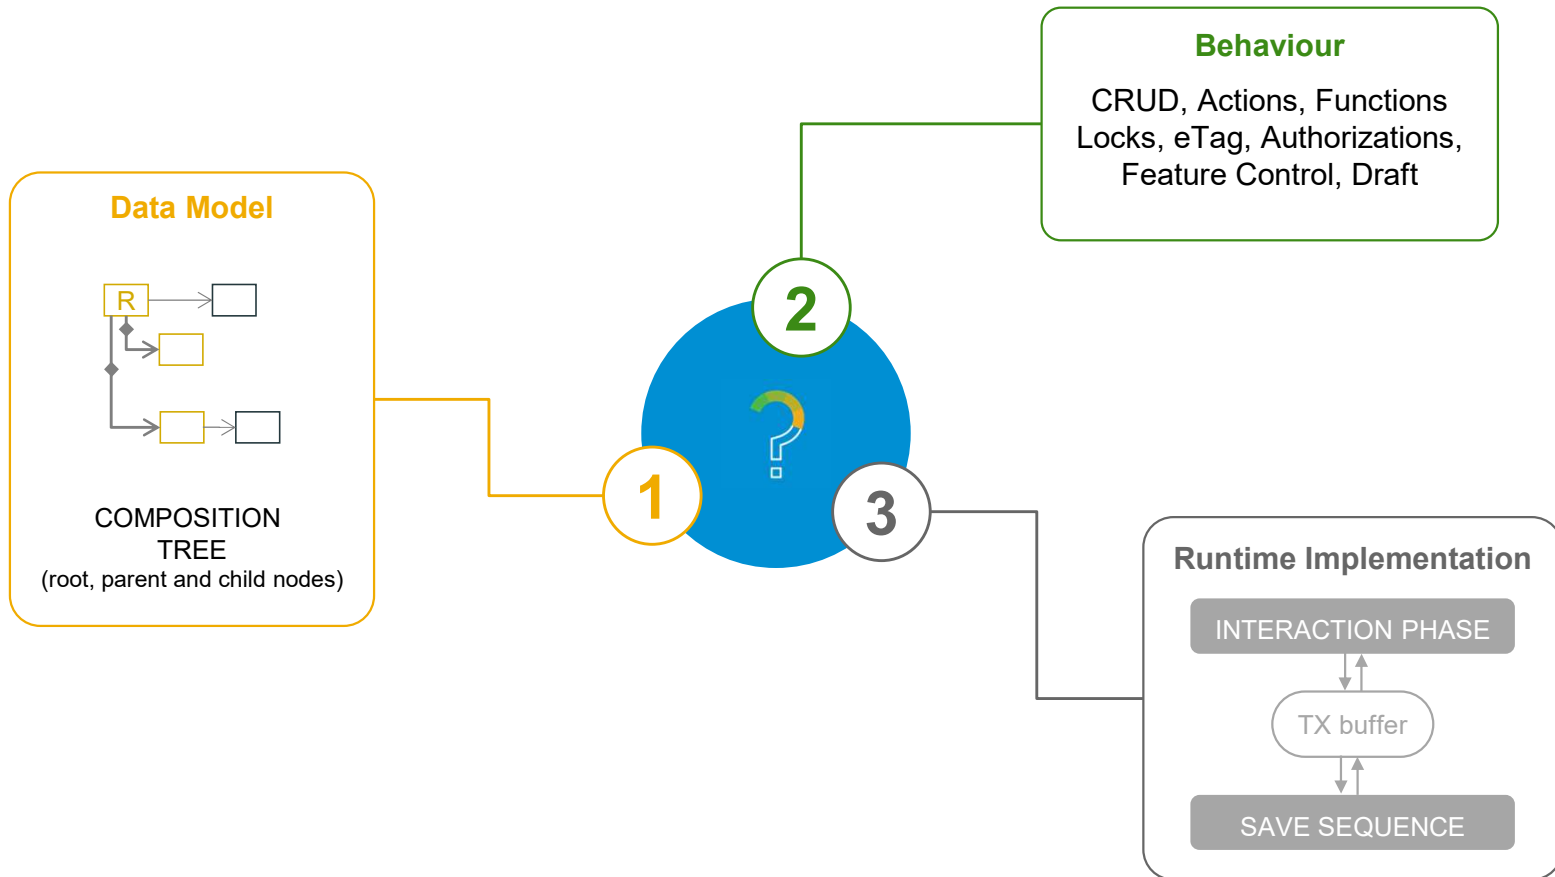

EXTENSIBILITY

¹ Not applicable for RAP BO interfaces

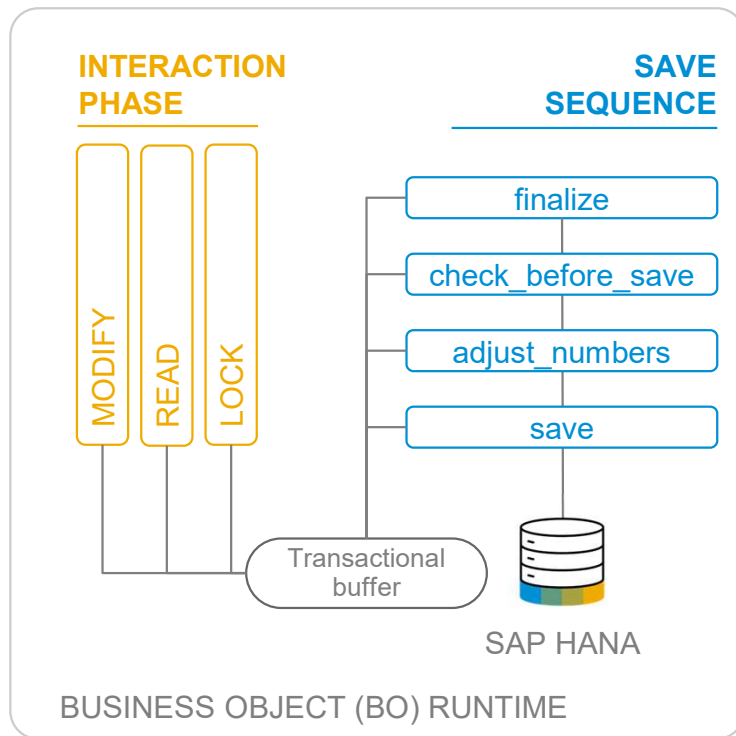

BUSINESS OBJECTS

What is a business object (BO) ?

BO runtime implementation types

UNMANAGED

For **brownfield developments** with available application code for interaction phase, transactional buffer, and save sequence

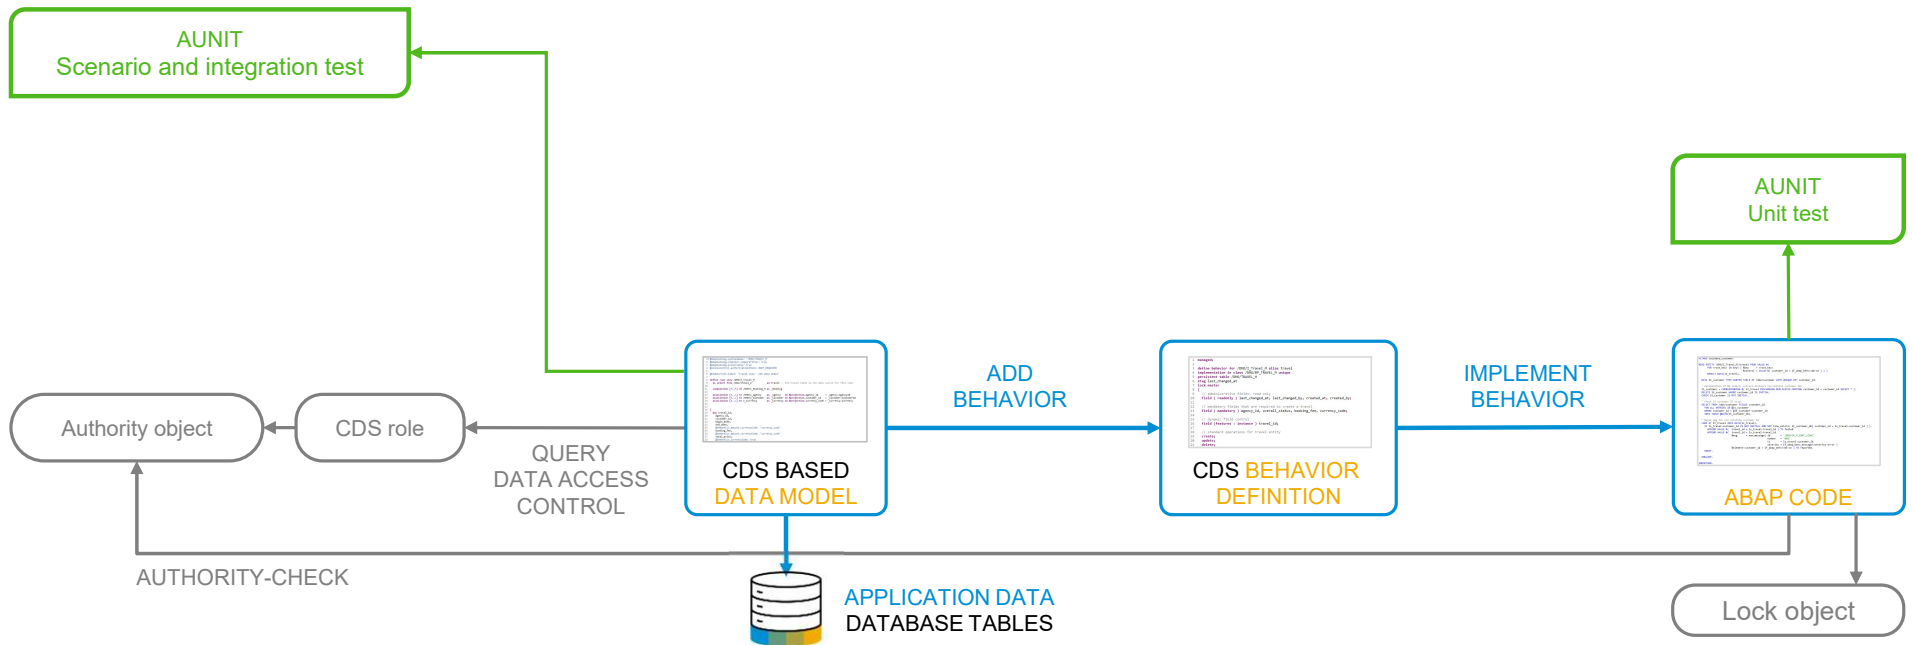

- Developers in charge of BO runtime: CRUD operations
- Adapters needed to integrate the existing code

MANAGED

For **greenfield developments** with standard implementation
(Opt. unmanaged appl. components: DB tables, lock/PFCG object, update task FM)

- Standard CRUD operations work out of the box
- Developers add BO-specific business logic

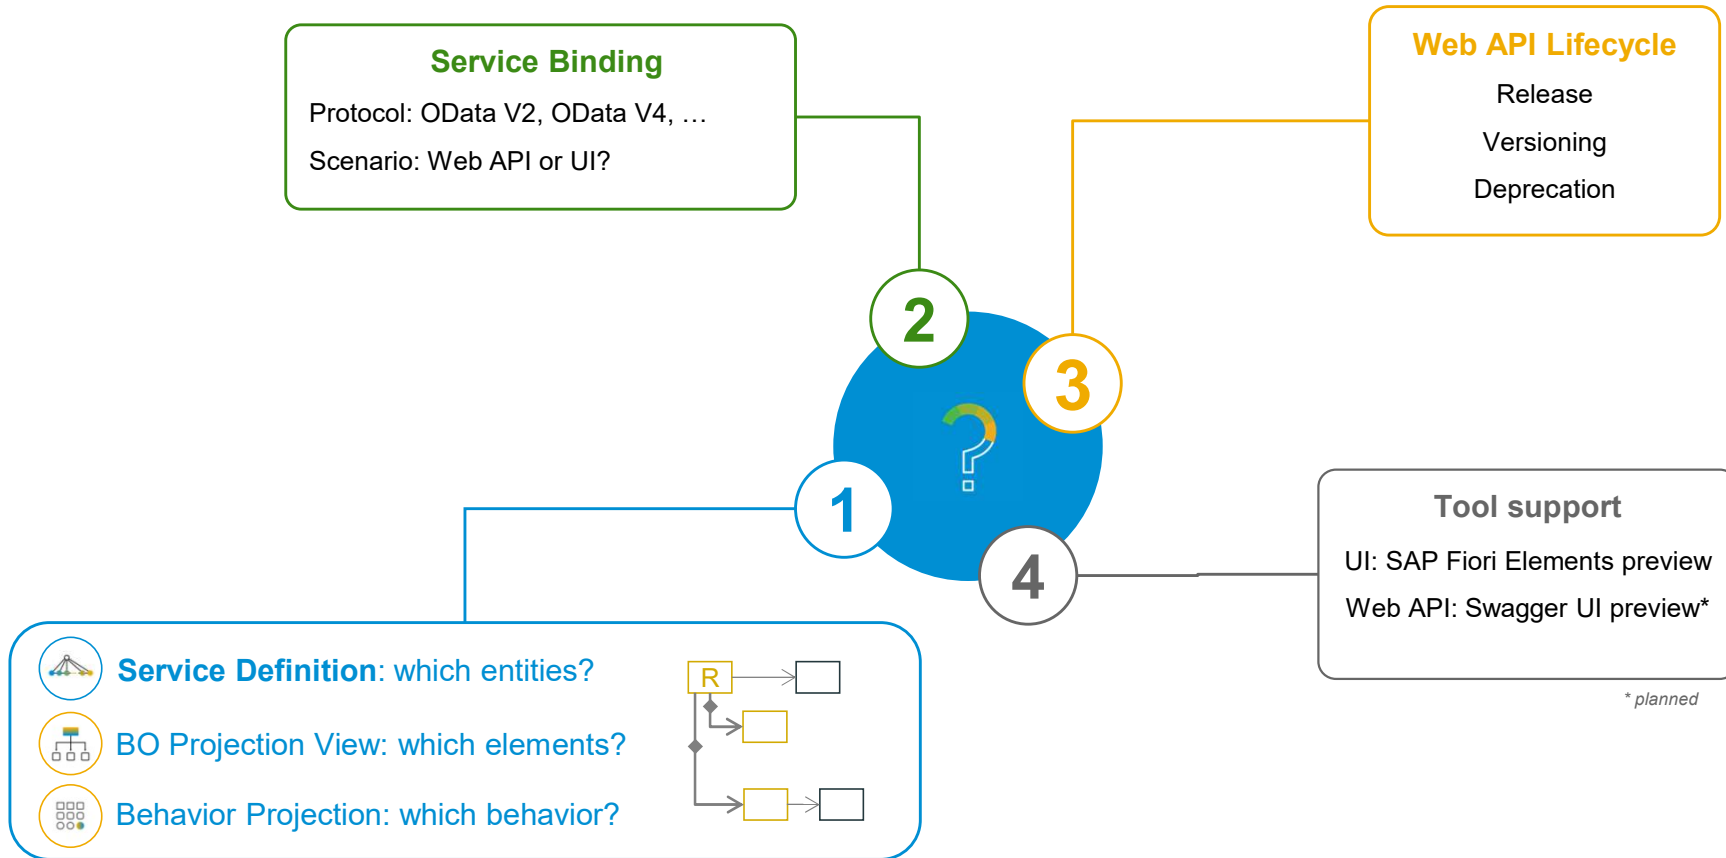

The development flow

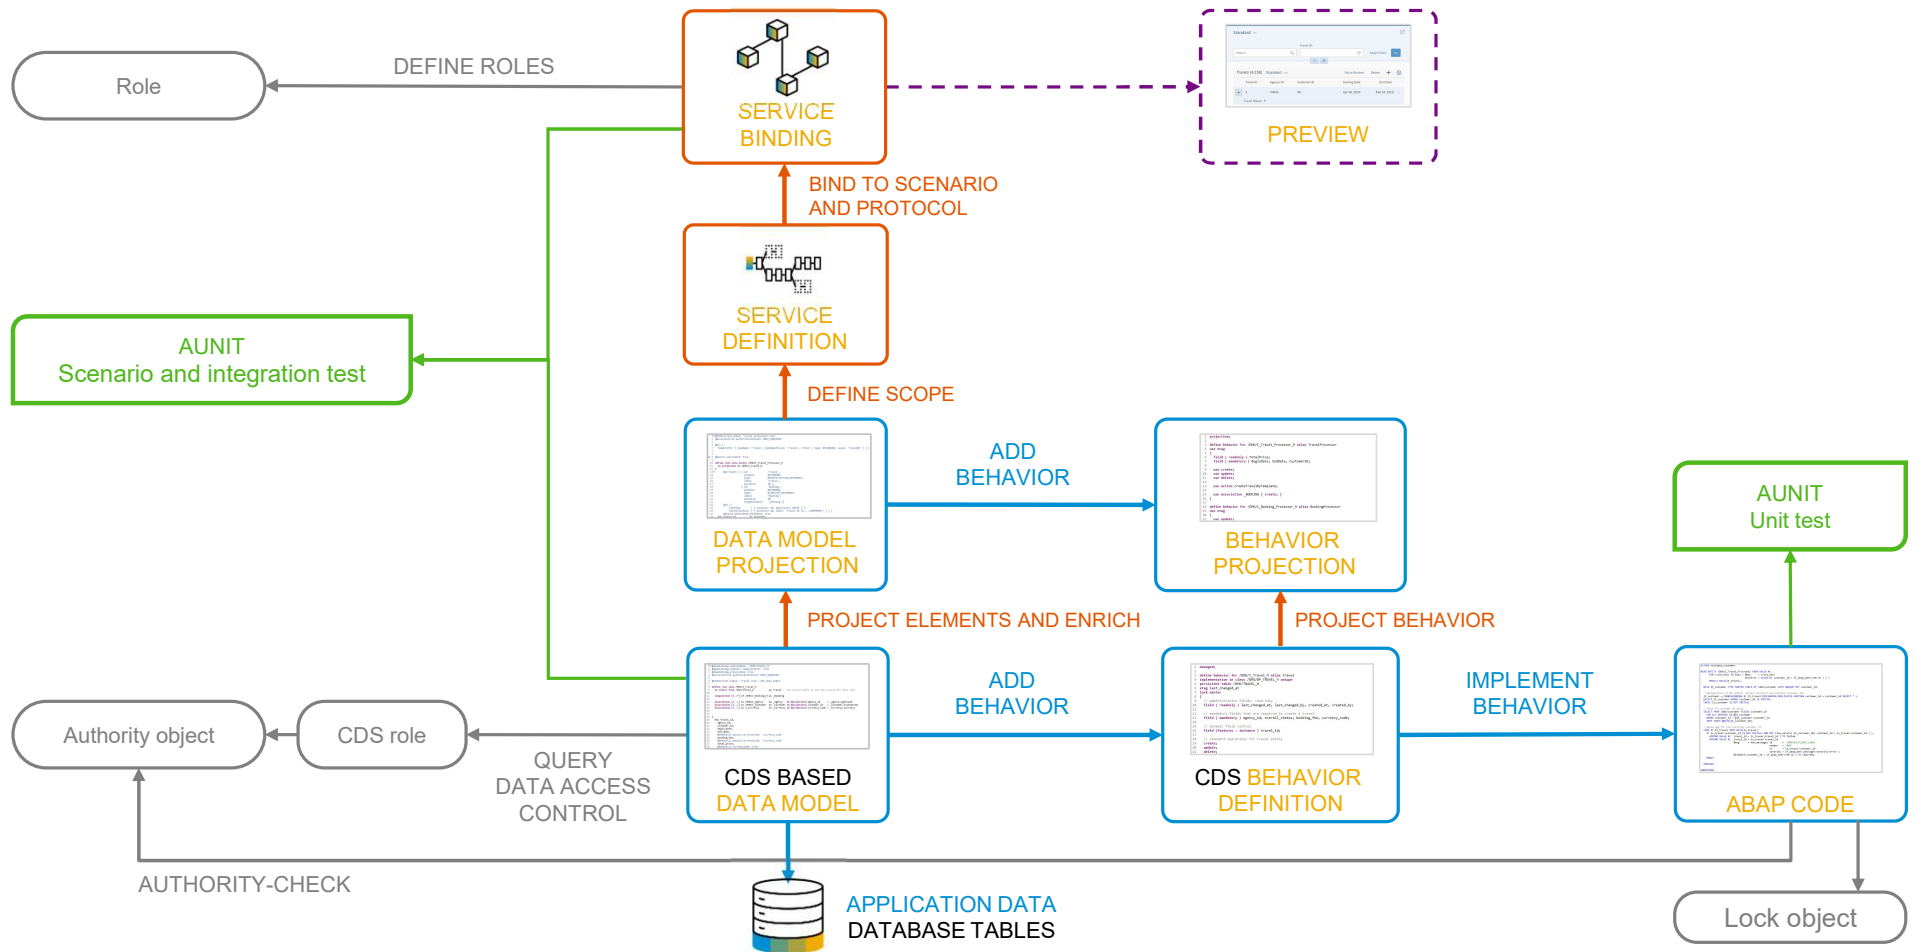

BUSINESS SERVICES

Business service

The development flow

SUMMARY

Key takeaways

The **ABAP RESTful Application Programming Model (RAP)** helps you efficiently and rapidly build enterprise-grade services with built-in cloud qualities.

RAP best support **SAP HANA** and **SAP Fiori elements**.

RAP is available on **SAP BTP ABAP Environment**, **SAP S/4HANA Cloud**, and **SAP S/4HANA** as of edition 1909.

The **RAP feature scope** is enhanced **quarterly** in SAP BTP ABAP Environment, **twice a year** in SAP S/4HANA Cloud ABAP Environment, and **annually** in SAP S/4HANA.

What's New: [SAP BTP ABAP environment](#) | [SAP S/4HANA](#) | [SAP S/4HANA Cloud](#)

What's Next: [ABAP Platform Roadmap Information](#) for all products

Guidance for the usage of RAP in SAP S/4HANA

SAP S/4HANA
1909

FIRST RAP DELIVERY WITH LIMITED FEATURE SET

Managed scenario for greenfield development not supported
No draft support for SAP Fiori development

GUIDANCE

Delivery with SAP S/4HANA 1909

- Use the *ABAP Programming Model for SAP Fiori*

SAP S/4HANA
2020

BASIC RAP DELIVERY

Incl. **managed** scenario (*with major limitations regarding key layout and numbering*)
Draft support for managed or unmanaged BOs to build transactional SAP Fiori apps
OData V4 support for Web APIs and SAP Fiori UIs with FPS01

GUIDANCE

If limitations are crucial
If limitations are not critical

- Use the *ABAP Programming Model for SAP Fiori*
- Use RAP

SAP S/4HANA
≥ 2021

MASS ADOPTION READY RAP DELIVERY

Managed scenario now supports various key layouts
Late numbering for a managed BO (with or without draft)
Enhanced testability, documentability and supportability support
Extensibility options, native **business events** exposure, side effects and more features delivered with **Edition 2022**

GUIDANCE

- Exclusively use RAP

Sample implementations with the ABAP Flight Reference Scenario

Sample Services

The development guides for the ABAP RESTful Application Programming model are based on the sample data from the ABAP Flight Reference Scenario. That means that you can compare the documentation with the productive code that was used to build the documentation scenario. In addition, the ABAP Flight Reference Scenario also includes a demo package with the development objects that are created during the course of the development guides. That means, the whole demo scenario can be downloaded and tested. You obtain full demo services with code built by following conventions and best practices and you can use and reuse the delivered objects for your development.

The following demo scenarios are available for you:

- [Developing Read-Only List Reporting Apps](#) in the package /DMO/FLIGHT_READONLY
- [Developing Unmanaged Transactional Apps](#) in the package /DMO/FLIGHT_UNMANAGED
- [Developing Managed Transactional Apps](#) in the package /DMO/FLIGHT_MANAGED
- [Developing Transactional Apps with Draft Capabilities](#) in the package /DMO/FLIGHT_DRAFT

Legacy Coding

The reference scenario also includes legacy coding. This legacy coding is based on function modules and exemplifies legacy applications that you can include in your new ABAP code. Above all, the legacy coding is relevant for the development guide, that explains how to build a new service on the basis of an existing application. It illustrates how you build an application with the unmanaged implementation type. The legacy coding that is used in this scenario is

- ▾ /DMO/FLIGHT (332) *Flight Reference Scenario*
 - > /DMO/FLIGHT_DRAFT (52) *Flight Reference Scenario: Draft Guide*
 - > /DMO/FLIGHT_LEGACY (128) *Flight Reference Scenario: Legacy Objects*
 - > /DMO/FLIGHT_MANAGED (46) *Flight Reference Scenario: TX managed E2E Guide*
 - > /DMO/FLIGHT_READONLY (7) *Flight Reference Scenario: Read-Only E2E Guide*
 - > /DMO/FLIGHT_REUSE (69) *Flight Reference Scenario: Reused Entities*
 - > /DMO/FLIGHT_UNMANAGED (30) *Flight Reference Scenario: TX unmanaged E2E Guide*

Demonstrate how to use different RAP capabilities concretely

Based on a simple to use and understand data model: SFLIGHT reloaded

Feature scope regularly enhanced
